TYPE "C" CABINET RACKS—for 19″ Rack Panels

These are professional type racks that have been used on many commercial installations, and make a DeLuxe job of any amateur or broadcast transmitter. The racks are of all-steel construction, welded into an integral unit, to give a lifetime of service.

All panel mounting screws are concealed by means of a full length corner trim on each side at the front. In keeping with modern design, this front trim is rounded on the vertical corners. The rear corners are finished with regular angle trim. The front of the rack is trimmed with chrome moulding top and bottom. The door has a grille at top and bottom, and is hung on sturdy loose-joint hinges; it is held closed by two flush snap-action catches. Additional ventilation is provided by louvres at the sides. The panel mounting angle irons are 3/16″ thick, with mounting holes accurately drilled and tapped 12/24 thread on multiple 1¼″—½″ spacings. The rack is made from 1/16″ thick cold rolled steel, rigidly braced and reinforced throughout; the bottom is $\frac{7}{64}$″ thick steel. A rectangular opening is provided in the bottom for conduits, leads, etc. A duplex receptacle and outlet box are provided in the back under the door.

FINISHES: Black ripple with corner trims finished in dull black. Slate grey ripple with corner trims finished in slate grey. Prime coat only is optional in place of ripple enamel finish at no extra cost.

RACKS WITHOUT LOUVRES: To permit racks to be set up in gangs or rows of two or more, the louvres at sides are omitted. Racks may be joined by a flat trim fastened to front of adjacent racks, overlapping both racks. Where specified, front joining trim will be substituted in place of adjacent corner trim at same price. Front joining Trims cannot be used on racks with front doors.

Roller Truck No. RT-415 may be used for all 15¼″ deep racks. Use No. RT-418 for all 18″ deep racks. Standard shelves are available for all racks listed.

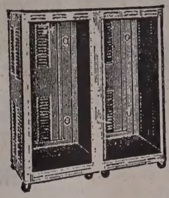
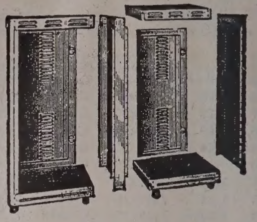
NEW BUD ADD-a-RACK SERIES



It has always been necessary to buy special racks without louvers on one side to obtain a maximum of panel space with a minimum of floor space. Now, you no longer need to buy a whole new cabinet when you want additional panel space. Through our new and exclusive Add-a-Rack series, BUD not only offers additional racks at a lower cost, but provides you with a sturdier, better looking assembly.

The illustration at top shows two Add-a-Rack cabinets assembled together. The illustration below shows the unique and ingenious method of adding a unit to your present equipment. Instead of buying an entire new outfit, you purchase only four parts: (1) a door (2) a top (3) a bottom and (4) an Add-a-Rack coupling-unit. The right (or left) hand side of your present relay rack is removed and replaced by the Add-a-Rack coupling-unit: next, a top and bottom is fastened into place, and the side taken from the first rack is fastened onto the second rack which has been added. Place the additional door into position and you have two racks properly and efficiently coupled together. In the same simple way, more racks can be added at any time and every one will be in a CONTINUOUS ONE-PIECE assembly.



This series is available in two ways. (1) a double unit consisting of two racks and the Add-a-Rack coupling unit, (2) Add-a-Rack unit, consisting of a door, a top, a bottom and an Add-a-Rack coupling-unit. These units are furnished with all necessary assembling and panel mounting hardware.

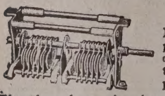
BUD JUNIOR DUAL SECTION CONDENSERS



Rotor contact is made by a four-finger, plated pressure spring placed at the center of the rotor shaft between the two sections, thereby providing perfect balance and improving the high frequency characteristics. The tie-rods are insulated at both ends with Steatite insulators to prevent inductive loops in condenser frame. All other constructional features and materials are the same as used on Junior single section condenser.

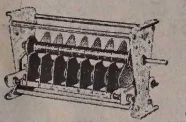
BUD GIANT TRANSMITTER CONDENSER—SINGLE SECTION



Modern design, plus precision production methods, makes BUD GIANT TRANSMITTER CONDENSERS the first choice of critical engineers for use in such applications as broadcast transmitters, high-power trans-oceanic communications equipment, and many other types of highly specialized electronic devices.

BUD GIANT TRANSMITTER CONDENSERS are built with a sturdy frame consisting of 3/16″ thick aluminum end plates, connected by 5/8″ diameter duraluminum rods. Formed brackets at top and bottom of end plates provide for mounting these units, and permit placing of associated inductances directly on the condenser.

Rotor and stator plates are accurately stamped from 0.064″ thick highly polished aluminum with all edges rounded to minimize corona loss and danger of peak-voltage flash-over. The plates are separated by accurately machined duraluminum spacers that insure a constant air-gap throughout the entire length of the condenser.

The large two-finger rotor-contact spring, made from plated spring brass, assures positive contact with noise-free operation. Steatite bars insulate the stator, and are placed well outside the electrostatic field to keep dielectric losses at a minimum.

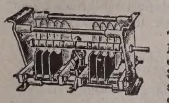
BUD GIANT TRANSMITTER CONDENSERS—DUAL SECTION



These GIANT DUAL-SECTION TRANSMITTER CONDENSERS compare in quality with the GIANT SINGLE-SECTION TUNING CONDENSERS described above, and have the same general constructional features. Insulated tie-rods in these split-stator units eliminate closed loops in the frame.

The rotor-contact consists of four fingers made from heavy-plated spring brass, placed in the center of the rotor assembly under heavy spring tension. This construction reduces series resistance and improves the efficiency of the unit at the higher frequencies.

When these dual condensers are used in split-stator circuits, the capacity is reduced to one-half the listed value and the voltage ratings are doubled.

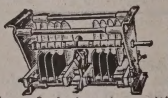
BUD MASTER TRANSMITTING CONDENSERS—Dual Section



While the general style and construction is identical with the single Master units, all tie-rods in this series are insulated by glazed Steatite pillars, thus completely eliminating all closed metallic loops in the condenser frame. A special outstanding feature, developed by BUD engineers, is that of placing the positive double wiping rotor contact between the two sections at the center of the rotor. These features contribute to perfect circuit balance and eliminate the majority of difficulties encountered in ultra-high frequency equipment due to parasitics, circulating currents and poor neutralization. Use BUD condensers throughout and be trouble free.

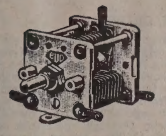
BUD "CE" MIDGET CONDENSERS
SINGLE SECTION DOUBLE BEARING



These Midget Condensers were designed to meet the rigid requirements in design of efficient ultra-high frequency electronic devices and precision laboratory equipment. Brass rotor and stator plate stacks are assembled into permanent units by means of electro-soldering, which assures long life and accurate plate spacing. End-plates of Steatite insulate the mounting bushings and angles from the rotor and stator assemblies. A large front sleeve bearing and rear ball thrust bearing provide for smooth rotation. BUD NEUTRALIZING AND HIGH FREQUENCY TUNING CONDENSERS

This line of condensers will fill every neutralizing and high frequency tuning requirement that modern circuits pose. The two-pillar construction makes this unit unusually sturdy and eliminates any possibility of capacity variation due to vibration. The movable plate is adjusted by means of the threaded shaft to which it is attached, and it is permanently locked in any position by the lock-nut provided. Any loose thread is taken up by a special nut and locked to give smooth operation. All metal parts are of aluminum. Plates have rounded edges. Steatite insulation is used.

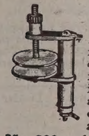
BUD FEED-THROUGH AND BASE MOUNTED NEUTRALIZING CONDENSERS



In circuits utilizing tubes with the grid lead terminated in the base, feed-through type of neutralizing condenser is particularly suited. One hole is required for mounting of feed-through condensers. Neutralizing condenser illustrated in feed-through type. Plates are made of aluminum rounded at edges to cut down losses. After proper tuning is attained, movable plate can be locked with the knurled nut.

No. 890 and No. 852 are ideal neutralizers for popular low power beam tubes. No. 890 condenser is base mounted only.

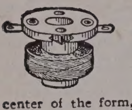
LATTICE WOUND R. F. CHOKES



For all general purpose applications requiring a high quality choke at a reasonable price, this line finds wide acceptance. Each choke is wound from silk-covered enameled copper wire on a white ceramic bobbin. Leads are terminated with two convenient soldering lugs. Chokes can be mounted with a 6-32 screw through the center of the form, and each winding is thoroughly impregnated against moisture. The wide range of sizes fills practically every choke requirement in standard radio circuits. Choke base diameter 1 1/16", distance between ends of leads 1 5/8".

TRANSMITTING CHOKES

Here are two heavy duty R. F. Chokes that can really take it in high powered transmitter plate circuits. Each choke is wound on 9/16" dia. Steatite rod, has connection lugs and a mounting foot.

All chokes have a heavy ceramic coating which prevents moisture absorption and enables them to withstand momentary overloads without collapsing the individual pies.

Consists of five graduated pies wound in continuous winding. Care has been taken to prevent any of the pies from being resonant on an amateur band and to keep the distributed capacity at a minimum. Overall height 3 1/4".

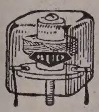
IRON CORE R. F. CHOKES



The efficiency of any circuit requiring an R. F choke will be definitely improved by utilizing one of these chokes with a finely divided molded metallic core. The improved "Q" possible with this construction results from the D. C. resistance of these chokes being from 40 to 50% less for a given inductance than for regular air-core types. Thus, the D. C. voltage drop through the choke is considerably less, yet the choking action is equally as good. Windings are made with silk-covered enameled wire terminated on convenient soldering lugs, and the chokes are mounted in small square shield cans measuring 1 3/8" x 1 3/8" x 1 7/16".

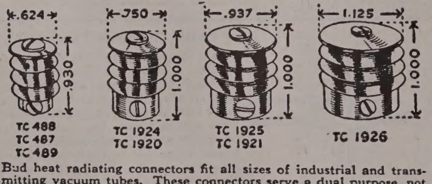
HEAT RADIATING PLATE AND GRID TUBE CONNECTORS



Bud heat radiating connectors fit all sizes of industrial and transmitting vacuum tubes. These connectors serve a dual purpose, not only are they useful to make connections to plate or grid terminals, but they provide a large heat radiating surface that will dissipate heat from the glass seal and tube element.

Eight sizes fit all grid and plate leads and also provide sufficient heat radiation for any tube operating in the range of 50 to 2000 watts. All radiators are machined from special aluminum rod. Edges are rounded to minimize corona loss.

DU MONT ELECTRONIC PARTS FOR TV

DU MONT DEFLECTION YOKES
DISTRIBUTED-WINDING 70° DEFLECTION YOKES
SERIES Y2A

The series Y2A Yoke when properly matched into the horizontal and vertical circuits of a television receiver will sweep any cathode ray tube which has a deflection angle of 70° or less.

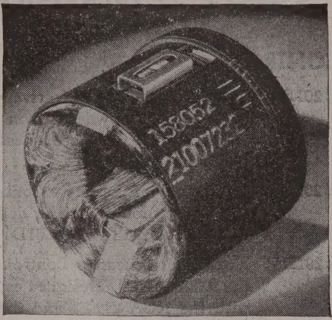
Because of the unusual winding technique, full sharp focus is insured, and the overall length is held to 2¾″.

The horizontal inductance is 10.5 mh and the vertical inductance is 42.0 mh.

The following types are available:

- **Y2A1** — 70° Deflection Yoke with 560 ohm resistors, 51 mmf capacitor and leads. For use with transformer type circuits.
- **Y2A2** — Same as Y2A1 but without components and leads.
- **Y2A5** — Same as Y2A1 but wired for autotransformer type circuits.
- **Y2A3** — Same as Y2A5 but without components and leads.

Lead length is 13″ minimum.



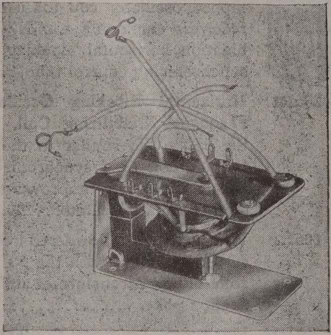
Instruction sheet included with each yoke.

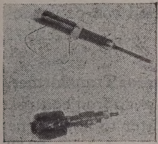
DU MONT TYPE H1A1 HORIZONTAL DEFLECTION AND HIGH-VOLTAGE TRANSFORMER

The type H1A1 Horizontal Output Transformer lends itself ideally for conversion of 10″ and 12″ television receivers to the large screen tubes. It is capable of supplying between 12 and 13 kilovolts to the anode of a 70° picture tube with the use of only one driver tube and one high voltage rectifier tube.

A ferrite core keeps the unit small in size and light in weight with the utmost of efficiency.

A universal mounting bracket allows it to be mounted on either its side or its bottom. The mounting holes are for a #8 self-tapping screw.



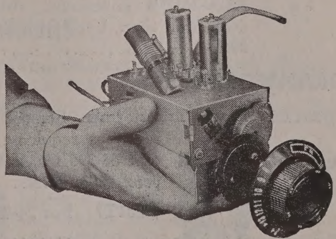


The Horizontal Width Control Coil type W1A1, and the Horizontal Linearity Control Type L1A1 are recommended for use in a horizontal deflection circuit using the Du Mont Horizontal Output Transformer type H1A1, and the Du Mont Deflection Yoke type Y2A1.

	Inductance Max.	Inductance Min.	Resistance Ohms (approx.)
Width Coil W1A1	.230 mh	.050 mh	.75
Linearity Coil L1A1	20 mh	7 mh	36.5

DU MONT INPUTUNER* SERIES T3C

A brand new Du Mont TV-FM r-f tuner combining the dependability of continuous tuning with detent selection of TV channels, resulting in greatly simplified operation. Mechanically and electrically, a direct replacement for most switch-type tuners. Covers all TV channels and FM broadcast band in four turns. Simplified dials enhance appearance and make tuning easy. Incorporates Mallory-Ware 3-gang spiral Inductuner** plus antenna tuning, providing full, four-section performance without extending physical length of chassis. Utilizes a 6BC5 or 6BC6 pentode rf stage with tuned input to provide maximum sensitivity. R-f stage is over-coupled to 6J6 mixer-oscillator for wide band-pass. Mixer plate network will match i.f. system of most TV chassis. Antenna input — 300 ohm. Ready to install. Installation instructions included with each Inputuner.



- **T3C1**—Inputuner aligned for sound center i.f. of 21.25 mcs. with detent and sound take-off. Includes tubes, dial and knob.
- **T3C2**—Same as T3C1 except sound center i.f. of 21.75 mc.
- **T3C3**—Same as T3C1 but without sound take-off
- **T3C4**—Same as T3C2 but without sound take-off.

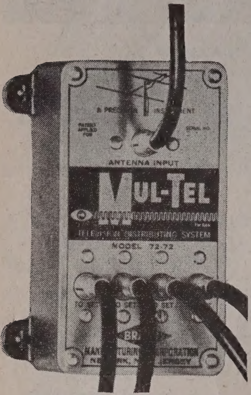
BRACH MFG. CORP. MULTIPLE ANTENNA
INSTALLATION EQUIPMENT

UP TO 16 SETS MAY BE OPERATED
FROM ONE ANTENNA



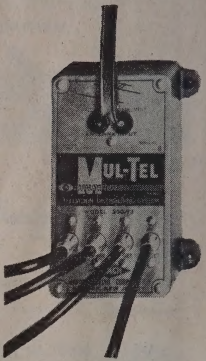
No. 72-72 4-SET COUPLER designed to provide 4-72 ohm coaxial outputs from one 72 ohm coaxial antenna input.

BRACH MUL-TEL MASTER TV-FM ANTENNA SYSTEM

The Mul-Tel System is designed to operate 2 to 16 Television Sets from one common TV Antenna . . . The system discriminates against I.F. interference as it will pass only those frequencies in the TV band from 50-230 megacycles . . . The range of application for the Brach Mul-Tel System is virtually limitless . . . It is ideal for garden type apartment houses or other multiple dwellings, and for extra television outlets in the home . . . It is eminently suitable for multi-room restaurants, taverns and clubs which operate several TV sets on the premises . . . In suburban areas, it supplies the simplest and most satisfactory method of TV distribution for smaller dwellings and two-family houses.

Brach Mul-Tel provides the dealer with the outstanding advantage of being able to demonstrate up to sixteen TV sets simultaneously from one roof antenna, with uniform signal to each receiver.

No. 72-72 4-Set Coupler—List Price	**$19.75**
No. 300-72 4-Set Coupler—List Price	**19.75**

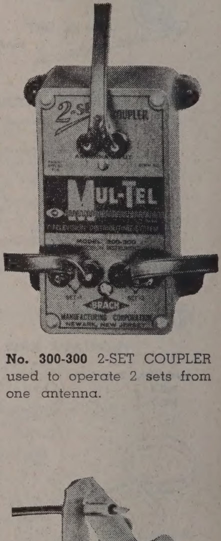


No. 300-72 4-SET COUPLER designed to provide 4-72 ohm coaxial outputs from one 300 ohm antenna input.

No. 72-300A 72 to 300 OHM MATCHING TRANSFORMER for use with Part No. 72-72 and 300-72.

TRANSFORMER (No. 72-300A) is designed to be a perfect termination at Channels 2-13. It also has a high pass filter action and may be used in interference areas to reduce diathermy and other I.F. interference. A coaxial fitting is provided with transformer #72-300A to make a low loss connection to RG59/U. It has negligible loss over the complete TV band and a voltage gain of 2:1. Recommended for all coaxial line installations with individual antennas in noisy and heavy interference areas and as a TV Set Matching Transformer in conjunction with the Brach Mul-Tel System.

List Price	**$3.45**



No. 300-300 2-SET COUPLER used to operate 2 sets from one antenna.

2-SET COUPLER INPUT (No. 300-300) receives its signals from one antenna which may use 75 or 300 Ohm Down-lead. The signals are filtered of I.F. interference and divided into two outputs which may, by proper connection, be circuited to either 75 or 300 Ohm TV receivers. More than 20 d.b. of isolation to local oscillator radiation is realized between receivers with the 2-Set Coupler. The 2-Set Coupler has complete isolation in regard to loading effects. A defective connection to either receiver will not affect the operation of the other receiver connected to the 2-Set Coupler. This unit functions on the "Berger Effect" principle as do all other Mul-Tel Units.

List Price	**$14.95**

The new 2-Stage version of the famous ANCHOR-TV BOOSTERS is recommended by a national research organization. The ANCHOR 2-Stage Pre-amplifier will increase original TV signal strength five times.

This unit incorporates many new engineering features which include a radically new switching method of tube and circuit components in RF stage (Pat. Pend.) through which maximum gain and bandwidths are achieved. Single knob control for tuning and switching (Pat. Pend.) make this unit outstanding in simplicity and ease of operaton. No other adjustments are necessary. It reduces interference to a minimum and increases signal strength for excellent pictures and greater contrast on all channels (as shown in charts), especially effective in "fringe" areas — provides good reception in locations formerly considered unsatisfactory.

Exclusive simultaneous iron core tuning of input and output circuits results in uniform response on all channels. Reduces interference caused by AM, FM, short wave or Amateur Stations, as well as interchannel interference in strong signal areas. Cleans up noise and "snow" patterns — permits good reception from an indoor antenna in normal service areas. Most stable non-regenerative unit available—it is the unit that is not returned. ANCHOR 2-STAGE BOOSTER is ideal for show room demonstration permitting operation of several sets at one time using separate indoor antennas instead of outdoor antennas. For 300-ohm lines. Modernly styled with streamlined plastic escutcheon and soft mahogany leatherette finish. Illuminated Pointer Size, 4⅛ x 8⅜ x 4¼. With 2-6AK5 tubes and selenium rectifier. Complete instructions supplied. For 105-125 volts. 50-60 cycles. Shipping weight, 6 lbs. ARC-101-100

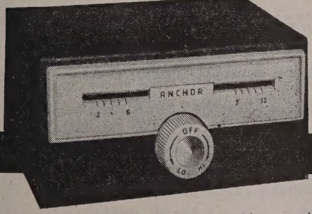
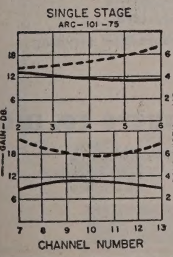
In 1949 the ANCHOR Single-Stage BOOSTER improved television reception for 1 out of every 4 TV Set Owners. Thousands of apartment dwellers, suburban and fringe area residents the nation over demonstrated their preference by making ANCHOR the Number One BOOSTER in sets sold. ANCHOR developed this recognition only through its own top-notch performance by being able to deliver sharp, snow-free pictures under most difficult conditions.

Now ANCHOR has added the new Two-Stage BOOSTER and vastly improved Single-Stage BOOSTER to their line to bring television, and the finest television reception, to everyone. The New ANCHOR Pre-Amplifier Will Out-perform Any Two-Stage BOOSTER on the market.



Model ARC-101-75—SINGLE-STAGE BOOSTER



This new ANCHOR Single-Stage BOOSTER incorporates all of the features of the Two-Stage Model ARC-101-100. The outside case is changed slightly to differentiate one from the other. It is modernly styled with streamlined plastic escutcheon and soft mahogany leatherette finish. This unit is manufactured to take the place of the original ARC-101-50 and is competitively priced. It will outperform any other Single-Stage BOOSTER on the market as well as some Two-Stage BOOSTERS. This Single-Stage unit greatly reduces interference and increases the original signal strength approximately 3 times (as shown in charts) for excellent pictures and sharp definition on all channels. It is especially recommended for low signal areas nearer cities where there may be any number of interference problems. Size, 4⅛ x 8⅜ x 4¾". With 1-6AK5 tube and selenium rectifier. For 100-125 volts, 50-60 cycles. Shipping weight, 5½ lbs.

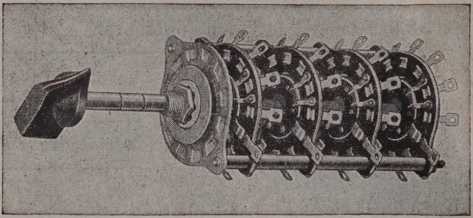
MALLORY ROTARY SWITCHES



Multi-Section Rotary Switches

APPLICATION—Ideally suited for test equipment, meter switching, and low current switching in industrial applications, including machine tool equipment. Also miscellaneous electronic devices, such as medical equipment, navigation instruments, and radar.

DESCRIPTION—All contacting members are heavily silver plated. This insures low contact resistance. The high lift of the contact springs provides a wiping and self-cleaning action to insure good electrical contact. The index spring, made of durable special alloy reinforced with web, prevents fracture failure and insures long-life operation.

An adjustable stop feature permits selection of the desired number of positions for extremely flexible use. The insulation used in all sections is high-grade phenolic resin. All switches supplied with ⅜″ diameter, ⅜″ long bushing, and ¼″ x 2″ long shaft, grooved for easy cutting at popular lengths.

All switches have ½″ spacing between sections, excepting the three and four-section, which have 1″ spacing. If closer spacing is required between sections, the switch can be dis-assembled and spacers cut to proper length.

ACCESSORIES—One Mallory No. 366 knob, one No. 232 nut, and one No. 227 lock washer furnished with each switch. See Page 11, Mallory Miscellaneous Items section, of this catalog for Dial Plates.

PACKAGING—One switch and accessories per display carton.

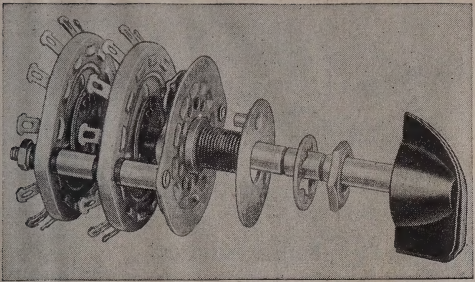
MALLORY SELECTOR, TAP AND LEVER ACTION SWITCHES



Ceramic Section Selector Switches

APPLICATION—These switches are ideal for highly efficient critical radio frequency circuit applications. Suitable for radio receivers and low-power transmitter circuits. They find widespread use in laboratories, by manufacturers of transmitters, receivers, test equipment and other electronic apparatus, and by experimenters and amateurs.

DESCRIPTION—Ceramic insulation minimizes RF losses and retards moisture absorption. Indexing mechanism is the "hill-and-valley" type providing a definite "snap" indexing action. An adjustable stop feature is designed into the index assembly to permit a choice of 2 to 11 positions. All current-carrying parts are heavily silver-plated. The contacts are of the double-wiping, self-cleaning type, which insures low contact resistance over an extended temperature range. All switches supplied with ⅜" diameter, ⅜" long bushing and ¼" x 2" long shaft grooved for easy cutting at popular lengths. All types non-shorting.

The two-section switch has ½" spacing between sections. The three-section switch has 1" spacing.

Lever Action Switches

APPLICATION—These switches are particularly adapted to centralized radio, sound distribution, public address equipment, and intercommunication equipment for school installations of loudspeaker systems and office communication systems.

DESCRIPTION—The housing and mounting bracket of these switches are one integral part, which assures rigidity, and the design lends itself to the support of the section, thus preventing warping of the section or distortion in alignment of contacts. A smooth contact surface is guaranteed by the use of the exclusive Mallory "wrap-around" method of securing the terminal through the holes in the phenolic resin section. The phenolic resin is high grade for maximum insulation. The 5000 series have elongated mounting holes in the bracket, spaced from $2\frac{3}{16}$" to 2⅜" apart. The 6000 and 7000 series have mounting brackets with round holes spaced 1⅝" apart. Switches may be mounted singly or grouped in multiple mounting with ¾" between lever arm centers to facilitate conventional rack and panel installations.

ACCESSORIES—One knob, two 6-32 bolts and nuts are furnished with each switch.

PACKAGING—One switch and accessories per display carton.

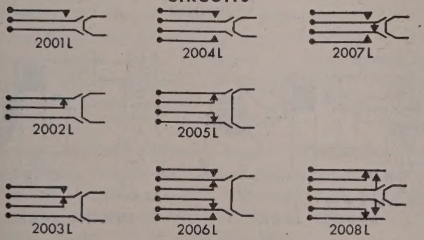
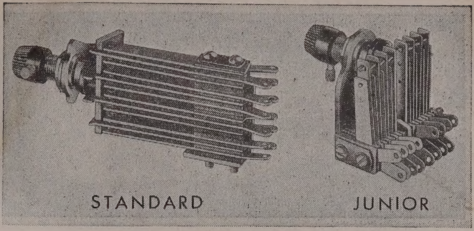
CIRCUITS





Jack Switches

APPLICATION—Ideally suited for use in laboratories, test panels, meter circuits, and other equipment where variable circuit combinations are accomplished through the leaf spring type assembly.

DESCRIPTION—The Standard Jack (or long frame type) may be used where space is no factor, as the frame extends straight back from panel mounting. The spring stack is assembled on a horizontal line with the frame. Constructed with shaft that rotates through the bushing, operating a cam to actuate the spring which accomplishes the circuit switching.

The Junior Jack (or short frame type) is made with the frame supporting the spring stack at right angles. Because of the short springs used, it requires a minimum of space for mounting. The actuation of the springs is the same as for the Standard Switch. Frames on both Standard and Junior types are cadmium plated. Bushings and special alloy springs are nickel plated. The fine silver contacts insure good electrical and low resistance contact. Both switch types are suitable for mounting in a single hole 7/16″ diameter on panels up to ¼″ thick. Furnished with ¼″ flatted shaft.

ACCESSORIES—One mounting nut, and one washer furnished with each switch. Knobs suitable for these switches shown on page 11, Mallory Special Components Section, of this catalog.

PACKAGING—One switch per display carton.

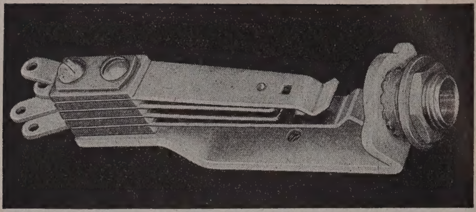
MALLORY JACKS



Jacks

APPLICATION—These jacks provide a conventional receptacle where it is desirable to open or close auxiliary circuits by use of a combination of spring assemblies actuated by insertion of connection plugs. Excellent for head sets, hand sets, or microphone cord and plug connections, for meter testing cord and plug connections, or as a receptacle for any device where desirable to connect or disconnect by cord and plug. Fit all Mallory #75 and 76 plugs.

DESCRIPTION—The long frame jacks are provided with a variety of spring combinations. The spring stackups are mounted horizontally to the frame. The jack is designed to mount in a single 7/16″ hole in panels up to 1/4″ thick. Fits all standard Mallory plugs of two and three conductor types.

The Junior Jack (sometimes called "short frame" jack) is made with the frame supporting the spring stack at a right angle with the short springs requiring only 1 5/16″ space back of panel for mounting. Bushings are made to mount in single 7/16″ diameter holes in panels up to 1/4″ thick. Fits all standard Mallory plugs.

The Midget Jack is very compact (with shorter frame and springs than the Junior types), being extremely useful where bare minimums of space exist. Will mount in a single 7/16″ diameter hole in panels up to 1/4″ thick.

The Infant Jack (sometimes referred to as a "pup" jack) is the smallest single circuit jack manufactured to accommodate the conventional 2-way phone plug tip and sleeve connection.

All jacks are made with cadmium-plated frames. Bushings and special alloy springs are nickel plated. Fine silver contacts provide a jack with excellent electrical contact and low-contact resistance.

ACCESSORIES—One mounting nut and one washer furnished with each long frame Junior and A-1 (Infant) Jack. Two nuts and one washer furnished with all Midget Jacks.

PACKAGING—One switch and accessories per display carton.

APPLICATION—Ideal for telephone switchboard types of applications, as well as industrial applications where a more compact jack is required for close strip panel mounting.

DESCRIPTION—Although limited to three circuit combinations, these jacks serve the same purpose as the Mallory Standard Long Frame Jacks, but employ a special frame angle to provide greater support. The bushing is plain, unthreaded, and the jack is mounted by means of a screw through the panel mounting plate at the base of the bushing. Bushing fits all standard Mallory plugs of two and three conductor types. The springs are assembled horizontally to the frame. The frames are steel cadmium plated. Bushings and special alloy springs are nickel plated. The fine silver contacts provide an excellent electrical contact and low contact resistance.

ACCESSORIES—One mounting nut and one special washer furnished with each SC Jack.

PACKAGING—One jack per display carton.

SMALL SWITCHES, LIMIT SWITCHES, AND MAGNETIC RELAYS

SMALL SNAP-ACTION SWITCH, G-E SWITCHETTE CR1070

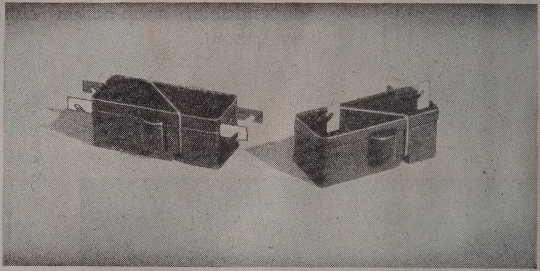
This new, lightweight switch mechanism lends itself especially to applications where space is limited and long life is required.

The Switchette is operated by movement of the spring-return button located in the housing. This button can be actuated by a lever, bellows, or other means. Snap-action, double-break-contact construction gives the G-E Switchette a high current rating and makes it suitable for applications where the vibration is severe.

FEATURES AND ADVANTAGES

1. Small (approximately 1¼ in. by ½ in. by ½ in.) and weighs only 9 grams (0.02 lb).
2. Resists vibration and corrosion.
3. Phenolic-resin operating button provides protection from live parts during operation.
4. Contact tips are 99.95 per cent pure silver.
5. Particularly suited to electronic applications because of negligible amount of contact bounce.
6. Five terminal arrangements are available, including the two shown above.
7. Wide variety of forms available, for example, three basic contact arrangements: single-circuit, normally open; single-circuit, normally closed; and two-circuit, normally open and normally closed. Also many special forms.

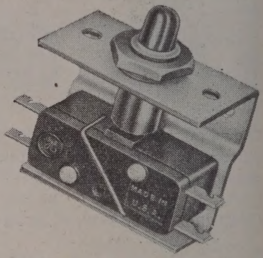
Switchettes are available in ratings up to 10 amperes at 115 or 230 volts a-c. Write for Bulletin GEA-4888.



Switchettes showing two terminal arrangements

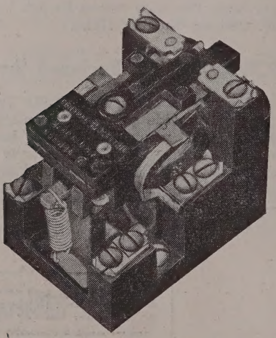
LIMIT SWITCH, CR1070-D112

This sturdy, open-type limit switch is operated by a plunger which provides $\frac{7}{32}$-inch overtravel. The contact mechanism of this device is the G-E Switchette, which can be wired to control one normally open circuit and one normally closed circuit. Rated 10 amperes at 230 volts a-c. Write for Bulletin GEC-197.



Open-type limit switch with push-rod operation

GENERAL PURPOSE RELAY, CR2790-E



The CR2790 relay is a compact, attractively finished device for use either as a motor starter or a relaying unit. Available in either an open form or enclosed in a general-purpose or explosion-proof housing. Three contact arrangements available: single-pole, single-throw; double-pole, single-throw; and double-pole, double-throw. In the open form, all three contact arrangements use the same base, which facilitates mounting. In the enclosed form, the U-shaped cover makes wiring and servicing convenient. Rated 10 amp. continuous, 110/120 volts a-c.

Applications

Control of pilot circuits in response to remote control switch or thermostat, or for direct control of small motors.

As a fractional-horsepower motor starter, or in conjunction with a magnetic switch controlling larger motors, heating or lighting circuits, and signal systems. Bulletin GEC—257.

The newly developed electronic photo flash units using a high voltage discharge through a xenon gas filled bulb require a relay of extraordinary characteristics. When the bulb is flashed the contacts must carry an extremely high surge of current without sticking, burning or pitting. The repetitive accuracy must be as uniform as a precision built shutter on a fine camera. Unfailing positive contact is vital to synchronization of the shutter with the 2500 volt capacitor discharge.

The Potter and Brumfield FR relay has been tried and proven under the most severe conditions of temperature, humidity and shock. Special contact material and the finest quality of baked varnish impregnation of coil and other insulating parts combine to give a reliable relay at economy prices. The FR is available in all the contact combinations listed under the MR Series shown on this page up to and including Double Pole Double Throw. Coils are available in all AC voltages up to 230 volts and DC voltages up to 115. Power requirements for coil operation is 1.5 to 2 watts DC and 3 to 4 volt amperes AC. Overall dimensions for single pole types are 2-15/16″ x 1½″ x 1⅝″ high. Double pole types 2¾″ x 2⅛″ x 1⅞″ high.

Stack insulation, laminated phenolic . . . .Vibration and shock resistance to better than 10G with minimnm of 1.5 watts in coil.

SEALED—Hermetically sealed against all environment conditions extends relay life indefinitely. This deep drawn enclosure housing either of the relays described in the columns below gives the smallest multiple contact assembly available. Occupies only 1″ x 1 11/16″ chassis space. The base is solder sealed to the housing. The kovar solder terminals are fused into the glass header which has a minimum leakage resistance of 10,000 megohms at 50% humidity and will stand extremely high thermal shock. Hermetically sealed relays are desiccated at high temperature and sealed in one atmosphere of dry nitrogen, which eliminates oxidation and reduces contact arcing. Housing finish hot tin dipped. Mounting 3 6/32 studs on ½″ x 1¼″ centers.

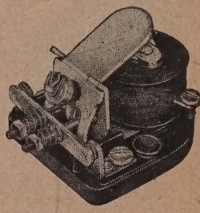
MS Series—MOTOR STARTING RELAYS



MS is ideally suited for use with hermetically sealed motors to avoid complete dismantle for repair of centrifugal switches, or in applications requiring explosion-proof motors. Voltage controlled relay insures throw-out of the starting winding when motor reaches rated speed regardless of the load on the motor. May be remotely located or totally enclosed for operation in corrosive or combustible atmosphere.

Pull-in voltage of MS can be varied over a wide range by adjusting armature gap. Unusual design permits an exceptionally wide differential between pull-in and drop-out voltages. Available with either an 800 ohm coil for operation with a 115 volt, 60 cycle motor or a 2100 ohm coil for operation with a 230 volt, 60 cycle motor. Normal adjustment for 115 volt motor is to pull in at 140 volts and release at 40 volts or less. For the 230 volt motor normal adjustment is to pull in at 255 volts and release at 80 volts or less.

MS2A single break relay is designed for capacitor start, induction run motors up to and including ¾ HP. Available for 115 volt or 230 volt motors or other voltages on request.

MS4A double break relay is designed with special high current contacts for use on capacitor start motors up to 3 HP. MS4A equipped with silver-cadmium oxide contacts.

Approximate size of MS4A is 2¾″ x 2-1/16″ x 1⅞″ high.

Average power for AC types is 3 to 4 V. amperes. Contacts supplied are 3/16″ diameter fine silver. Rating is 8 amperes on double break and 5 amperes on single break at 115 volts, 60 cycle non-inductive load. Minimum contact pressure 25 grams. Approximate size of SP11 is 2-13/32″ x 1⅝″ x 2-21/32″ high. When ordering specify coil voltage and frequency.

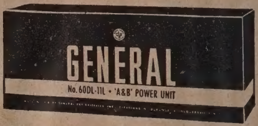
be sure with GENERAL DRY BATTERIES

GENERAL dry batteries contain many outstanding advancements such as extra heavy seamless extruded zinc cups, the famous paper thin separator permitting more mix and more active zinc area by utilization of the cell bottom, the curled rim lock seal which seals each cell individually. These features, found only in Generals, assure long shelf life as well as the maximum in dry battery performance.

GENERAL A & B RADIO FARM PACKS



General A-B packs are made with L size cells in the A section. These cells are 40% longer than the largest conventional 1¼" diameter cell. This construction assures the perfect balance between these "A" and "B" sections for current drains established by the Radio Industry.

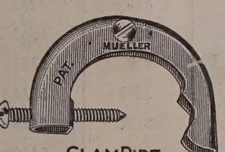
CLAMPIPE GROUND CLAMP



CLAMPIPE
U.S. PATENT No. 1,794,976

No. 58

The exclusive patented feature of a U-shaped cross section in combination with a U-shaped clamp gives a rigidity and effectiveness to the ClamPipe that cannot be found in any other make.

The ClamPipe will not bend or lop over when applied to a pipe. The point of the large case hardened screw, cuts through rust, paint or corrosion into clean, fresh metal, insuring a good contact. The Clamp may be installed on a pipe lying flush against a wall. Will not spread open.

The best ground clamp value on the market. **Applicable to pipe ⅜″ to 1⅜″ outside diameter.**

NOTE 2. To make this substitution the six-prong socket must be changed to a 4-prong UX base socket and wired to match base diagram 8, page 3.

● Use the Mallory 6VT1 Vibrator Tester for direct readings on "good-bad" conditions of doubtful vibrators. For complete description and illustration of the 6VT1 see page 9, Mallory Special Components section, of this catalog.

MALLORY VIBRATORS

These Mallory Vibrators Meet 90% of Your Replacement Needs

● The 12 basic vibrator types listed at right cover 90% of your replacement needs. The entire line of Mallory Vibrators has been simplified so that replacements can be made easily and quickly. By effecting substitutions, Mallory is materially reducing the number of vibrators needed to meet your requirements.

This Mallory standardization program means that your distributor stocks fewer vibrator types and more units of each—thus delivery is tremendously speeded up.

The vibrator replacement problem is being simplified but Mallory quality remains the same. Mallory precision vibrators, backed by years of outstanding performance, still offer the dependability, the long life and the trouble-free service that you and your customers expect. It pays to insist on Mallory Approved Precision Products.

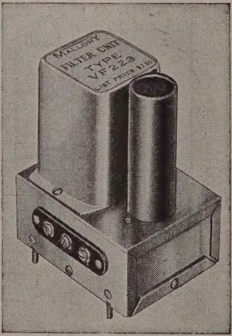
Type VF-223 Audio Filter

● A complete audio filter system for use with all single-unit Vibrapacks. Designed to give maximum suppression of hum with minimum voltage drop. Especially recommended for applications which are sensitive to hum, or where voltage regulation is important as in Class "B" audio amplifiers.

* REG. U. S. PAT. OFF.



NOISE SUPPRESSION

● Vibrapacks are equipped with built-in noise suppression equipment. Type VP-555 also includes an efficient low-frequency hum filter. Type VP-557 incorporates the first input filter condenser only. Other Vibrapacks do not include the high-voltage hum filter. High-voltage filter requirements are similar to equivalent AC power packs.

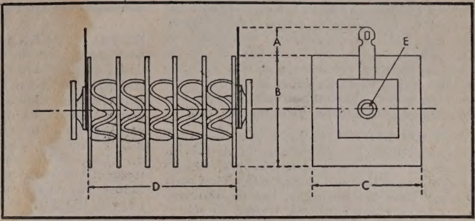
DIMENSIONS



SELENIUM RECTIFIERS

APPLICATION—Mallory Selenium dry disc metallic rectifiers were designed for use in radio, TV and electronic power supplies as replacement for original equipment components, as more efficient substitutes for tube rectifiers, or for use when building new apparatus.

DESCRIPTION—Mallory Selenium rectifiers are made carefully to controlled standards of quality and from design specifications of proven reliability. Compactness, rugged metal construction and improved temperature dissipation make them well suited for direct replacement in radio, television, and electronic equipment. A choice of stud or conventional machine screw mounting makes them universally adaptable for practically all replacement requirements.

Each rectifier is equipped with an accessory "positioning plate" which may be employed to prevent random rotation of the rectifier on its mounting screw or stud. This plate is adjusted easily and quickly to permit accurate positioning of the rectifier in 90° steps around its axis.

The rectifier is labelled clearly with a descriptive part number which automatically announces the DC output rating of the rectifier in milliamperes. Plate polarity is identified by colored edges on the phenolic end piece, and also by conventional schematic markings.

The maximum RMS input is 130 volts with a peak inverse voltage of 380 volts. Approximate voltage drop is 5 volts. May be operated up to but not exceeding 85°C. Stack Temperature.

MOUNTING—May be mounted in any position, however, adequate ventilation should be provided and care exercised to avoid plates touching equipment chassis or other conductors. All rectifiers excepting Catalog No. 6S35 may be mounted by means of a No. 8 machine screw or the spiral self-tapping stud provided. Catalog No. 6S35 has phenolic case with mounting bracket and solder lugs.

PACKAGING—Individual display carton.

P.R. MALLORY & CO. Inc. MALLORY MAGNESIUM-COPPER SULFIDE RECTIFIERS

●

APPLICATION—Mallory Magnesium-Copper Sulfide Rectifiers are time-tried and proved to be the most rugged, dependable rectifiers for those applications requiring low DC voltages at medium and high currents such as battery chargers and eliminators, electroplating, motion picture projector arcs, welding, engine starting, circuit breaker reclosing, solenoid and relays operation, etc.

DESCRIPTION—Mallory Magnesium-Copper Sulfide Rectifiers are all metal in construction, ruggedly assembled under high pressure to withstand severe vibrations and shock. There are no bulbs, liquids, moving parts or sparking contacts. Unlike all other types of rectifiers, they contain no temperature-sensitive films or layers, and have phenomenal ability to withstand abuse and extremes of temperature (—90° to +265°F.). Constant output without circuit adjustments is assured over many years of useful life. Should an accidental voltage surge occur, the rectifying film will "self-heal."

SCOPE AND SIZES—Many sizes are available to supply low DC voltages from watts to kilowatts. A new rectifier engineering data folder is available upon request, covering other sizes for single phase and three phase applications, both convection and fan cooled. In addition to rectifier stacks, P. R. Mallory & Co., Inc. also manufacture a complete line of Rectoplaters (distributed exclusively by the Udylite Corporation, 1651 East Grand Boulevard, Detroit 11, Michigan), Rectotruck Chargers (industrial electric truck chargers available through truck agents).

REPLACEMENT RECTIFIERS—The Mallory Magnesium-Copper Sulfide Rectifiers listed on page 8 are only those popular sizes regularly carried in stock, principally for replacement purposes. These same rectifiers, however, may be used for numerous other applications. For example, the IB8R and IB12R rectifiers are ideal for reversing the direction of HO and O gauge model train locomotives respectively, using wound field motors (as illustrated in the wiring diagram, page 8). IB12C1J, IS16CB7, and IS16B9 rectifiers may be readily used to assemble tapering battery chargers as illustrated in the wiring diagram. The IS24B9 rectifier may be used to make up a battery eliminator to operate and test modern automobile radio receivers. Other applications immediately suggest themselves, such as electroplating, model and toy train DC power sources, radio filament supplies, chatter-free relay and solenoid operation, electric organ, automotive electrodynamic speaker field supplies, generator fields, telephone and telegraph system power supplies, etc.

MOUNTING—Rectifiers are available in either foot, bolt, or stud mounting, the latter two insulated from mounting means. Refer to note below table, on page 8, for type of mounting on replacement rectifiers.

HARDWARE—Wherever possible or practical, universal mounting hardware is included to assist in the ready replacement of old rectifier types.

PACKAGING—Rectifiers are packed one per display carton.

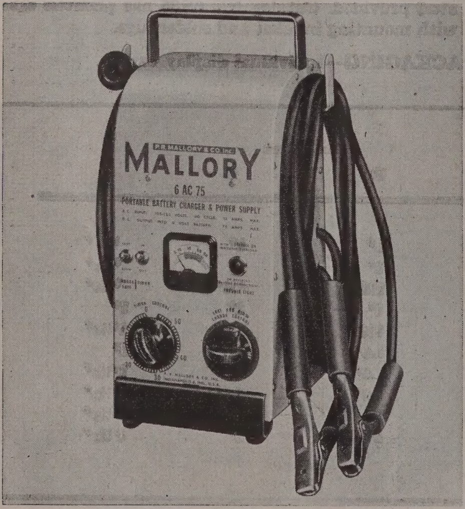
MALLORY FAST CHARGER AND DC POWER SUPPLY



● The Mallory 6AC75 Fast Charger and DC Power Supply is a portable unit providing a reliable source of 6-volt DC-75 ampere power. The unit may be employed as a continuous power supply, fast charger, or slow charger.

The 6AC75 is ruggedly constructed using full size components. A heavy duty Mallory Magnesium Copper Sulfide metallic rectifier connected in a bridge of full-wave circuit is cooled automatically by means of a built-in electrically operated fan. The unit is protected by a strong sheet steel cabinet finished in rust-resistant and corrosion-free white enamel. Output is indicated by means of an easy-to-read 2¼″ ammeter.

Three rates of fast charge, and three rates of slow charge may be employed by means of a special panel switch. A 57 minute timer is built into the timer control switch to cut the timer in and out of the circuit as required. Two self-reclosing overload circuit breakers are used in the input circuit to prevent overloading. Any overloading is indicated by the flashing of a light bulb connected across the circuit breakers.

The unit is completely packed in one carton.

OVERNIGHT BATTERY CHARGERS

APPLICATIONS—Mallory Automotive and Marine Battery Chargers provide convenient, efficient and economical charging of any storage battery used in automobiles, buses, trucks, tractors, taxicabs, small boats, airplanes, and on the farm. Taper charging (an automatically decreasing charging rate) is designed into all Mallory chargers to prevent damage to battery plates and to insure maximum battery life. These chargers also are ideal for charging any 6 or 12-volt storage battery used in industrial applications, engineering and research laboratories, test equipment, and service benches, etc.

Although designed principally for storage battery charging, Mallory Automotive and Marine Battery Chargers may be used for numerous other applications. They provide an ideal power source for electroplating, model and toy trains, telegraph systems, relays and solenoids, vending machines, electric organs, generator fields, etc. In conjunction with an adequate filter they may be used as a power source for farm and portable radio filaments, auto radio receivers, telephone systems, loud speaker fields, exciter lamps, scientific apparatus, etc.

DESCRIPTION—The heart of these chargers is the Mallory Magnesium-Copper Sulfide all-metal rectifier. Unaffected by temperature and able to withstand phenomenal abuse, they provide stable output without adjustment over long life. With an exclusive self-healing feature, Mallory rectifiers have been time-tested and proved to be the most rugged dependable rectifier for battery-charging applications.

Mallory Automotive and Marine Battery Chargers are made in five models to cover the complete charging field from battery boosters to fast chargers. All chargers are conservatively designed with circuit protection and meters where required, and large capacity battery clips for ready connection to battery posts. All models are designed for operation from 115-volt 60-cycle power lines and are equipped with ample lengths of both AC and DC cables.

MOUNTING—All chargers are readily portable. They may be placed anywhere: in the car, on the garage floor, on a bench, etc. The small models are equipped with two holes for wall mounting where desirable.

ACCESSORIES—Although equipped with battery clips, a readily attachable polarized dashboard plug and receptacle (No. R-652) or cigarette lighter plug (R-655) are available as accessories for simple installation in an automobile. The addition of one of these receptacles makes possible simple plug-in connection of the charger to the car battery. Extra battery clips (No. R-653) are available. Automatic timer control (No. R-654) is offered for use with battery chargers to control the charge. It may also be used with many household appliances.

PACKAGING—One charger per cardboard shipping carton.

Mallory Vibrator Checker

● The Mallory 6VT1 vibrator tester has been designed as a companion unit to the famous Mallory 6RS10 filter rectifier power supply to test directly, without adaptors, most of the popular vibrators and all of the passenger car radio vibrators used since 1940. As either 6X5 or 0Z4 rectifier tube plugs into the front panel, interrupter vibrators can be tested in conjunction with the rectifier tube with which they normally work in the equipment. Defective vibrators or rectifiers can readily be determined by the substitution method. Self rectifying vibrators are tested by removing the rectifier tube. Either shunt or separate drive vibrators can be tested of any frequency from 100 to 250 cycles. The condition of the vibrator being tested may be read directly from the "good-bad" meter scale.

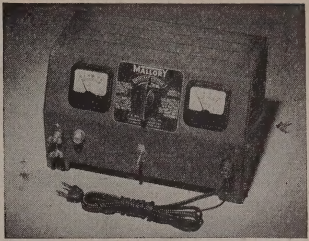
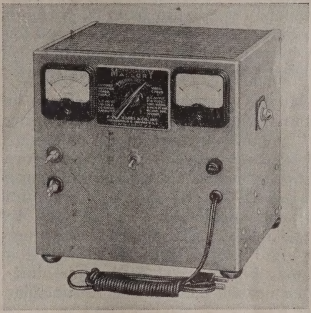
Mallory 6RS10 Bench Power Supply



● The Mallory 6RS10 6 volt power supply has been designed as a convenient source of DC current wherever 110-115 volt AC current is available. It is particularly suited for testing of automobile radio sets and has ample power to operate those with electrical tuning mechanisms. DC voltage is continuously variable from 0 to 8 volts. The unit may be safely operated continuously at 10 amperes and intermittently at 20 amperes with 10,000 mfds. of filter capacitance.

The power supply is fully equipped with a 0-20 ampere DC ammeter, a 0-10 volt DC voltmeter, a self resetting circuit breaker in the DC line, a switch and fuse in the AC line, and a six foot AC cord. Overall dimensions: 6¾″ high, 10⅜″ wide, and 5½″ deep. Shipping weight approx. 13 lbs.

Catalog No. 6RS10



Mallory 6RS25 Heavy Duty Six Volt DC Power Supply

● The Mallory 6RS25 6-volt 25 ampere rectifier type power supply is designed to replace storage battery charger combinations for bench testing medium power 2-way mobile-phone equipment. It may also be utilized for non-radio uses requiring well-filtered low voltage DC in the 25 ampere range. Heavy sheet-steel housing makes it adaptable for use in garages as mobile radio bench equipment.

The 6RS25 operates from a standard 115 volt 60 cycle source to supply DC voltage from 0 to 8 volts at continuous or variable loads of 0 to 25 amperes. Intermittently, it will supply a maximum of 40 amperes at 6 volts.

An adjustable variable control allows quick selection of any voltage from 0 to 8 at 0 to 25 amperes. Thirty-thousand mfds. of filter capacitance free the unit from RF and 60 cycle line interference. A 0-10 volt DC voltmeter and a 0-20 ampere DC ammeter are included.

Conduction cooling of the full-wave metallic rectifier, automatic overloading protection, and a self resetting circuit breaker insure long life. A voltage stabilizer for no-load to full-load conditions gives additional protection.

Overall dimensions—11″ high, 10½″ wide, 8¾″ deep overall. Shipping weight—26 lbs.

Type 8304 Illustrated

Mallory Spiral Inductuner*

APPLICATION—The two, three, and four (illustrated above) gang Spiral Inductuners* are variable inductance tuning devices designed to provide efficient front end tuning in deluxe television and FM receivers and boosters. In addition, amateurs, experimenters, and industrials have found the Inductuner* particularly satisfactory for the tuning requirements of VHF communication receivers and general purpose test equipment. When used in conjunction with suitable tubes and a minimum of circuit wiring these Inductuners assure accurate, noise-free, and continuous tuning of the entire frequency spectrum from 52 through 216 megacycles. The Inductuner eliminates the need for band switches, plug-in coils, turret coil assemblies or complicated circuit wiring when used for this purpose.

DESCRIPTION—Models with either two, three, or four separate variable inductors are available. Tuning is accomplished in all models by means of a single ¼″ shaft to vary the inductance of each of the inductors simultaneously from the front of the equipment using the Inductuner. Automatic stops at the maximum and minimum inductance positions are provided to prevent damage to the inductors, and each Inductuner is equipped with a rigid metal bracket to which a suitable tuning dial may be attached. Suitable mounting holes are provided on the base of the Inductuner for chassis mounting.

The individual coils have a maximum inductance of .985 uh and a minimum inductance of .025 uh. Total shaft turns are 5.925+.060—.000.

SHAFT DESCRIPTION—Each Inductuner has a 2½″ shaft—¼″ diameter.

ACCESSORIES—None.

PACKAGING—One Inductuner per display carton.

Application

The principal use of Mallory Grid Bias Cells is in the biasing of the first audio amplifier tube in modern high-gain receivers. Diagram of a typical circuit is shown at right. The bias cell does not need to be by passed to ground.

Correspondence is invited regarding the application of Mallory Grid Bias Cells.

Characteristics

The no-current potential of Mallory Grid Bias Cells is within plus or minus 10% of their rated voltage.

Current—The cells are strictly potential or voltage cells for biasing class "A" amplifier tubes and should not be used for biasing power tubes or oscillators; or for any circuit where direct current may flow through, or be drawn from, the cells.

Temperature—The cells may be used at temperatures from 0°F to 140°F. The voltage of the cells remains reasonably constant throughout this wide temperature range. It is recommended, however, that wherever possible the bias cells be placed in the coolest location.

Humidity—The cells exhibit no change in characteristics when exposed to a relative humidity of 90% at 120°F.

Impedance—Mallory Grid Bias Cells are non-reactive at audio frequencies. The DC resistance of the cell ranges between 10,000 and 40,000 ohms.

Noise—The cells do not cause noise.

ELECTROX VIBRATOR ANALYZER

New Electrox Vibrator Analyzer provides a *thorough* and *practical* method of vibrator testing. This equipment combines a reliable, heavy-duty, adjustable power supply for operating automobile radios, with an analyzer for making a *complete* auto radio vibrator test.

The Electrox Vibrator Analyzer accurately determines shorted and otherwise defective vibrators and predicts vibrator failures before they occur. It measures starting voltage, current consumption, output voltage and indicates irregular or intermittent operation. It subjects the vibrator to voltage conditions encountered when normally connected to the electrical system of the automobile.

AR-3 ADAPTER STRIP—Plugs into the Vibrator Analyzer and accommodates most vibrators requiring special sockets.

* These units are supplied with an "L" terminal which allows connecting in the field to limit the output voltage to the applied voltage. If "L" type connection is required on other models, the "L" must be included in the type number when ordering.

‡ When these POWERSTATS are "L" connected so that the output voltage does not exceed the applied voltage, the frequency range is 50/60 cycles.

** When a motor-drive is required, prefix the letter "M" together with the speed designation letter to the type number. T — 5 seconds, Z — 6 seconds, Y — 14 seconds, X — 19 seconds and W — 45 seconds for full range travel. Since the driving motors are frequency sensitive, be sure to specify whether 50 or 60 cycles is required. Only manually-operated unit weights are listed. For motor-drives add 10, 11 and 14 pounds to the 116-216, 1126-1226 and 1156-1256 types, respectively.

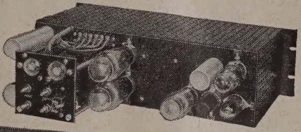
STABILINE *Automatic* VOLTAGE REGULATORS

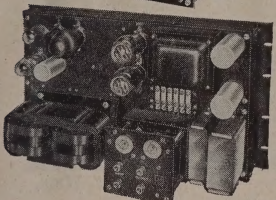
Two types of STABILINE automatic voltage regulators are built by The Superior Electric Company to meet the requirements of maintaining constant voltage to electrical equipment.

TYPE IE INSTANTANEOUS ELECTRONIC

Completely electronic, instantaneous in action, with no moving parts. Waveform distortion never exceeds 3%. Output voltage is held to within ±0.1 per cent of nominal for wide line variations; to within ±0.15 per cent of nominal for any load current change or load power factor change from lagging .5 to leading .9. Standard types listed below.

TYPE IE51002R





TYPE IE5101R

TYPE EM ELECTRO MECHANICAL

Consists of an electronic detector circuit controlling a motor-driven POWERSTAT variable transformer which feeds a buck-boost auxiliary transformer. Features zero waveform distortion together with insensitivity to magnitude and power factor of load. Has no effect on system power factor. Constant output voltage is maintained regardless of variations in input voltage or load current.

HORIZONTAL DEFLECTION OUTPUT and HIGH VOLTAGE TRANSFORMERS

Part No.	Application	Height Overall	Base Area	Shpg. Wt. in Lbs.	Mtg. Type*	List Price
A-8117	Designed for use with Stancor DY-1 deflection yoke, or equivalent, and with direct viewing kinescopes requiring 50° magnetic deflection. Used with one 6BG6-G deflection amplifier, one 6AS7-G or one 5V4-G scanning booster and one 1B3-GT/8016 pulse rectifier (may require filament resistor, adjusted for proper voltage). Auto-transformer primary provides voltage for pulse rectifier supply kinescope anode potential. Filament winding for pulse rectifier included. Tap on secondary permits connection of width control.	4 11/16"	3 3/4" x 2 1/4"	1.7	HO	**$9.25**
A-8119	For use in pulse-operated power supply requiring two rectifiers in a voltage-doubling circuit to deliver 13,000 to 14,000 volts to the anode of a kinescope such as the 16AP4.	4 11/16"	3 5/8" x 2 1/4"	1.8	HO	**10.40**
A-8127	For use in pulse-operated, single rectifier power supply and provides 5–10% more deflection than RCA Type 211T1. This Stancor unit is intended for use in newer TV receiver designs emplying the 10BP4 kinescope.	4 11/16"	3 3/4" x 2 1/4"	1.8	HO	**9.25**
A-8128	In a pulse-operated, single rectifier power supply, the A-8128 will develop 10,000 to 12,000 volts of anode potential with adequate sweep for full horizontal scan of a 12 1/2" kinescope such as the 12LP4. May also be used for simple conversion of a smaller television receiver to a 16" picture, providing very satisfactory operation of the 16AP4 and similar picture tubes at slightly reduced brilliance.	4 11/16"	3 3/4" x 2 1/4"	1.8	HO	**10.50**
A-8129	For use in a pulse-operated, single rectifier power supply to deliver 13,000–14,000 volts of anode potential with adequate sweep for full horizontal scan of a 65–70° kinescope. May be used for conversion of older TV receivers to take newer picture tube types. Appropriate wide angle deflection yoke, such as the Stancor DY-7, should be employed with the A-8129.	4 11/16"	3 3/4" x 2 1/4"	1.8	HO	**$11.00**

*These units meet requirements of Underwriters Laboratories for interlocked enclosure mounting.

DY-1	Designed for use with direct viewing kinescopes requiring 50° deflection Provides required retrace time when used with deflection circuits employing horizontal output transformers, such as Stancor Part Numbers A-8117 and A-8127, and vertical output transformers, such as Stancor Part Numbers A-8115 and A-8116. Performance checked to close linearity limits.	DY	1.2	**$ 7.50**
DY-7	For use with direct viewing kinescope requiring 65–70° deflection. Provides required retrace time when used with deflection circuits employing horizontal output transformers such as the A-8129. For tubes having neck diameter of 1 7/16", such as RCA 16GP4.	DY	1.0	**$10.75**

FOCUS COIL

Part No.	Application	Mtg. Type	Shpg. Wt. in Lbs.	List Price
FC-10	Designed for use with magnetically focused kinescopes with deflection angles up to 50°. The larger center hole of the coil provides ample clearance between core and kinescope neck, allowing for tipping and displacing axis when necessary. For best performance, a rheostat adjustment of the operating current should be used.	FC	2.0	**$7.50**

HIGH FIDELITY OUTPUT TRANSFORMERS

Better than ±1 db from 20 to 20,000 cps.

These Stancor output transformers combine the most advanced design and manufacturing practices to provide outstanding audio response at low cost. Maximum power level is conservatively rated at 50 watts. They are designed to match the most popular types of output tubes to speaker or line impedances.

Extensively interleaved "trifilar" windings, extremely tight coupling and careful electrical balance result in audio fidelity to please the most critical specialist. Inasmuch as elaborate shielding is not required at the audio output level, an inexpensive, but thoroughly practical, Type C mounting is used. Shipping weight is 6.5 lbs.

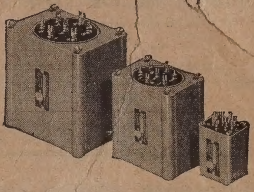
HIGH FIDELITY TRANSFORMERS

STANDARD TRANSFORMER CORPORATION

HF AND WF SERIES HIGH FIDELITY AUDIO TRANSFORMERS



HF Series

These units have a wide frequency response of 20 to 20,000 cps with ±1 db. Correct design reduces harmonic and intermodulation distortion to a negligible amount. Balanced construction minimizes hum pickup. Stancor impregnation insures long life. Cases are finished in gray enamel and have four threaded holes at each end for flush mounting. Stud-type terminals are plainly marked for easy identification.

MULTI-PURPOSE INTERSTAGE—PIE-WOUND SPLIT SECONDARIES

May be used as single plate to single grid, single plate to push-pull grid, or push-pull plate to push-pull grid interstage transformers. Overall ratios are 3:1, however, primaries are center-tapped and secondaries have split windings, thus providing ratios of 1:1, 3:1 and 6:1 in either step-up or step-down applications.

POLY-PEDANCE DRIVER MULTI-TAPPED UNITS FOR USE IN CIRCUITS WHERE THE OPTIMUM RATIO CANNOT BE PREDETERMINED.

Driver circuit changes often require new transformers. Many times it is impossible to match correctly tubes involved with a specific transformer, with high distortion resulting. *Poly-Pedance* units solve that problem; three transformers with the maximum number of usable ratios will match the driver tubes to any Class B modulator grid circuit without exceeding the power capabilities of the driver tubes.

POLY-PEDANCE MODULATION MULTI-TAPPED UNITS TO PROPERLY MATCH THE OUTPUT OF THE MODULATOR STAGE TO THE MODULATED LOAD. WILL MATCH ALL COMMON IMPEDANCES OF CLASS "B" MODULATOR (2,000 to 20,000 OHMS) TO CLASS "C" LOAD IMPEDANCES OF 2,000 TO 20,000 OHMS.

The number of excellent transmitting tubes available is constantly increasing. R.F. applications, too, have increased and it is sometimes difficult to obtain the correct modulation transformer suitable for matching some given modulator tubes or R.F. load. These units give an almost unlimited range in power and impedance ratings to assure a correct impedance match in all cases.

AUDIO FILTERS

STANDARD TRANSFORMER CORPORATION

SPLATTER SUPPRESSOR FILTER

Use of a splatter suppressor filter between the modulator and Class C amplifier eliminates undesirable high audio frequencies and harmonics which cause interference to stations on other channels. Stancor Part Number C-2317, illustrated in a typical circuit application in Figure 1, attenuates frequencies higher than 3,000 cps when used in accordance with supplied instruction data. The effectiveness of the system is greatly enhanced by the negative peak limiter tube shown in the circuit.

Part No.	Application	Range of Inductance†	Max. D.C. in Ma.	Mtg.	Height Overall	Base Area	Shpg. Wt. in Lbs.	List Price
C-2317	Splatter Suppressor Filter	0.048 to 0.9 hy.	300	B	2⅝″	3″ x 3″	2.3	**$6.75**

BAND PASS FILTER

In radiotelephony, it is highly desirable to limit frequencies in the sidebands to those providing the greatest degree of intelligibility. Useless, power-consuming low and high frequencies can be efficiently eliminated by insertion of the Stancor Part Number C-2340 band-pass filter in the speech amplifier. When used in conjunction with a peak-clipper, a high *average* percentage of modulation is possible, providing a signal that rides over the QRM. The graph (Figure 2) illustrates the frequency curve of this three-section, *m*-derived filter.

LOW PASS FILTER

The economical Stancor Part Number C-2341 unit offers an *m*-derived, low-pass filter that will give a good account of itself and may be used to further advantage with a peak-clipper. Typical circuit application of this low-pass filter may be found on page 24 of the November, 1946, issue of QST. See Figure 3 below for frequency curve of the C-2341.

Testing Autoformer—Designed especially for various service and test application. Incorporates a convenient tap switch to permit variable voltages from 90 to 150 volts. It may be used to apply an overload voltage to amplifiers, radio receivers, or other electronic devices being serviced, which will indicate and cause suspected parts to break down. Primary equipped with 6 ft. approved cord and plug. Secondary connected to female receptacle.

LINE ADJUSTING AUTOFORMERS

Stancor Line Adjusters permit operation of electrical devices at 115 volts when the supplied voltage is 65, 75, 90, 100, 115, 130 or 145. They are also useful for altering a 115 volt line above or below that level. The line adjuster input is correctable in seven steps by means of a selector switch and is accurately indicated by an output voltmeter. The meter has a convenient red-line marker at 115 volts on a 150 volt scale.

SIX VOLT DC POWER SUPPLY

The Stancor Model 752 Master Pack replaces bothersome storage batteries, meeting the needs of the serviceman for a six volt power supply that is practical in design, convenient to use, and large enough to handle heavy-duty jobs.

The Stancor Master Pack is conservatively rated to provide 6 volts D.C. at 12.5 amperes continuously from the standard 115 volt, 50–60 cycle source. An instantaneous rating of 25 amperes makes the Model 752 ideal for demonstrating or testing auto radios with push-button or floor-switch magnetic tuning. Reserve power permits simultaneous operation of two or more receivers. Separate voltmeter and ammeter afford a continuous, visual check of voltage and current delivered to load. Meter needles are damped to prevent annoying "wiggle." The extractor-type line fuse gives positive protection against damage from excessive overloads. Thorough filtering, less than 3% ripple through a choke-capacitor filter, allows use in applications where the hum from a poorly filtered power supply cannot be tolerated. Selenium rectifiers are used for dependability and cooler operation. Controls and terminals are conveniently located on the front panel. The sturdy steel case is finished in durable gray hammertone. No detail has been slighted in making the Stancor Model 752 Master Pack the outstanding power supply for the service bench. Size overall, 9½" high, 7⅜" wide, 12" long. Weight in carton, 30 pounds.

"HS" (hermetically sealed) SERIES TRANSFORMERS

DURING World War II, it became apparent that even the best in pre-war transformer construction was not adequate protection against failure in the conditions prevalent in South Pacific combat areas. Hurried developments in sealing and fungicidal treatments achieved some data which was later amplified experimentally and codified under JAN-T-27 specifications and testing procedures. TRIAD hermetically sealed transformers of the "HS" Series come from a production line which has produced many thousands of transformers under these specifications. TRIAD "HS" Series Transformers feature:

Wide range. Frequency responses from 20-20,000 cycles within ± 1 db.

Protection against stray fields. The GP Series of drawn and annealed nickel-alloy cases, interlaced with high conductivity shading rings, reduce hum pickup by as much as 95 db.

Small size. High quality electronic equipment frequently must be portable, and not only in a truck. We call attention to the HS-11 and HS-1, affording 20-20,000 frequency range and adequate shielding in less than half the cubic volume of comparable pre-war transformer designs.

Strong mechanical construction. TRIAD's own hermetic seals, employing sturdy brass studs and low-loss molded plastics, minimize mechanical failure in production, service and storage.

Attractive appearance. Sturdy deep-drawn steel cases, of smoothly matching lines, and finished in attractive TRIAD gray, add much to the appearance of the equipment in which "HS" Series Transformers are used.

Wide range power handling capacity. TRIAD "HS" Series Output Transformers deliver their full power without distortion within ± 3 db. from 20-20,000 cycles. Low leakage reactance, low flux density, and ample quantities of the highest quality lamination alloy contribute to this result.

Dependability. Liberally designed and accurately wound transformers of low temperature rise; "Climatite" treated, poured with silica-filled asphalt of high heat conductivity, rigidly supported, and hermetically sealed, TRIAD leaves no step untaken to supply the best in quality transformers.

"TRIJETS"-Midget Hermetically Sealed Transformers

"Trijets" are midget hermetically sealed transformers for use wherever good quality and portable operation must be combined. Originally, "Trijets" were designed to meet the requirements for "Miniaturization" developed by the Armed Service and have been used in many types of military equipment. "Trijets" are linear in frequency response from 50-10,000 cycles and will handle operating levels up to + 10 dbm. "Trijets" are 15/16" in diameter and mount on 2-56 studs spaced 9/16". Case JOA is 1-13/32" long, weighs 1¼ oz. Case JOB is 1-25/32" long, weighs 1½ oz.

TRIAD . . . AMATEUR and ORIGINAL EQUIPMENT

AUDIO Components

Triad general purpose audio transformers and reactors are designed for specific applications in electronic equipment. No effort has been made to supply "universal" components capable of a wide range of functions since such designs are low in efficiency and high in cost.

Frequency response is 300-3000 cycles for portable gear, 70-7000 cycles for PA and replacement type transformers, and 30-15000 for high fidelity units. Output coils are designed to deliver their rated output over their full frequency range. Heavy steel cases are used to prevent shifting and breakage, even on heavy duty mobile equipment.

"Climatite" treatment is used in all types. Size is kept to a minimum by use of high quality materials. Cased types are finished in durable and attractive gray enamel. Static and magnetic shielding is used wherever the application indicates that these are needed.

The TRIAD high-fidelity transformers in the group at right afford a standard of performance exceeded only by the "HS" Series outputs as listed on Page N-19.

Designed with plenty of the highest quality core material and with interleaved windings of low resistance, these coils have a frequency response linear within 1 db. from 30-15000 cycles and will deliver their full rated output within 3 db. over this entire range of frequencies. Their high open circuit reactance and low leakage reactance will permit their use within feedback loops employing as high as 30 db. of negative feedback.

THORDARSON TRANSFORMERS

NEW STREAMLINED SERIES

This is the new Thordarson post-war series of Transformers and Chokes. Every unit has been designed for utmost efficiency and adaptability. Many of the engineering and production advancements developed by Thordarson during the war, are used in producing this line.

The new lamination alloys and insulating material, incorporated in this series, results in superior performance and a greater factor of safety without an increase in size or weight. Consequently, some types are smaller and more compact without sacrificing efficiency or performance.

Finished in baked grey enamel and fitted with matched mounting styles, the units present a uniform appearance. This is especially desirable where several Transformers and Chokes are mounted on the same chassis.

Types for Radio Receiver Replacement, Amateur Radio, Sound Systems and allied applications, can be selected from this listing.

It is essential that the class C R.F. load be properly matched to the class B modulator tubes for a maximum transfer of speech energy with low distortion. Thordarson Multi-Match modulation transformers have sufficient flexibility to enable the engineer or amateur to adjust the impedance ratio of primary to secondary, to meet any practical condition of operation. This feature forestalls the possibility of the modulation transformer becoming obsolete due to changing the modulator or class C tubes. The use of new tubes or a change in class C voltage and current will not necessitate the need of a new modulation transformer, providing the power capacity is adequate. Complete charts and instructions for proper matching are supplied with each unit.

PLATE TRANSFORMERS

The new Thordarson plate transformers are designed to deliver the rated D.C. voltage from a two-section filter which includes the voltage drop in the rectifier tubes and chokes. Two current ratings are indicated, "Continuous Commercial Service" (CCS) and "Intermittent Commercial or Amateur Service" (ICAS). These dual ratings make it possible to select the plate transformer exactly suited for each application.

CHOKES—REACTORS

Universal Types—Swinging and Smoothing

Thordarson Universal Chokes are designed for use both in the input and smoothing positions. Where the current taken from the power supply is essentially constant (not varying more than a few percent) the chokes should be selected so as not to exceed the rated D.C.-M.A. If the current fluctuates considerably, as is the case where the power supply furnishes a class B modulator stage, the chokes should be selected so as not to exceed the rated D.C.-M.A. rating under the steady state of operation, and not to exceed the Max. D.C.-M.A. rating when the modulator stage is fully excited.

These are truly universal chokes suitable for use in power supplies requiring either input, swinging or smoothing types.

The tapped Splatter Chokes are used between the modulator and Class C stage for eliminating objectionable side band splatter. Full instructions and circuit diagrams are supplied with each unit.

LINEAR STANDARD AUDIO TRANSFORMERS

LINEAR STANDARD AUDIO UNITS FEATURE:

UNIFORM FREQUENCY RESPONSE . . . at low frequencies, is effected through the use of HIPERM-ALLOY, a STABLE nickel iron alloy of very high initial permeability. Uniform high frequency response is the result of multiple section interleaved windings arranged in a semi-toroidal coil structure. This, plus special winding methods and insulations, assures a minimum of distributed capacity and leakage reactance.

UTC LINEAR STANDARD transformers are the ONLY audio units with a **GUARANTEED** uniform response . . . ± 1 DB from 20 to 20,000 cycles.

MINIMUM HUM PICKUP . . . is accomplished through the use of a hum balanced, semi-toroidal, coil structure which affords maximum neutralization of external fields. In addition, all units employ high conductivity outer case for maximum shielding. For very low level applications, units whose code numbers end in X employ multiple alloy shielding, making possible a transformer with extremely low inductive pickup.

NEGLIGIBLE WAVE FORM DISTORTION . . . is a function of proper impedance matching, minimum phase shift, and low flux density. These elements have been given great attention in the design of Linear Standard units. It is interesting to note that an output transformer reasonably flat from 20 to 20,000 cycles may show serious distortion at 30 and 10,000 cycles. For this reason, UTC high level units have a frequency range better than guaranteed value, generally 10 cycles to 50,000 cycles (see page 6).

MULTIPLE TAP WINDINGS . . . make possible a wide combination of impedance terminations without impairing fidelity or efficiency. Precision winding methods result in winding accuracy of .1% . . . perfect balance of inductance and capacity . . . exact impedance reflection.

DEPENDABILITY . . . is a function of external and internal structure. Linear Standard units are housed in rugged die cast cases of precise dimension with reversible mounting to permit above chassis or subchassis wiring. The solid terminal posts on low absorption bakelite are arranged in a circular layout so that a round chassis hole will clear all terminals. Coils are vacuum baked and impregnated. **Semi-hermetic sealing** is accomplished through the use of a high adhesion compound poured through the large opening opposite the terminal board after controlled preheating of the unit for full compound penetration.

LS OUTPUT TRANSFORMERS THE FINEST

While the UTC Linear Standard line is generally designed for a flat response from 20 cycles to 20 Kc., a much wider response is required for output transformers. As is noted in the first curve below, typical UTC output transformers are down less than 1 BD at 10 cycles and less than 1 DB at 40 to 60 Kc. Because of this, a fine power output curve is possible. (Second curve.)
The third figure below illustrates square waves obtained with the LS-63 transformer in a "Williamson" Amplifier Circuit. Of particular interest is the short rise time, which is far superior for UTC transformers than any standard make which we have measured.

In choosing power components for broadcast and commercial equipment, the first factor to be considered is dependability. Linear standard power components are very conservatively designed for maximum reliability. Designs provide for low temperature rise, 40°, and high insulation safety factors. Only the finest of materials and workmanship are used throughout.

The low power components of the Linear Standard series are housed in the familiar rectangular LS case with top or bottom mounting facilities. High power components are housed in end castings which completely protect the winding, while directly exposing the laminations for maximum heat transfer.

All units have a deep grey finish to obtain the highest heat radiation coefficient. Large components (up to 250 KVA) are housed in oil tanks.

HIPERM ALLOY TRANSFORMERS

The UTC Hiperm alloy audio and power transformers are specifically designed for portable and compact service. While light in weight, neither dependability nor fidelity has been sacrificed. The frequency characteristic of the Hiperm alloy audio units is uniform from 30 to 20,000 cycles. They incorporate a Hiperm-alloy nickel iron core and hum balanced coil structure. The rugged die cast case is of high conductivity alloy finished in grey, arranged for mounting with the terminals either up or down. DC in Prim'y shown is maximum unbalanced.

ULTRA COMPACT AUDIO UNITS

The **UTC Ultra compact** audio units are small and light in weight, ideally suited to remote amplifier and similar compact equipment. High fidelity is obtainable in all individual units, the frequency response being ± 2 DB from 30 to 20,000 cycles.

All units except those carrying DC in Primary employ a true hum balancing coil structure, which combined with a high conductivity outer case, effects good inductive shielding. The die-cast case provides for top or bottom mounting. Maximum operating level +7 DB.

SUBOUNCER UNITS

FOR HEARING AIDS...VEST POCKET RADIOS...MIDGET DEVICES

UTC Sub-Ouncer units fulfill an essential requirement for miniaturized components having relatively high efficiency and wide frequency response. Through the use of special nickel iron core materials and winding methods, these miniature units have performance and dependability characteristics far superior to any other comparable items. They are ideal for hearing aids, miniature radios, and other types of miniature electronic equipment.

The coils employ automatic layer windings of double Formex wire . . . in a molded Nylon bobbin. All insulation is of cellulose acetate. Four inch color coded flexible leads are employed, securely anchored mechanically. No mounting facilities are provided, since this would preclude maximum flexibility in location. Units are vacuum impregnated and double (water proof) sealed. The curves below indicate the excellent frequency response available. Alternate curves are shown to indicate operating characteristics in various typical applications.

SUB-SUBOUNCER UNITS

UTC Sub-SubOuncer units have exceptionally high efficiency and frequency range in their ultra-miniature size. This has been effected through the use of specially selected Hiperm-Alloy core material and special winding methods. OUNCER AUDIO UNITS

STANDARD AND PLUG-IN TYPES

UTC OUNCER components represent the acme in compact quality transformers. These units, which weigh one ounce, are fully impregnated and sealed in a drawn aluminum housing ⅞″ diameter . . . mounting opposite terminal board.

Ouncer items are ideal for portable broadcast, hearing aid, aircraft, concealed service, and similar applications. High fidelity characteristics are provided, uniform from 40 to 15,000 cycles, except for 0-14, 0-15, and units carrying DC which are intended for voice frequencies from 150 to 4,000 cycles. Maximum level 0 DB.

"P" series units are identical to the UTC OUNCER units but are sealed in bakelite housings with plug-in base to fit standard octal socket. While of submersion proof design, these units weigh but two ounces. Oversize pins in the base make it impossible to dislodge these units from their sockets.

UNCASED HIGH Q TOROIDS

There are many applications in the audio, carrier, and supersonic fields requiring inductors of high Q and great stability. The HQ series of permalloy dust toroid units developed for these applications have remarkable characteristics.

HQA coils have maximum Q (100) at approximately 5,000 cycles. **HQB** coils have maximum Q (200) at approximately 4,000 cycles. **HQC** coils have maximum Q (200) at approximately 30 Kc. **HQD** coils have maximum Q (200) at approximately 60 Kc. The stability is excellent and types are available for all high Q applications from 300 cycles to 300 Kc.

Stability is excellent. For the HQA-7 coil illustrated inductance change is less than 1% for applied voltages from .1 to 25 volts. For the HQB-5 coil illustrated the inductance change is less than 1% for applied voltage from .1 to 50 volts. DC is permissible through the coil. Inductance is virtually independent of frequency, temperature, and vibration.

Hum pickup is extremely low due to the toroidal winding structure . . . 70 microvolts per gauss for the HQA, 140 microvolts per gauss for the HQB. The cased toroid structure permits close spacing of units, effecting a coupling attenuation of approximately 80 DB.

All HQ coils are **hermetically sealed.** Units are laboratory adjusted to **1% tolerance.**

Uncased HQ Coils in any of the types listed are available from stock. Deduct $1.50 from cased price.

Other Values of Inductance than those listed available on special order at price of next higher listed value.

Mu-Core Coils employ special laminated core structures for good stability and low external field. The curves shown indicate approximate Q obtainable at any specific frequency by designing for that frequency.

UTC type VIC variable inductors offer a revolutionary approach to the problem of tuned audio circuits. By adjusting a set screw in the side of the case, an inductance value of +90%, −50% from mean value is obtainable. Setting is positive. Effective Q for a wide frequency range and variation of inductance with applied AC voltage are shown on the illustrated curves, for a typical VIC unit.

The VIC inductor is housed in a rugged die cast case $1\frac{11}{32}$" long, $1\frac{1}{4}$" wide and $1\frac{7}{16}$" high with mounting centers on terminal board side $1\frac{3}{16}$" by $\frac{29}{32}$". Weight is $5\frac{1}{2}$ oz.

UTC standardized filters have been designed to take care of many present day filter requirements through stock units. The interstage type filters have a nominal impedance of 10,000 ohms, and lend themselves to effecting gain simultaneously with their frequency discrimination.

BMI units (Band Pass) have 2:1 gain. They are sharply peaked, having approximately 2 DB attenuation at plus or minus 3% from center frequency and attenuation of 40 DB per octave as shown.

HMI units (High Pass) have a loss of less than 6 DB at cutoff frequency.

LMI units (Low Pass) have a loss of less than 6 DB at cutoff frequency, and an attenuation of 35 DB at 1.5 cutoff frequency.

BML (Band Pass), **HML** (High Pass), and **LML** (Low Pass) filters are similar to the interstage filters, in all characteristics, except that they are intended for an input and output impedance of 500/600 ohms.

All of the standard filters are housed in **hermetically sealed** cases, shielded to reduce hum pickup to 150 MV per gauss at 60 cycles.

In addition to the stock filters listed, any of the six types are available as **special units** for any frequency from 200 to 10,000 cycles. Order by type followed by frequency, as LMI-2500, designating low pass interstage filter—2500 cycles cutoff frequency. These special units are priced at $35.00 net.

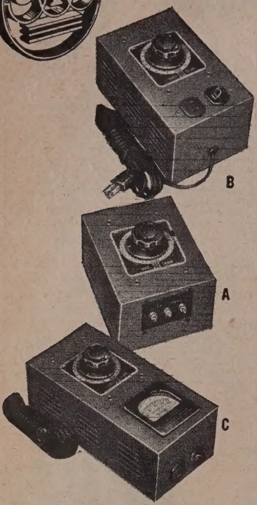
UTC VARITRAN CONTROL UNITS

For controlling: Rectifier output . . . motors . . . heaters . . . lights . . . line voltage



The UTC Varitran is a simple autotransformer whose turns are arranged on one layer with the insulation removed so that every exposed turn may be used as a tap of the winding. A special non-fusing contact can be moved to any position on the winding, permitting the exact voltage desired to be obtained. The regulation and efficiency are excellent and no distortion of wave form occurs. The output voltage is independent of load. In addition to its many laboratory uses, the Varitran is widely employed for controlling electric ovens, fans, soldering irons, furnaces and heaters, for photographic and enlarging lighting control, for life tests of lamps and for dimming illumination.

VARITRAN RATINGS

Standard Varitrans are designed for 115 or 230 volt service. The respective output voltages are 0-130 and 0-260 volts. The Varitran autotransformer current and wattage rating is based at 115 volts (115V. models). As the voltage is reduced, the wattage output is reduced correspondingly. The maximum current can be taken at any point from 0 to 20 volts and from 95 to 130 volts. Between 20 and 95 volts the current capacity tapers off from the two ends to approximately 60% of the rated maximum current at the 65 volt point. The mounting facilities are at both top and bottom of each unit to assure ease of mounting on panel, chassis or for laboratory bench service.

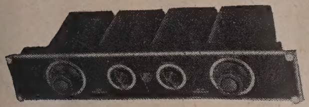
BROADCAST AND RECORDING EQUALIZERS AND FILTERS*

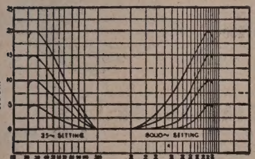
* 500/600 ohms



3AX UNIVERSAL EQUALIZER

The universal characteristics of the UTC 3AX equalizer have made it the most popular item for broadcast and recording equalization. This unique unit, with which most communications engineers are already familiar, is an accurately calibrated, quickly adjustable, combined low and high frequency equalizer. The low frequency controls include a switch for adjusting the maximum equalization frequency to 25, 50, or 100 cycles and a calibrated T-pad for exact adjustment of the amount of equalization. The high frequency portion of this unit includes a switch to set maximum equalization point at 4000, 6000, 8000, 10,000 or 15,000 cycles, and a similar calibrated control reading directly in DB. **Equalization up to 25 DB** available at any frequency selected.

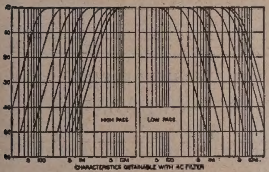
Through a unique arrangement of compensating pads, changes in adjustment of the 3AX equalizer do not affect the insertion loss (50 DB). This permits rapid changes in tone color, with negligible change in volume. Where rapid changeover is required in service from one line to another, or from recording to play back, it is merely necessary to predetermine the required setting. The actual adjustment of the controls can be taken care of almost instantaneously. The construction is of the depressed chassis, etched panel, rack mount type. Thoroughly shielded against inductive pickup with UTC Trialloy Shielding. Dimensions of panel 3½" x 19". Depth 7½". Weight 15 lbs.



TYPICAL CURVES OBTAINABLE WITH 3A OR 3AX EQUALIZER

3A UNIVERSAL EQUALIZER

The 3A equalizer is identical to the 3AX described above, except that it does not incorporate the compensating pads for constant insertion loss. The insertion loss is roughly proportional to the amount of equalization employed. All other characteristics identical with the 3AX unit, this item weighs 10 lbs.



CHARACTERISTICS OBTAINABLE WITH 4C FILTER

4C SOUND EFFECTS FILTER

The use of filters to obtain unusual sound effects is now finding wide application in broadcast technique. The **Model 4C** Filter was originally developed for one of the large broadcast chains, and is now used extensively by most broadcast stations. Two controls are provided on the 5¼" x 19" panel, which is similar in appearance to the 3AX unit. The weight of the 4C unit is 20 lbs.

The **low pass** switch can be set for cutoff frequencies of **100, 250, 500, 1000, 2000, 3000, 4000, or 5000 cycles. The high pass** switch has identical frequency points. The great number of cutoff frequencies provides for a wide latitude of tone control. If desired, though not normally necessary, external potentiometers may be inserted in the circuit for attenuation control.

HERMETICALLY SEALED COMPONENTS

During World War II the United Transformer Company was the largest supplier of transformers to the Armed Services. This same leadership continues in the UTC production of hermetic sealed components for present military applications. Extensive experience in supplying these components for the variety of equipment involved permits us to quickly resolve manufacturers' application problems. A wide range of tools and facilities are available for both standard and miniature types of hermetic sealed units. Standardized cases and terminals specifically designed for military service are available from stock.

For some aircraft and other light weight applications the elimination of the hermetic sealed case is essential. For these designs UTC units are Fosterite impregnated under Westinghouse license

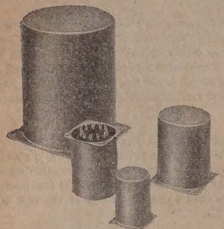
COMMERCIAL GRADE COMPONENTS



The commercial grade series of transformers incorporate conservative design and rugged construction to assure dependability under continuous service operation in industrial and commercial grade communication equipment. These units are mounted in uniform drawn cases finished in light grey enamel, and intended for chassis mounting. All items are poured with special sealing compound in addition to vacuum impregnation of coil structures. Type numbers are identical with the PA units except for the prefix "CG."

CG-134, 135 and 136 are of the hum-bucking type to assure low hum pick-up. All audio components are linear. ± 1½ DB from 40 to 10,000 cycles (no unbalanced D.C.), except CVL and CVM units . . . 40 to 6000 cycles. Parallel feed low level interstage units with 50,000 ohms and .25 mfd. 200 ohm windings on input transformers are balanced and may be used for 150 to 250 ohm circuits.

NEW UNIVERSAL INTERSTAGE EQUALIZER—CGE-1A

The UTC CGE-1A is the ideal device for any application where frequency response control is desired. Incorporating the latest developments in design and manufacture, this new unit provides the ultimate in control and flexibility. This equalizer is not a simple R-C tone control, but employs resonant circuits in a unique arrangement providing equalization characteristics unobtainable by conventional circuits. Designed to work from a low or medium impedance source (0 to 20,000 ohms) to a high impedance (500,000 ohms or open grid), the CGE-1A affords continuously variable equalization over a 30 DB range at either end of the spectrum, while introducing only 18 DB total insertion loss. (See curve above). Complete independence of high frequency and low frequency controls permits a wide variety of settings without affecting the over-all volume level. Because of its low insertion loss, this unit may be incorporated directly in many amplifiers. If existent gain is low, a single medium-mu triode stage will provide both proper gain and source impedance. (See circuit on centerfold, page C.) The mechanical construction permits mounting with case on panel directly behind controls, or with case separated from controls and panel. An etched, calibrated panel is provided.

DYNAMIC NOISE SUPPRESSION-INDUCTOR

Incorporates two accurate High Q coils [.8 hy. and 2.4 hy.] for use in dynamic noise suppression circuits. Excellent circuit accompanies unit.

CG VARIMATCH LINE TO VOICE COIL TRANSFORMERS

The UTC VARIMATCH line to voice coil transformers will match any voice coil or group of voice coils to a 500 ohm line. More than 50 voice coil combinations can be obtained, as follows:

.2, .4, .5, .62, 1, 1.25, 1.5, 2, 2.5, 3, 3.3, 3.8, 4, 4.5,

16, 18, 20, 25, 28, 30, 31, 40, 47, 50, 63, 69, 75.

Where speakers are to be connected in groups to one transformer, it is preferable that parallel connection be used to eliminate the possibility of multiple resonance. If two speakers of different impedances are connected in parallel, the lower impedance speaker will develop greater power. If connected in series, the higher impedance speaker will develop greater power.

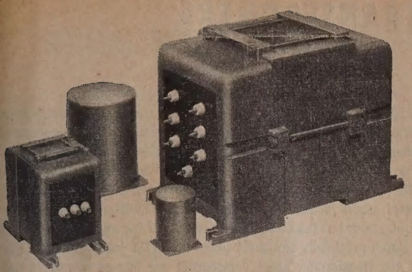
COMMERCIAL GRADE COMPONENTS

UTC Special Series transformers are specifically designed for amateur and popular-priced PA service. The Special units are finished in a rich, commercial type medium gray enamel. A recessed terminal strip is provided permitting above chassis or breadboard wiring in addition to standard chassis type wiring. The universal windings provided on driver, matching and output transformers assure a maximum of flexibility. Modulator output units will carry the DC current of the class C stage for any of the impedances available and will match practically any audio tubes to any RF load within the power rating of the transformer. Large components are housed in formed cases



CG VARIMATCH MODULATION UNITS

ill match any modulator tubes to any RF load.
ne ever increasing number of vacuum tubes available for audio and RF applications s increased the difficulty of obtaining transformers suitable for matching to the rious correct tube loads. If a standard transformer having a limited impedance nge is purchased and used for a specific purpose as the "nearest thing" available, mparatively high distortion is inevitable. While a 20% mismatch caused by such occurrence does not represent a serious loss in power, it greatly reduces the ndistorted power available from a class B modulator because optimum plate load not reflected to the tubes. The UTC Varimatch transformer eliminates this diffi-lty through the use of a combination of tapped windings affording an extremely de range in impedance matching. Designs provide that for any load impedance nployed, full class C plate current can be carried by secondary winding.

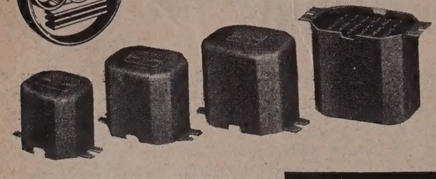
SPECIAL SERIES AUDIO TRANSFORMERS



UTC Special Series transformers are specifically designed for amateur and popular-priced PA service. The Special units are finished in a rich, commercial type medium gray enamel. A recessed terminal strip is provided permitting above chassis or breadboard wiring in addition to standard chassis type wiring. The universal windings provided on driver, matching and output transformers assure a maximum of flexibility. Modulator output units will carry the DC current of the class C stage for any of the impedances available and will match practically any audio tubes to any RF load within the power rating of the transformer. Large components are housed in formed cases with top or bottom mounting. All units are vacuum impregnated—compound filled.

SPECIAL SERIES POWER EQUIPMENT

UTC Special Series power supply components are designed specifically for amateur and popular-priced PA service. The ratings are based on such applications and recommended for ICAS intermittent use. For commercial application, GG or LS grade components should be employed. Tapped coil structures on power and bias supply transformers afford maximum flexibility, permitting a given transformer to be used with many circuits and types of tubes. Stand by service should not be obtained by interrupting high voltage center tap.

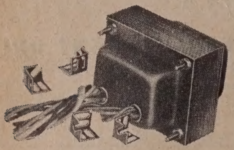
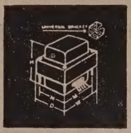
REPLACEMENT TYPE COMPONENTS

(PREVIOUS POWER TRANSFORMERS TYPE R-1 THRU R-13 AND R-54 WILL BE AVAILABLE UNTIL 1951)

The UTC replacement type transformers represent the culmination of years of development in this field. All units are vacuum sealed against humidity with special impregnating materials to prevent corrosion and electrolysis. Shells and brackets are finished in attractive high lustre black enamel.

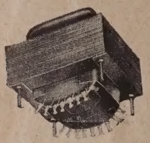
The UTC shells and universal brackets employed make possible a latitude in mounting dimensions never approached heretofore. A minimum number of transformers have been developed to cover any requirement in the replacement field. Pri. 117V. 50/60 cycles.

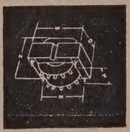




DOUBLE SHELL TYPE

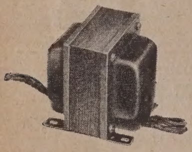
The universal feet may be used for upright or horizontal mounting, or eliminated for flush mounting.

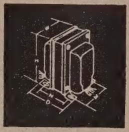




SINGLE SHELL TYPE

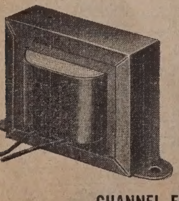
UTC flush type transformers are husky units designed for low temperature rise and good regulation. The rugged solder terminals permit ease of circuit change for the experimenter.

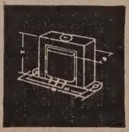




VERTICAL SHELL TYPE

UTC vertical power transformers are unusually attractive in appearance, having smooth drawn cases finished in high lustre black enamel.





CHANNEL FRAME TYPE

Channel frame chokes and audios are conservatively designed. Standard black enamel mounting channels are employed. Coils are tropic-sealed by vacuum-pressure method.

Varitap Duplicate audio units are extremely attractive, the double shells and universal mounting brackets being finished in high lustre black enamel. The figure A units use the UTC universal bracket. This bracket makes possible four hole horizontal or vertical mounting and two hole, channel type, horizontal or vertical mounting. The coils of these units, in addition to efficient design and mechanical shielding, are vacuum impregnated and sealed with a special compound to assure complete protection against adverse climatic conditions.

MODULATION TRANSFORMERS—THE "FIVE" SERIES

SNC universal modulation transformers are specifically designed to provide maximum application possibilities per type. All units are provided with two indentical secondary windings, permitting series or parallel operation. Changes in the ratio can be readily accomplished, when desired, without removing the unit from the chassis. Most units available in either air cooled or compound filled cases.

PLATE TRANSFORMERS—THE "SEVEN" SERIES

All SNC plate transformers have dual secondary ratings. Most units available in either air cooled or compound filled cases. All units contain electrostatic shields between primary and high voltage windings.

*All units may be operated with simultaneous loads—provided the total D.C. current of the two loads does not exceed the rating listed.

FILAMENT TRANSFORMERS—THE "FOUR" SERIES

Most SNC Filament Transformers are constructed to provide two identical center tapped secondary windings and offer a minimum of three applications. They provide three-fold the number of possible applications of ordinary filament types. A few are single secondary units and are so designated. All have 117 V. 50/60 cycle primary.

The Peerless standard commercial line includes power, filament, plate, input, interstage, bridging, output, impedance matching transformers, reactors, and power chokes. Power transformers rated for maximum heat rise of 55°C. Output transformers deliver full rated power ±3 db 30-10,000 cps.

Unsurpassed 20-20 line audio transformers include input, interstage, bridging, output and impedance matching. Frequency response is flat within 1 db. 20-20,000 cps, with good transmission up to 50 KC. Output transformers deliver rated power ±3 db. 20-20,000 cps.

- * Suffix letter on Type Number indicates case style.
- † Low flux-density core for pre-amplifiers.
- ‡ All Primaries are 117 v 60 cycles. All transformers in R group are supplied with electro-static shield.
- ● Secondary impedance is total of two separate windings.
- ▲ Maximum operating level, 6 mw reference.
- ■ All low-impedance secondary windings of high-level output transformers may be worked into loads within 20% of the rated impedance.
- ★ For RMA standardized 70 volt line.

DETAILS OF NEW EQUIPMENT LINE MOUNTINGS

The New Equipment Line offers these exclusive features: (1) Uniformity of mounting—all but the largest units have CHICAGO's famous **Sealed in Steel** constructions; (2) Choice of three alternate mountings, the H-Type, S-Type and C-Type, in most categories.

A fourth construction, the B-Type mounting, is used for the Full Frequency Range audio units, where fine wire windings deserve the highest degree of sealing against moisture.

H-TYPE MOUNTING—Hermetic sealing meets all MIL-T-27 specifications. Steel base cover is bonded into the case by deep-seal soldering. Terminals are hermetically sealed by unique rubber gasket—ceramic bushing construction. Units are stud mounted.

C-TYPE MOUNTING—Moisture-resistant compound surrounds coil and core. Ten-inch, RMA-color-coded leads, ends stripped and tinned for easy soldering. Flange-mounted drawn steel cases.

S-TYPE MOUNTING—Precision-fitted steel base-covers and terminal boards, plus compound filling, keep moisture out. Solder-lug terminals are clearly identified, easy to use. Drawn steel cases are flange-mounted.

B-TYPE MOUNTING—Steel bases are bonded into the drawn steel cases by deep-seal soldering to make units completely moisture proof. Stud-mounted cases take minimum chassis space. Convenient, compact, pin-type terminals.

CHICAGO PUBLIC ADDRESS RANGE AUDIO TRANSFORMERS

Frequency Response within ±1 db, 50 to 10,000 Cycles

Driver and output transformers in this CHICAGO series are designed for three general power levels to fit a wide range of application. Up-to-date secondary impedances match 600 or 150-ohm lines, 16, 8, and 4-ohm speakers. (16/8/4-ohm taps also suitable for 20/6/3.2-ohm speakers.) Output transformers have tertiary windings for 10% inverse feedback that minimizes distortion and provides extra audio watts without loss of fidelity.

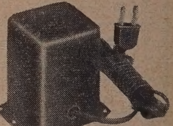
ISOLATION TRANSFORMERS



CHICAGO Isolation Transformers are designed for a dual purpose: (1) To supply 115 volts isolated from a line of above/below normal, or normal, voltage—primary switch sets for 125/115/105 volts, 50/60 cycles; or (2) For use in servicing to eliminate shock hazard, by isolating chassis ground from line ground (particularly important on "hot" AC-DC television sets). Also provide 125 and 105 volts on the secondary for locating doubtful tubes, etc.

APPLICATION—For top chassis mounting in filter and audio bypass circuits and TV applications. Extremely dependable under heavy ripple current, and high surge voltage.

DESCRIPTION—All WP and FP capacitors are designed for high temperature (85°C.) operation at full rated voltage. Single, dual, triple and quad section units encased in compact rubber sealed aluminum cases with self-contained mounting feature. Type FP is supplied with famous Mallory Fabricated Plate (metalized cotton gauze) anodes, type WP with etched plate anodes. Special internal design provides low RF impedance and minimum coupling between sections. Case at negative potential.

TERMINALS—Solder lug type all at one end. Positive terminals identified by symbols in terminal board corresponding to case marking. Mounting ring provides negative terminal connection.

MOUNTING—Primarily designed for twist prong mounting through suitable chassis slots and may also be mounted as follows:

1. Type MP metal wafer providing the necessary slots without actually punching the chassis for grounded negative circuits.
2. Type BP bakelite wafer for insulated mounting, otherwise similar to Paragraph No. 1. One furnished with each capacitor.
3. TH clip for horizontal mounting.
4. Type PS socket for plug-in mounting. (Remove blank ear with diagonal pliers to polarize unit in relation to socket.)

See page 20 for applicable hardware, and insulating sleeves.

PACKAGING—Individual display carton, with mounting wafer.

†Only Mallory can supply genuine Fabricated Plate (metalized cotton gauze) capacitors.

Surge Voltage Data

● **Due to the many multiple section listings on FP capacitors, it is not practical to show surge voltage ratings without consuming considerable space in the chart. The surge voltage ratings are, therefore, given separately in the small chart.**

Why the
MALLORY FP CAPACITOR
is Tops

IN DEPENDABLE PERFORMANCE!

● Only Mallory supplies genuine Fabricated Plate (metalized cotton gauze) capacitors for replacement.

It takes a superior capacitor to operate at 185 °F. and Mallory FP capacitors do it. Tests prove they perform consistently during 2000 hours of operation at a temperature of 185 °F. At lower temperatures, even longer!

Proof of this performance is found in the experience of one television manufacturer, who kept records of field failures for six months. Of 385,000 Mallory FP capacitors in service only six failed. Special design and meticulous production care make such records possible . . . by eliminating the major source of internal corrosion.

You can count on Mallory FP capacitors for longer shelf life—longer life in an inactive set—lower RF impedance—and ability to withstand higher ripple current.

Check these new improvements in Mallory FP capacitors . . . stronger anode tabs—withstand higher discharge currents—improved high surge separators—still greater heat resistance—extra heavy rubber seal—heavier cathode tab—special etched cathode.

And Mallory capacitors cost no more than ordinary capacitors . . . they're easy to install, and when they are installed they're dependable.

Mallory FP capacitors are manufactured under the following patents:

PS types are dry electrolytic non-polarized capacitors in round cases. Rated at minimum capacity value with plus tolerance of 20% unless otherwise indicated. Type PS furnished in moisture-proof molded plastic containers.

TERMINALS—MSG types are equipped with two capacitor terminals and two dummy terminals (for convenience in wiring). Two solder lug terminals are at one end of the PS types.

MOUNTING—MSG types mount in original clamps or boxes used for original capacitors. PS types may be mounted interchangeably in any original mounting for units of equivalent size. Type PS (except those marked*) may also be mounted by means of a plastic end cap (type PL) and sturdy metal snap-in type bracket (type HB) furnished separately when desired. See page 20 for these and other mounting hardware.

MALLORY PLASCAP*

. . . Made with amazing Mallocene!

APPLICATION—For use in R.F. bypass and coupling circuits in all television, AM, FM receivers and other electronic equipment. Especially suited for applications where small size and ability to withstand heat are paramount.

DESCRIPTION—Triple sealed plastic tubular capacitors. Unique impregnant results in stable capacity, low power factor and high insulation resistance over a wide range of temperatures. Will operate continuously at 85° C. Two bare tinned copper leads, one at each end, are sealed by MALLOCENE (exclusive Mallory plastic development). Each lead is fastened directly and solidly to the cartridge. The lead to outside foil is clearly marked. The Plascap is fashioned with a handsome yellow case bearing legible part numbers and ratings.

TERMINALS—Two bare tinned copper leads, one at each end.

MOUNTING—By means of their leads. This mounting is adequate due to the capacitor's small size, light weight and mechanical strength. If desired, TH clips of applicable size may be used. See page 20 for mounting hardware.

PACKAGING—10 to a card, 1 card per display carton. 25 and 50 bulk packaged per display carton.

THE SECRET OF MALLOCENE

There is only *one* logical way to build a molded type plastic tubular capacitor . . . with a plastic that sticks to the metal leads! But with ordinary construction methods, this has been impossible for such a plastic would stick to the mold!

Mallory engineers refused to put an inferior plastic tubular on the market. Instead, they set in motion the vast Mallory research facilities and called in top consulting specialists. The final result . . . Mallocene, the *one* perfect plastic for capacitors, exclusive with the Mallory Plascap!

Here's the secret. First, an extremely tough plastic shell is molded. The cartridge is carefully centered within this shell. Then, the cartridge is surrounded with Mallocene! When Mallocene hardens, it actually becomes part of the outer shell, and *sticks to the metal leads!* Thus, Mallocene provides a solid plastic tubular capacitor with the *first* moisture-proof construction!

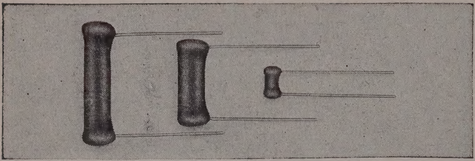
MALLORY CERAMIC CAPACITORS



Ceramic Capacitors

APPLICATION—The small size and rugged construction of these capacitors make them ideal for by-passing, coupling, and other AM and FM-TV applications. The general purpose types "UC" may be used in all receiver applications except frequency determining circuits. They are particularly suitable for general replacement of molded mica and paper tubular capacitors. The zero temperature coefficient types "ZT" are ideally suited for use in precision radio and electronic circuits where a truly stable capacitor unaffected by temperature change is required. Negative temperature coefficient types "NT" are designed for use in precision radio and electronic circuits requiring a negative temperature coefficient of capacity.

DESCRIPTION—All Mallory ceramic capacitors are of low-loss ceramic construction, having a dipped phenolic coating for maximum protection from moisture. Their small physical size makes them ideal for replacement purposes when space is at a premium. Type "ZT," while similar in construction to the general purpose types "UC" have the important additional characteristic that their nominal capacity rating is substantially unaffected by a change in temperature of from —55°C through 85°C.

Type "NT" have a negative temperature coefficient of capacity of 750 parts/million/°C. temperature change. As a matter of convenience, they are rated in micro-microfarads at a temperature of 25°C. A rise in ambient temperature above 25°C will result in a proportional decrease of rated capacity. With lowering of temperature an automatic increase of capacity will be observed. In practical applications these capacitors should be mounted adjacent to the circuit components which require capacity compensation.

TERMINALS—One radial bare tinned copper lead 1¼" long at each end.

MOUNTING—By means of their wire leads.

PACKAGING—Five capacitors per display carton.

Voltage Rating—500 V DC

IMPORTANT

General Noise Elimination Information

● All radio noise suppression devices should be applied at the source of the noise. Filters inserted in radio receiver cords are usually ineffective.

The filters described herein are, therefore, designed for insertion at the offending device. They incorporate many improvements accomplished through the extensive research and war production experience of the P. R. Mallory Company. While there will be some exceptions, most of the types of interference found in the home can be effectively reduced by the Mallory filters described. Unusual cases should be referred to the Mallory Engineering Department for advice.

Each filter is supplied with a complete instruction sheet for proper installation.

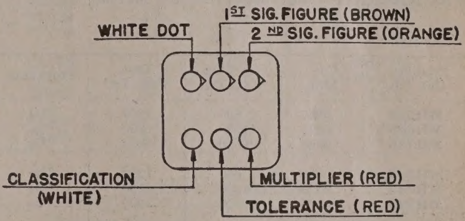
New RMA Color Code

● The new RMA color code, shown below, permits positive identification of the mica capacitors listed.

Reading across the top from left to right with the arrow pointing to the right, the first dot shall always be white to indicate standard RMA molded mica capacitor. The second and third dots become the first two significant figures in the capacitance. The second row is read from right to left. The lower right dot should be the multiplier. The lower second dot indicates the tolerance and the lower left dot indicates the class.

The key to color significance is as follows:



Example shown above = 1300 mmfd. ±2%, 500 V.W.

Note: When any Mallory mica capacitor has a white dot in the upper left hand corner (when the arrows point to the right) that capacitor is coded under the **new** RMA color code, as shown above. Any other color in the upper left hand corner indicates the **old** color code, which may be found in Catalogue No. 467-A.

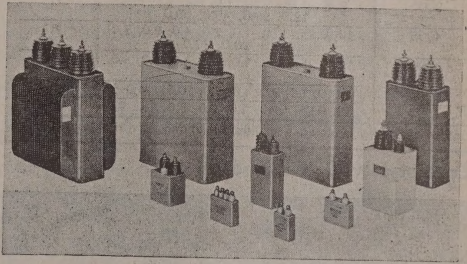
Capacitor networks



General Electric pioneered in the development of mineral-oil-treated paper dielectric capacitor networks for air, sea, and land radar, and was a prime supplier for the government services. The products supplied varied from the miniature types used with aircraft radar to the large land station designs.

All of the general facilities and the highly specialized test equipment involved are being retained for further work in this field and inquiries on new requirements are solicited.

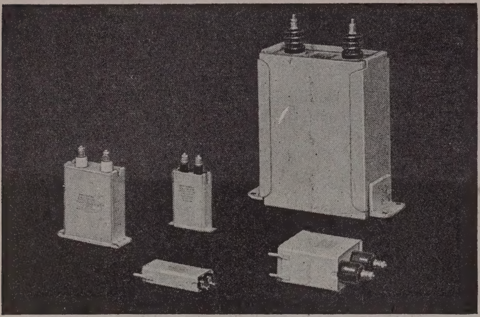
Case Style 70



Case style 70 units with various types of terminals and removable mounting brackets

These Pyranol fixed-paper-dielectric capacitors in case style 70 are hermetically sealed in rectangular cases. This line includes standard ratings, ranging from very small units weighing only three ounces to large high-voltage units weighing up to 175 pounds.

All are of single-section construction, with a capacitance tolerance of ±10 per cent. Cases are isolated and the two bushings are brought out through the cover. Units are available with either solder-lug terminals or with pillar-insulator terminals in 600-, 1000-, and 1500-volt ratings. All higher-voltage ratings have pillar-insulator terminals. These units may be operated in altitudes up to 7500 feet.

Bushings with solder-lug terminals are made of molded Textolite*, and those which have pillar-insulator terminals are of the highest-quality porcelain. All bushings are thoroughly bonded to the container to provide a permanent liquid-tight seal.

All units can be supplied with removable mounting brackets, as illustrated above. In addition to the screw-spade-lug brackets, two types of footed brackets are also available—one with a straight "L"-shaped foot and the other with a "U"-shaped foot that grips the bottom of the unit. The brackets can be attached to either the top or bottom of the unit, permitting either upright or inverted mounting.

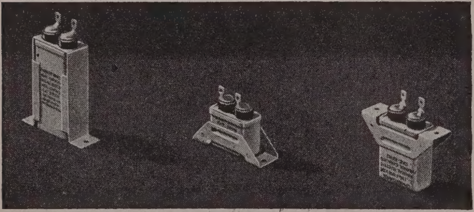
Case styles 60, 62, and 64



These small rectangular-case fixed-paper-dielectric units are of narrower width than the "bathtub" units, and will fit into a very restricted panel surface, where case height is not the limiting dimension. Mounting lugs, of either the removable or attached type, are of very sturdy construction.

All three case styles are constructed with solder-lug terminals, and are available in either single-section or two-section construction for all circuit diagrams. The metallic containers are hermetically sealed, and of deep drawn construction.

Case style 60 units have no brackets, but removable brackets of either the footed or screw-spade-lug type can be supplied, while the case style 62 and case style 64 units have soldered-on brackets for upright or inverted mounting, respectively.

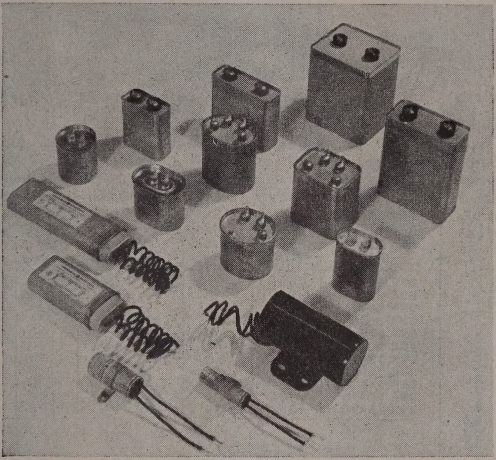
FOR GENERAL-PURPOSE A-C APPLICATIONS



Small a-c Pyranol capacitors are recommended for use with motors, luminous-tube transformers, industrial control, and other equipment.

The use of Pyranol as a treating material, because of its high dielectric strength, high permittivity, and exceptional stability, has made possible a marked reduction in physical size, as well as a capacitor far superior to those formerly available.

Design advantages

(1) Small and compact units, because of the use of Pyranol.

(2) Wide range of ratings available in rectangular, cylindrical and oval cases.

(3) Three styles of mounting brackets are available and supplied separate from the units. Units may be operated in any position.

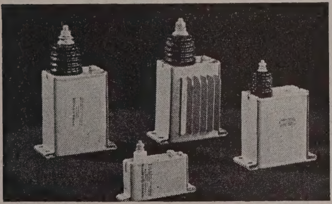
CAPACITORS FOR OSCILLATOR TANK CIRCUITS



This line of fixed-paper-dielectric capacitors has been developed primarily for grid and plate blocking service in the electronic oscillator circuits of high-frequency induction-heating equipments. They can also be used to advantage in other high-frequency oscillator circuits of a similar nature.

G-E high-voltage paper-dielectrics capacitors are of relatively high capacitance (0.01 mu f) for high-frequency units, and yet they are more economical than conventional high-frequency units of considerably smaller capacitance values. They can, therefore, be applied with savings in cost as well as reduced losses and lower voltage drop across the capacitor.

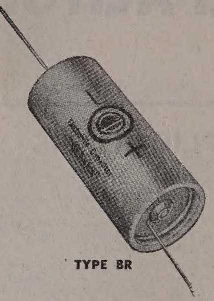
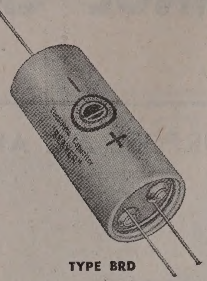
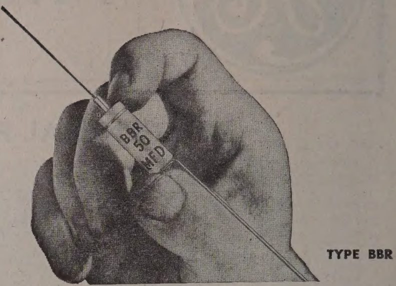
"BLUE BEAVER" ELECTROLYTIC TUBULARS



TYPE BR



TYPE BRD



TYPE BBR

Types BR and BRD "BLUE BEAVERS" are the most popular can-type electrolytic tubulars employed for all applications where capacitors are required for convenient mounting in small spaces beneath a chassis or connected directly in the wiring assembly. They are small in physical size and self-supporting by means of strong, bare tinned-copper wire leads. Larger sizes may be mounted with a metal strap.

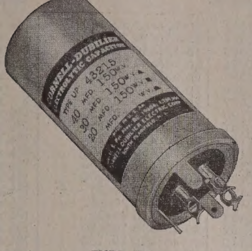
UP, UPT & UPE TWIST-PRONG BASE ELECTROLYTICS



TYPE UP

Type UP capacitors are small, conveniently-mounted, round can-type electrolytic units furnished with bakelite and metal mounting washers. Terminals are tinned for soldering.

They are dependable in operation over wide temperature variations with minimum capacity change.

Type UPT, "Hi-Temp", units are especially designed for use in television, auto radio, amplifier and other equipment where extremely high temperatures, voltage surges and ripple currents are encountered. They are particularly popular as replacement capacitors for all standard television receivers.§

Type UPE units are designed for use in selenium rectifier circuits. When using selenium rectifiers in television, radio or other equipment, care must be taken to employ only this type electrolytic capacitor and protective resistor–

TYPES UP, UPT AND UPE

SELENIUM RECTIFIER CAPACITORS

Type UPE are etched anode and cathode units especially engineered to prevent capacity drop due to high ripple and surge currents normally encountered in selenium rectifier circuits. *A protective series-resistor of approximately 50 ohms for a 100 ma. load, and at least 10 ohms for a 250 ma. load, should always be used to protect both the rectifier and filter capacitors.*

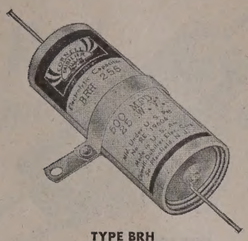
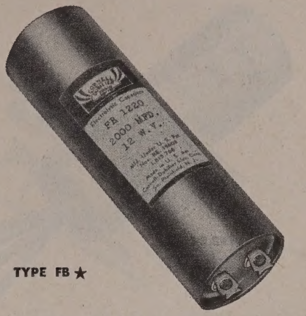
HIGH-CAPACITY LOW-VOLTAGE ELECTROLYTICS



TYPE BRH



TYPE FB ★

These compact tubular electrolytic capacitors have been especially designed for all applications requiring high capacity units operating in low voltage D.C. circuits. They are widely employed in portable radio power rectifying circuits, electric fence devices, telephone and D.C. timing circuits. Units are available in standard capacities and voltage ratings for all uses. Hermetically sealed in pure aluminum cans with an external cardboard insulating sleeve, these units are provided with metal mounting strap and bare wire leads for convenient wiring into any circuit assembly.

CORNELL DUBILIER

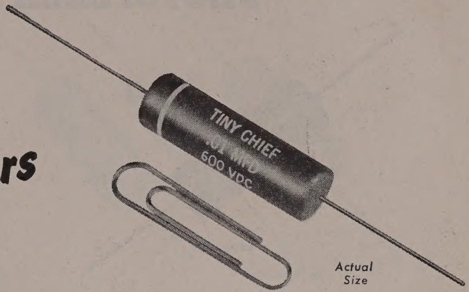
"TINY-CHIEF" MOULDED PLASTIC CAPACITORS

The New Smallest-Size All-Purpose Moulded Tubulars



Actual Size

Cornell-Dubilier "TINY-CHIEFS" are the roughest, toughest little capacitors ever offered servicemen for all types of television, auto radios, and other compact electronic equipment. They are moulded in an extra hard thermosetting plastic which has all the qualities and electrical characteristics required for long lasting all-around satisfaction. Tested at twice their specified voltage rating, they have been especially designed to maintain stable capacity values under severe conditions of temperature, humidity, and physical stresses. Bare wire leads are firmly connected to the capacitor section, imbedded in the hard plastic casing and will not pull out.

FEATURES OF C-D "TINY-CHIEFS"

• MECHANICAL •

Section and leads embedded in a red-colored solid thermosetting plastic.

A plastic material which has a cured tensile strength of 3,500 pounds per square inch. It will not soften on heating even up to 400°F.

Low pressure forming does not injure sections.

Leads held in exact center during embedment.

Leads tightly held and sealed by plastic housing.

Fast curing plastic does not expose section to a long cycle of high temperature.

No end fill to melt.

Each group size held to exact dimensions.

Tinned copper wire leads readily soldered.

Plastic will not melt when touched by soldering iron.

No surface wax.

• ELECTRICAL •

High quality specially developed materials provide long service life.

Cured plastic body provides excellent electrical insulation.

Body seal provides long humidity protection.

Leads soldered directly to foils of non-inductive section.

Lead size as below:

Capacitor Diameter	Lead Wire Size
5/16 - 3/8	#22
7/16 - 1/2	#20
5/8 - 1	#18

Temperature range —40°C. to +85°C.

Specified test voltage is two times rating. Power factor ½% - 1%.

Insulation resistance 2,000 megohm mfd. or 10,000 per unit, whichever is lower.

STANDARD CAPACITY TOLERANCES

Mfd.	Tolerance
1.0	+30% — 10%
.1 to .9	+40% — 10%
.01 to .09	+40% — 20%
.0005 to .009	+60% — 20%

Other tolerances available +20% and — 10%.

Permanence of capacity excellent due to solid plastic embedment.

New plastic will not track on arcing with excessive voltage.

Capacitor stamping indicates capacity, voltage, and outside foil.

Cornell-Dubilier improved, self-healing, metalized paper capacitors have better electrical characteristics and extra long service life. "PUP" units are light, compact with an operating temperature range of —40° to 60° C. without derating. Bare wire leads securely anchored in metal end-caps, wax-impregnated and dip-sealed against humidity. All units are extended foil—non-inductive wound for low impedance at high frequencies, have high insulation resistance, low power factor and small capacity change with temperature and life.

"METAPUPS" are one piece metal tubular cased, pressure sealed by spin-over on synthetic rubber gaskets. The operating temperature range of these units is —55° to 95° C. For temperatures higher than 60° C. voltage derating is necessary.

"SEALPUPS" are the highest quality metalized paper capacitor design for smallest size and positive seal against moisture. They are especially recommended for high grade military and commercial equipment.

For further data on C-D metalized capacitors, write for Bulletins 142-3-4.

FEATURES OF "TINYMIKE" DISC-TYPE CERAMIC CAPACITORS

- **Small, space-saving and lightweight.**
- **Available in all popular capacities.**
- **Guaranteed minimum capacity tolerance.**
- **Adapted for wide variety of applications.**
- **Minimized eddy current losses due to construction.**
- **Low inductance, stable, dependable performance.**
- **Available with temperature compensating characteristics.**

C-D "TINYMIKES" are small, space-saving and lightweight, making them ideal for cramped chassis layouts. So light . . . far lighter than other capacitor types having equivalent electrical rating. Diminutive but easy-to-handle size, and parallel leads, permit easy, fast insertion to connections in tight assemblies, reducing labor cost while increasing productivity. Low cost of "TINYMIKES" shows direct saving over most other capacitor types of equivalent electrical ratings. Guaranteed Minimum Capacity over a temperature range of +10° C. to +65° C.

Minimized eddy current losses due to construction with only a single pair of silver electrodes per capacitor. Leads firmly solder-connected directly to the complete active area of capacitance provide positive contact.

Short current path and parallel leads reduce inductance to an unusually low level, the amount depending on lead length. Accurately positioned, parallel leads provide convenient connections. Excellent control of dielectric composition and manufacturing processes assures low power factor, high dielectric strength and high insulation resistance.

Constant, dependable service further assured by C-D quality construction such as firm bonding of high-purity silver electrodes to the flat ceramic disc, and soldering of the leads. Protected against effects of humidity by use of special phenolic coating and high-temperature wax impregnation. The coating also protects against grounds caused by contact with nearby components.

For quick identification all units of 1,000 mmf. (.001 mfd.) and higher are stamped with decimal in MFD.; units under 1,000 mmf. are stamped with whole number in mmf.

C-D has developed a special line of Temperature Compensating ceramic capacitors that offer the utmost in high stability, low drift, low power factor, high Q, high insulation resistance, and low inductance. C-D manufactures its own ceramic capacitor bodies under the strictest electronically controlled quality supervision which results in the desirable features inherent particularly in the temperature compensating types.

New, superior design and construction . . . with greater electrical advantages, dependability, and longer life than ever before achieved in TV high-voltage ceramic capacitors!

An original C-D engineering job inside and out . . . backed by C-D's decades of experience with high-voltage ceramic capacitors. These TV High-Voltage "MITYMIKES" will withstand higher peak voltages, and can be used at *full rated voltage*, as they are *conservatively* rated for DC Flash Test up to 1½x to 2x rated DC Working Voltage, as listed.

This generous factor of safety, due to the unique C-D design, assures long life and constant, dependable service with no deterioration in the ceramic composition despite the severe high voltage stress in TV operation.

High-purity silver electrodes are heat-bonded to the ceramic dielectric. The silver-plated brass terminals (or the #18, .040", tinned wire leads) are firmly solder-connected direct to the silver electrodes. The C-D ceramic design effectively reduces corona to a minimum, and in combination with the ceramic composition provides high insulation resistance and low power factor. The ceramic body is manufactured under strictest Quality Control standards to insure uniformity of physical and electrical characteristics in the finished capacitor.

Choice of terminal styles is shown in photos and outline drawings . . . every type to meet TV assembly requirements. Any combination of the above A, B, C, D, E or F terminals, can be furnished on order.

"MITYMIKES" are ideally suited for filter, bypass, and blocking, in TV high-voltage power supplies; in filter circuits employing cathode ray tubes; and in other applications, stationary and mobile equipment, where high-voltage rectified power supplies are used. These units can also be used to obtain higher voltages by means of series connections.

Capacity tolerance: +50%-20%. Power Factor: 1.5% maximum at 1 mc. or 1 kc. Leakage Resistance: 7,500 megohms minimum. Outer coating is distinctively colored for easy identification. All units are clearly stamped with capacity and voltage and are impregnated with high-temperature wax for additional protection against moisture absorption.

Notes On Ordering Special Units

The listing above gives range of capacities which are available from stock. Intermediate capacities, not exceeding the maximum as listed for each type, can also be furnished upon request.

Standard capacity tolerance is 5%. Also available, on special order, in tolerance ratings of plus or minus 3%, add 10% to list prices, 2% add 15% to list prices and 1% add 25% to list prices, (or within 1 mmfd.—whichever is greater). All types can also be supplied in plus or minus 10% and 20% tolerances at lower prices.

*Reg. U.S. Pat. Off.

★When JAN-C-5 units must be supplied, order according to specific CM type designations listed in C-D Mica Capacitor Catalog No. 422.

Notes on Ordering Special Capacitors

Type No. Suffix	
	STANDARD TOLERANCE is plus or minus 10%. Also available on order in plus or minus 5% and 2%. For capacity tolerance of: 5% add 15c to list prices; 2% add 40c to list prices.
"L"	MOULDED IN LOW-LOSS BAKELITE available on order. Add "L" to Cat. No. (example: 4L-22060; 9L-11010). Add 25c to list prices.
"S"	SPECIAL SALT WATER IMMERSION SEAL AGAINST HUMIDITY. To order, add "S" to Cat. No. (example: 4S-53010; 9S-12050). Add 10c to list prices.
"T"	HEAT AGEING TREATMENT for stabilizing capacity over extremely wide temperature changes, minus 40° C. to plus 70° C., furnished on special order. Add "T" to Cat. No. (example: 4T-12010; 9T-21020). Add 15c to list prices.
"LST"	TO ORDER A COMBINATION OF ABOVE FEATURES, add letters specified to Cat. No. (example: 4LST-12040; 9LST-13020). Add 50c to list prices.
	INSULATION RESISTANCE—Brown Bakelite, 20,000 megohms per unit—Low-Loss Bakelite, 40,000 megohms per unit. Low-Loss Bakelite provides higher Q and lowers the power factor.
"4E"	SMALL METER BRACKETS adapted for Weston Model 301 meters, add "E" to Cat. No. (example: 4E-22050). Add 20c to list prices.
"9A"	UNTAPPED MOUNTING HOLES. Standard units are tapped for 6-32 and furnished with round head screws. For untapped mounting hole, .144" diameter (No. 6 clearance), add "A" to Cat. No. (example: 9A-11030).
"9F"	HIGHER VOLTAGE CONSTRUCTION, rated 6,000 v.d.c. test, 3,000 v.d.c.—1500 v.a.c. operating. Capacity range limited. Moulded in low-loss Bakelite, BM 262. The thickness of these units, or "A" dimension, is 7/16" for capacities up to .002 mfd. and 3/4" for capacities from .0022 to .005 mfd. max. To order, add "F" to Cat. No. (example: 9F-63050, the numeral "6" designating 6,000 volts test). Prices of "9F" units are double the list prices shown.
"9R"	HIGH STABILITY UNITS — Special high stability units, comprising low-loss Bakelite, BM 262, temperature aged and sealed construction for use as low power master oscillator tank capacitors or accessory positions. These units are fixed and permanent in characteristics, having a capacity-temperature coefficient of approximately plus .003% (30 parts per million) per degree C. To order, add "R" to Cat. No. (example: 9R-52020). Prices of 9R units are double the list prices shown.

QUIETONES FOR USE ON INDUSTRIAL AND HEAVY-DUTY ELECTRICAL EQUIPMENT

Most satisfactory results are obtained when Quietones are installed at the source of the radio noise. This is because the high frequency disturbances caused by appliances are carried by the power lines.

A Quietone installed on an appliance corrects noise in all radio receivers, your neighbors, as well as your own.

CAPACITOR ANALYZER

The Model BF-50 Capacitor Analyzer quickly and accurately measures all important characteristics of all types of capacitors. It offers the most accurate and thorough capacitor test of any instrument of its type, and may be operated on any 110-volt, 50-60 cycle power line.

The analyzer will determine the true condition of all paper, mica and electrolytic capacitors, including A.C. motor starting types.

Features of Model BF-50 Analyzer

1. Measures Capacity—Accurately measures capacity of paper, mica, air, electrolytic and motor-starting capacitors from .00001 to 240 mfd.
2. Measures Power Factor—Measurements of power factor from zero to 50 percent on all types of electrolytic capacitors including motor-starting types.
3. Employs Wien Bridge—Assures permanent accuracy of capacity and power factor measurements. Readings not affected by line voltage variations.
4. Indicates Insulation Resistance—Insulation resistance measurements of paper and mica capacitors up to 1500 megohms. Also measures many types of insulation.
5. Indicates Leakage—Measurements of leakage of electrolytic capacitors by means of built-in direct current power supply.
6. Visual Eye Leakage Indicator—Provides simplified and reliable leakage tests on all types of capacitors. Enables measurements to be made rapidly.
7. Detects Defective Capacitors—Character measurements, such as leaky, shorted, open, high and low capacity, and high power factor on all capacitors.
8. High Sensitivity on All Measurements—Amplifier for capacity, power factor and leakage tests provides sharp and accurate readings. Amplifier built-in Analyzer.
9. Balance Sensitivity Control—Provides sharp or broad balances for quick and accurate readings. All readings are made simply and directly.
10. Direct Reading Linear Scale Calibration—Provides simplified measurements. All scales on panel uniformly spaced, easy to read, thus avoiding possible errors in using multipliers or charts.
11. Push-Button Switching—For convenient and simplified adjustments, all tests and circuit changes are made by means of modern push-button switches.
12. Visual Eye Bridge Balance—Visual detector gives positive indication of bridge balance for convenient, simplified and accurate capacity and power factor measurements.
13. Six Color-Coded Scales—Accurately calibrated, six color-coded scales. Uniformly spaced over total spacing of sixty inches. Easy to read. No "blind" spots.
14. General Purpose Instrument—May be used to check continuity capacity between circuits, insulation of transformer windings and other types of coils, etc.
15. Self-Contained—Portable—An instrument complete in itself, requiring no external standard, headphones, meters or accessories. A portable unit, for 110 volt, 50-60 cycle operation, supplied in walnut cabinet, removable cover, with carrying handle. Size, 6½ x 12 x 9¾ inches. Weight, 9 pounds.

SPECIAL PRODUCTS

PULSE FORMING NETWORKS

Plasticon Type TS and LS Pulse Forming Networks are the smallest and lightest PFN's available. Type TS PFN's can be made for 150° operation; Type LS Networks operate up to 75° C.

Plasticon PFN's are furnished in metal containers and in our Glassmike style.

ZERO TEMPERATURE COEFFICIENT PLASTICONS

Relatively large capacitances of .01 mfd and up are supplied with temperature coefficients ranging from minus 1,000 ppm/°C to plus 1,000 ppm/°C. Temperature range for Type AL (SC) is minus 65° C to plus 85° C.

DISCHARGE, OR ENERGY STORAGE CAPACITORS

Plasticons are supplied for spark discharge, photoflash, pulse-coupling condensers, etc. Due to the low losses and high breakdown voltage, Plasticons are the lightest, smallest discharge capacitors made.

HIGH RESISTANCE AND "COMPUTER" PLASTICONS

In addition to our Laboratory Grade Capacitors shown on this page, other high resistance-low absorption Plasticon types are available. Types PA and TA Capacitors are used in computers operating at higher temperatures. Type FA can be supplied with resistances as high as 10^{15} ohms at 2000 volts.

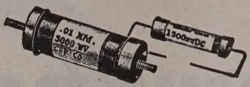
RF CAPACITORS

In addition to the 3500 volt RF Glassmikes shown on this page, Plasticon Type LSG and TSG Glassmikes are made for RF operation up to 28,000 volts. These Glassmikes are less expensive, are smaller and lighter, and more available than mica capacitors.

POWER FACTOR CORRECTION CAPACITORS

Plasticon Type LSC Capacitors are made with power factors as low as .00018 at 400—2800 cycles. Their heat losses are so negligible that amazingly small and light high voltage AC capacitors are produced.

GLASSMIKES ASG



Type ASG are Plasticon A dielectric-silicone fluid impregnated capacitor elements in hermetically sealed glass tubes. Temperature range — 60° C to + 125° C. The smallest and lightest high voltage capacitors made. Type ASG are ideal for DC and low frequency AC applications.

LABORATORY CAPACITORS

Type LAG (Glassmike style) and Type LAC (Rectangular can) have the lowest dielectric absorption of any capacitor made. Residual charge is .01 — .02%. Dissipation factor at 1 MC is .0002 to 0003. Capacitance and Q is constant from DC to 100 KC. Resistance averages one million megohms per microfarad. Standard capacitance tolerance is ± 5%. Type LA units are used for timing and integrating circuits.

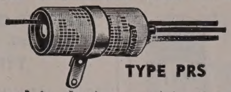
TUBULAR ALUMINUM CAN DANDEES*



TYPE PRS

Tubular units encased in aluminum containers especially suited for compact assemblies. The higher voltage listings meet the new radio and electronic circuit potentials, particularly in cathode-ray applications like television receivers and oscillographs.

PRS units are normally supplied with etched foil but plain foil is available. High-purity aluminum construction. Vented for excessive gas pressures. Dual, triple and quad units supplied with insulated standard wire leads and mounting bands. Single element units have solid wire leads. Sizes indicated below are for units with outer insulating tube.

TUBULAR LO-VOLTAGE TYPE 84

Lo-voltage, type 84 units are wax-impregnated, wax-sealed capacitors in paper cases, used for non-critical applications such as in home and auto radio receivers where they perform satisfactorily. These capacitors are available with HYVOL H impregnation for operation at temperatures up to 85°C., and for lower voltages at higher than 85°C. For over 600 VDC, units are available with HYVOL M impregnation. Type 84 capacitors, with HYVOL M impregnation and at ratings less than 600 volts, are slightly larger than those listed. Sizes available upon request. Units are obtainable with a radial mounting band on request at extra cost.

COMPACT HYVOL* CAPACITORS

TYPE 18CB

Compact, immersion-proof unit, smaller in height and depth than Type 16. However, greater width makes Types 18 adaptable for applications where small-sized dual- and triple-element capacitors with three terminals are required. Different base sizes make units adaptable for duals and triples. Even on single sections, different base sizes makes unit fit in particular applications where Type 16's do not fit. Type 18CB is standard, but Type 18CT (terminals on top) also available.

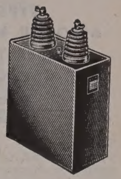
HIGH VOLTAGE TRANSMITTER CAPACITORS

TYPE 20



High quality oil-capacitors designed to meet the exacting service requirements of communications and electronic equipment, and general DC applications in industrial equipment. Single capacitors or parallel grouped capacitors available in ratings from 6000 to 50,000 VDCW. These units consist of precision wound, adequately insulated sections connected in parallel and assembled in heavy, welded copper bearing steel tanks, designed to expand or contract with changes in temperature. Finished in long lasting dark grey lacquer. Heavy duty, wet process porcelain insulator assemblies are gasketed, pressure sealed, and oil-filled to prevent internal creepage and corona. The assembled units are heat vacuum dried, vacuum impregnated with Aerovox Hyvol and hermetically sealed for long life under exacting operating conditions. Single units rated at 30 KV or less are normally supplied with the capacitor element insulated from ground. Type 20 units not carried in stock but are built to order. Submit full application information when ordering.

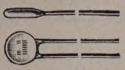
HI-Q DISK CAPACITORS



Hi-Q Disc Ceramic Capacitors are high dielectric by-pass, blocking or coupling capacitors. In many instances, their geometrical shape is more adaptable to space saving than are tubulars for comparable capacity. Multiple capacities can be fabricated on a single disc and serve to eliminate two or more conventional units.

Characteristics of the basic dielectric material are identical to those of Hi-Q BC Capacitors. The well-proven Durez and high temperature micro crystalline wax coating insures the utmost protection from moisture and high humidities. The high silver content electrodes, fired directly to the low loss dielectric, make noiseless performance a certainty.

Leads are pure dead soft copper, tin coated to provide good soldering connections and so placed that close connections are easily made, thus reducing inductance to a minimum, a highly desirable feature in high frequency design such as television and FM circuits.

HI-Q ZERO TEMPERATURE COEFFICIENT CAPACITORS

The temperature coefficient of ceramic capacitors is an inherent characteristic of the ceramic body. By controlling this coefficient, the use of ceramics has been extended to countless applications in the electronic and communications fields. Temperature coefficient is determined by the ceramic mix and therefore certain tolerances are standardized. Following is a list of standard recommended tolerances used in this listing:

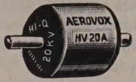
Temp. Coef.	Tolerance—PPM
NPO	±30
N080	±30
N750	±100

The tolerances shown are maximum deviation. The actual average temperature coefficient usually runs close to nominal.

NPO TYPE SI

The zero temperature coefficient is the most stable ceramic commercial capacitor available. The type SI is a tubular ceramic insulated with a synthetic coating (Durez) and impregnated with a high-melting point, Low-loss, microcrystalline wax.

HI-Q HIGH VOLTAGE CERAMIC CAPACITORS TYPE HV



The new type HV ceramic is built to handle high voltages at high humidity and temperatures. It has a high potential electrode design and a newly developed plastic jacket which has exceptional arc resistant qualities. The silver electrodes are fired to the base and are integrally soldered to the silvered brass terminals for positive contact.

Type HV units provide an excellent working parameter when used with the new horizontal output transformer design. Combining high voltage, small size, and three types of terminal connections, HV units will fit virtually any high voltage or television application.

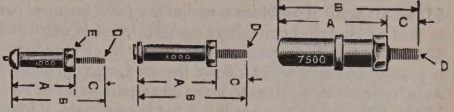
HI-Q STAND-OFF CAPACITORS



Hi-Q "stand-off" capacitors are tubular with a screw fixture for mounting to the chassis or common ground. Close coupling and their unique construction make them an excellent choice for bypassing R.F. in the high frequencies.

The multiple tapped model is a compact, bypassing unit when mounted next to tube sockets. Three capacities can be supplied as one unit, with capacity ranges available up to 2000 MMF per section. When fewer than three taps are required, it is possible to obtain higher capacities. Standard capacity tolerance is ±20% and GMV for "stand-off" capacitors and —20%, +30% and GMV for multiple tap units. Closer tolerances are available on the lower capacity units wherever economical manufacturing permits.

All units are flash tested for 1000 V.D.C., power factor is under 3% maximum and the insulation resistance is above 7500 megohms. All units are coated with a polymerized high temperature enamel, stamped for capacity and supplied with a nut, if desired. Leads are 20 gauge and a minimum of 1½″ long for CS units and 1¼″ for CIS units.

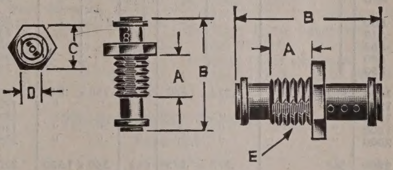
HI-Q FEED-THRU CAPACITORS



Hi-Q Feed-Thru Capacitors provide means to transmit thru shields or ground potentials and simultaneously by-pass unwanted frequencies. A good mechanical connection is provided by the silver-plated bushing. These are excellent dependable units even under severe mechanical vibrations as in aircraft, missiles and automotive requirements.

The minimum standard tolerance for feed-thru capacitors is ±20%. All units are flash tested at 1000 volts D.C.

HI-Q TUBULAR CERAMIC CAPACITORS

STYLE SI: Style SI provides a radial lead unit for applications requiring an insulated capacitor. Performance is comparable to that of insulated capacitors manufactured in accordance with JAN and REC specifications.

STYLE CI: Tubular ceramic capacitors, in three standard sizes, insulated with a ceramic (Steatite) cover-tube sealed with a special end seal which allows the wax, vacuum impregnant to enter and thoroughly fill all voids inside the cover tube. Axial leads in three sizes to meet all requirements of the JAN C20A specifications for insulated capacitors.

STYLE CN: Style CN is not listed but is available. It identifies the non-insulated tubular ceramic capacitors as established by the Armed Services Electronics Standards Agency (JAN C20A) and (RMA, REC107) specifications. This style capacitor has radial leads and is coated with a high moisture proof, low factor, non-hydroscopic styrene resin.

Mica Capacitors

For most critical applications where precise capacity values must be attained and maintained, AEROVOX silvered mica units are generally available. Encased in red molded XM bakelite. Similar in external appearance to standard bakelite molded mica units.

Unique construction. Only plus .0022 per degree F.—a remarkably low temperature coefficient. Excellent retrace characteristics. Practically no capacity drift with time. Exceptionally high "Q". Mechanically protected against physical damage and changes in electrical characteristics due to varying atmospheric conditions. Wax impregnated externally. Ideal for use in circuits where inductance and capacity product must remain constant under all operating conditions. Specifically designed for use in push-button tuning, oscillator padding circuits, fixed tuned circuits, and as capacitance standards, etc., where accuracy and stability are of prime importance.

Standard tolerance ±5%. For ±20% deduct 10% from price. For ±10% deduct 5%. For ±3% add 10%. For ±2% add 15%. For ±1% add 25%.

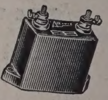
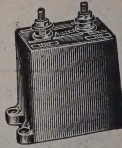
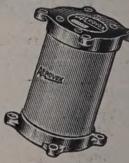
MICA TRANSMITTING CAPACITORS



Extra-heavy-duty Capacitors for
- **Commercial Communication Companies**
- **Broadcasters**
- **Builders of Quality Radio and Electronic Equipment**
- **Amateurs, Experimenters**



With these capacitors Aerovox is contributing its share towards narrowing still more the small remaining gap between professional and amateur radio practices.



Due to the normally limited demand for these extra-heavy-duty mica capacitors, as well as the considerable number of capacitance and voltage ratings in which they are made, this line is made to special order. However, your Authorized Aerovox Jobber is now able to order these commercial-grade capacitors for you.

Consult your Aerovox Jobber for specifications and quotations.

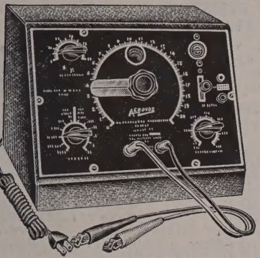
Test Instruments



AEROVOX CAPACITANCE AND RESISTANCE BRIDGE

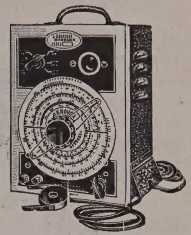
AEROVOX MODEL 76 Resistance Capacitance Bridge is the new postwar general-utility instrument combining simplicity of operation, remarkable degree of accuracy, and modest price. Extreme ruggedness makes it equally suitable out on the job, in the shop, or in the laboratory.

Sloping panel 10″ x 6″. Aluminum, etched and anodized. Steel cabinet, black crackle finish. All readings taken from main 4″ dial. Same calibrated scale eliminates trouble and chances for errors in reading. Linear scale, also an exclusive feature, means no crowding at high end to make readings difficult and inaccurate. Both the resistance and the capacitance readings are covered by six overlapping ranges, as against two or three in usual service instruments, for maximum sensitivity and accuracy. Positive "magic eye" indicator.

Here is what Model 76 bridge does: (1) Measures capacitance from 100 mmf. to 200 mfd. in six ranges. (2) Measures resistance from 10 ohms to 20 megohms in six ranges. (3) Measures power factor from 0 to 50%. (4) Provides D.C. polarizing potential for leakage measurements, from 0 to 600 V. D.C., continuously variable and calibrated in volts. (5) Checks leakage or insulation resistance.

Instrument is provided with shockproof, color-coded test leads fitted with banana plugs for panel jacks, and with clips. Instructions. Measures 10″ x 7¾″ x 8¼″. Weight 8 lbs. 3 oz.

AEROVOX L-C CHECKER



★ This exclusive Aerovox development has no counterpart, much less an equal. Basically, it determines the effectiveness of any capacitance or inductance while actually connected in its circuit. Testing efficiency is greatly increased. Components may be tested singly or in combinations whereby to determine resonant frequency and effectiveness of given circuits. Circuit or systems may be adjusted by this checking means for proper operating efficiency. Certainly a "must" instrument for the radio worker.

HERE'S A PARTIAL LISTING OF WHAT THE AEROVOX L-C CHECKER DOES:

It checks capacitance of capacitors at radio frequencies **without removing them** from circuit. • It checks alignment of r.f. circuits; also tracking of super-het. oscillator. • It checks alignment or broad or narrow band i.f. amplifiers. • It checks the tuning of wave traps and of image-rejection circuits; frequency ranges of receivers; frequency ranges of signal generators; calibration of wave meters. • Identifies harmonics of frequency standard in precision frequency calibration of radio equipment. • It checks natural resonant points of r.f. chokes making sure they are beyond operating range. • It traces resonant absorption trouble in "all-wave" receiver circuits—locating dead spots, etc. • It locates resonant points in shorted windings (unused coils) in multi-range oscillators, etc. • Locates resonant frequency of r.f. coupling chokes, making certain of placement to secure enough gain balance over tuning range of r.f. stage. • It checks natural period of antennae and transmission lines in order to have resonant peaks at certain frequencies. • It checks quartz crystals for frequency, false frequency, operation at harmonics, and for activity. • Checks FM i.f. transformers. • Checks alignment of FM i.f. channels. • Checks leakage of paper capacitors. And it checks many other functions when used with auxiliary equipment. This checker operates from AC or from DC 120 volts source. It has a frequency range from 100 KC to 44MC as follows:

Range:

A — 75 — 225 KC
B — 200 — 600 KC
C — 550 — 1650 KC
D — 1.5 — 5 MC
E — 4.5 — 14.5 MC
F — 13 — 44 MC

Capacitance Range: .0002 mfds. — 2 mfd.

Inductance Range: 0 — 500 MH

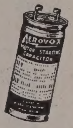
Tube Complement: 6C4, 25Z6, 6E5, VR150

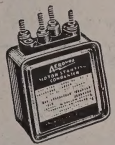
Accuracy: Capacitance and Inductance ± 10%

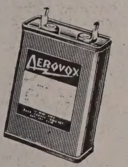
Frequency Ranges A, B, C: ±2%
D, E, F: ±5%

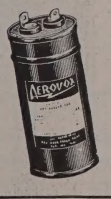
Dimensions: 10½ x 7½ x 5½

Weight: (shipping) 6 lbs.





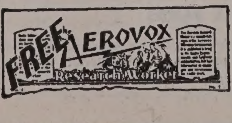




A TYPE FOR EVERY APPLICATION

AEROVOX Motor-Starting CAPACITORS

Aerovox motor capacitors are vailable in two general categories: (1) **Exact-Duplicate Replacements,** precisely matching the mechanical and electrical features of the original equipment; and (2) **Universal Replacements,** for a minimum stock of numbers taking care of the maximum range of motor applications. Exact-Duplicate Replacements do the "same-as-new" service job insisted upon by critical customers. Universal Replacements mean maximum convenience with minimum investment. And of course Aerovox also supplies the hardware — housings, caps, mountings.



A snappy, informative, practical engineering paper, issued monthly, the AEROVOX RESEARCH WORKER is free to servicemen, engineers, hams, and other interested radio workers. Ask your AEROVOX jobber how you may subscribe, or write direct.

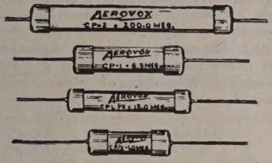
Aerovox *Carbofilm* Resistors



Precision Resistors Made With Matchless Accuracy

Made under licensed agreement with Western Electric, these precision resistors are the result of years of intensive research in developing components with extreme accuracy and stability. Carbofilm resistors are intended for circuits calling for the accuracy and stability of wire-wound resistors with the marked economy of carbon resistors. They serve a real need in test equipment and laboratory instruments. All in all, Carbofilm resistors meet the requirements of accuracy, stability and economy.

The Carbofilm resistors are a carbon deposit type and are available in the following standard or jobber stock size with the resistance value shown in the listing.

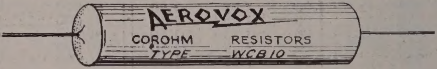
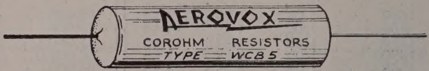
AEROVOX COROHM WIRE-WOUND RESISTORS





Corohms are ceramic-case wire-wound resistors combining exceptional resistance accuracy and stability with ample wattage rating to handle real loads and overloads.

The ceramic casing means a thoroughly insulated resistor that can be mounted directly against chassis or other metal body without grounding or shorting. Also, there is a minimum danger of accidental shock.

Essentially designed for circuits where a relatively high degree of resistance accuracy is required along with extra ruggedness. Its superior sealing means that it can be used in assemblies subjected to extremes in humidity, heat, salt air and other adverse climatic conditions.

They are available in any quantities through Aerovox distributors. Standard and stocked items are in the 5- and 10-watt sizes only, and in popular resistance values as listed.

Tolerance WCB5— 5 to 20 ohms ± 20% — 25 to 40 ohms ± 10% — 50 to 1,000 ± 5%

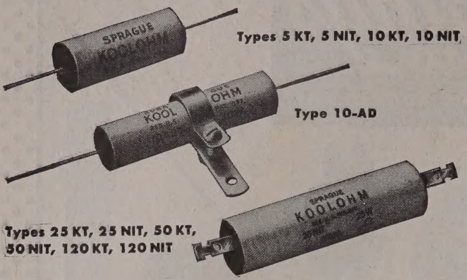
SPRAGUE RESISTORS

KOOLOHM® WIRE-WOUND RESISTORS



Types 5 KT, 5 NIT, 10 KT, 10 NIT
Type 10-AD
Types 25 KT, 25 NIT, 50 KT, 50 NIT, 120 KT, 120 NIT

- Wound with wire which is insulated **before winding** with a flexible ceramic coating. This coating is impervious to heat as high as 1000°C.
- Each resistor is "tropicalized" by a glazed ceramic outer coating and new type end seals which offer complete protection against moisture or any other climatic conditions
- May be mounted anywhere—even flat against chassis or grounded parts
- Extremely high insulation resistance—10,000 volts from surface of ceramic jacket to inner resistance elements
- Insulated wire permits winding higher values in layers, which means much smaller physical sizes for each wattage rating
- Insulated wire permits true "non-inductive" wound designs

NOTE: ALL NIT TYPES ARE NON-INDUCTIVE

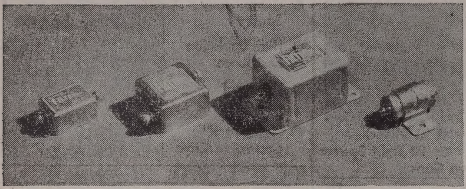
FILTEROL® TYPES



Filterol 1 Filterol 2 Filterol 3 Filterol 4

- Suppress Man-made Radio and TV Interference
- Small, Completely Self-contained
- Quickly, Easily Installed

Filterol Types 1, 2, and 3—Designed for connection in series with power supply lines to interference-producing devices . . . A 3-terminal network with the case as one terminal . . . The selected filter should have a rating higher than the continuous operating current of the offending device . . . A single Filterol connected to the high side of the line is usually sufficient . . . In severe cases a Filterol in each leg of the power line may be necessary . . . For three or four-wire systems, a Filterol in each wire is necessary.

Filterol Type 4—A new, exclusive Sprague development incorporating a Sprague HYPASS® Capacitor . . . Provides exceptionally high attenuation at frequencies above 5 megacycles . . . Intended for small devices with continuous current ratings up to 20 amperes.

IF TYPES

IF-15 IF-11 IF-21 IF-S1 IF-37

IF-15—TRIPLE-SECTION FILTER for all small motor-operated devices such as food and drink mixers, vacuum cleaners, fans, drills, etc. Especially designed to prevent accidental shocks from discharge of filter capacitors.

IF-11—DUAL HIGH-CAPACITY FILTER with completely enclosed safety construction. Designed for use on motors over 1 horsepower and up to 220 volts AC or DC. Also used on high-current arcing or sparking devices.

IF-21—COMPACT DUAL FILTER for use across brushes of fractional horsepower motors with the can grounded to motor frame. May also be used across line terminals of motors.

IF-S1—SINGLE SECTION 2-LEAD FILTER with can completely insulated. For use across make-and-break contacts, such as thermostats, circuit breakers, door-bells, buzzers, relays, etc.

IF-37—3-SECTION DELTA-CONNECTED FILTER especially designed for fluorescent fixtures. Only one IF-37 required for each offending fixture. Also effective on make-and-break governor-type motors. Underwriters' Laboratories approved.

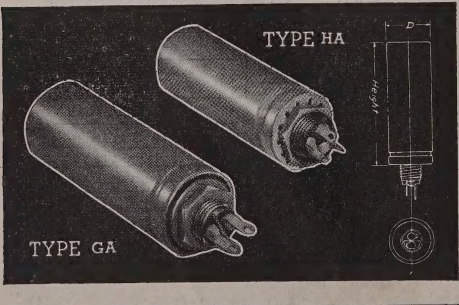
TYPES "GA" and "HA" OIL FILLED

These inverted mounting capacitors fill a definite need where chassis space is the prime factor.

Types "GA" and "HA" are INCCO Oil "A" impregnated and filled.



The case is a one-piece metal extrusion with a "locked-in" molded neck. This construction meets and surpasses the Army and Navy requirements for a submersion-proof capacitor.

Type "GA" is available in the seven standard rating listed below, but can also be supplied in other capacities and/or voltages to manufacturers' specifications.

In the standard "GA" and "HA" types the container is insulated. A grounding lug can be supplied for connecting one terminal to the case. Fiber washer for insulating container from chassis, when case is grounded, and insulating cover for insulating the container from adjacent equipment, can also be supplied on special order.

Type "HA" differs from "GA" in container and mounting neck size, and also in the fact that it has three insulated terminals. Primarily, type "HA" is supplied to manufacturers specifications, to meet special requirements of multiple-section and multiple-terminal capacitors, with either insulated or grounded container.

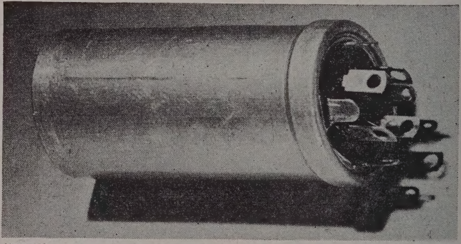
ET SERIES ELECTROLYTIC CAPACITORS



"ET" series capacitors have been designed for ease in installation and reliability. They are constructed to withstand the most severe operating conditions encountered in industrial and electronic equipment. Especially controlled manufacturing processes insure that the equipment in which these capacitors are used will function without interruption. Capacitors can be supplied for operation at temperatures ranging from minus 40 to plus 85 degrees Centigrade. Mounting is effected by inserting the capacitor through the slots in either the chassis or mounting plate, and twisting the mounting prongs 90 degrees.

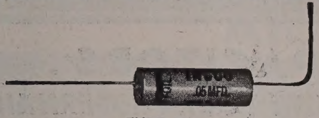
TUBULAR PAPER CONDENSERS



TYPE PT

INDUSTRIAL By-Pass Capacitors are non-inductively wound and designed for maximum efficiency up to the highest frequencies. The units themselves are completely impregnated and sealed with a special non-hygroscopic sealing compound, thus preventing moisture penetration under the most humid conditions.

Type MM

An extremely popular type of condenser due to its exceptional high quality and midget size. Hermetically sealed in a small metal case and scientifically vented, to protect against adverse operating conditions of voltage, temperature and humidity. Container is insulated by a high grade tube which is spun over the ends of the can to eliminate shorts when wires are bent close to container. Easily mounted by their rigid wire leads.

Type SM

Type "SM" units are embedded in a high temperature wax and then sealed in a thoroughly impregnated cardboard tube, affording complete immunity to moisture penetration. New high voltage formation gives complete protection against surges and high peak voltages. The addition of the strap mounting bracket has proved favorable in its use due to its wide application in AC-DC and portable sets in the replacement field. The strap can be moved to the best mounting position and then bolted or soldered. Supplied with color-coded, Underwriters' Approved, rubber covered leads.

RADIO INTERFERENCE ELIMINATORS

INDUSTRIAL CONDENSER CORP. has made a special study of the suppression of noises caused by fluorescent lighting. No. 7249 capacitor is designed with three leads, two leads to be connected across the 110 volt line and the single lead to be grounded. No. 4219 is housed in a metal container and is self grounding. It is supplied with strap mounting for easy installation. No. 4252 is a flat type unit designed to mount on the ballast support of circline ballasts. The convenient mounting flap grounds the unit when the stem of the lamp is placed through the mounting hole.

EL-MENCO CAPACITORS

TELEVISION • TRANSMITTING • INDUSTRIAL HIGH VOLTAGE MICA CAPACITORS

DC WORKING VOLTAGES: FROM 1000 TO 3000 VOLTS

Molded in CM-20, CM-35, and CM-40 Cases

Demand for smaller units in higher voltages designed to meet the requirements for TELEVISION, POWER AMPLIFIERS, LOW POWER TRANSMITTERS, and various INDUSTRIAL USES has increased. EL-MENCO designed and produced units listed below are especially adaptable to compact circuits where space is an important factor. Their acceptance has been overwhelming by the various manufacturers of TELEVISION RECEIVERS.

In many cases, these units will do the work of capacitors molded in CM-45, CM-50, and CM-55 cases without breaking down. NO SPECIAL MOUNTINGS ARE NECESSARY; just wire right into the circuit.

The capacitors are molded in low-loss bakelite and tested at double the branded voltage. They are tested for dielectric strength, insulation resistance, temperature coefficient, capacitance drift, susceptibility to humidity, and length of life, according to RCM Standards. All units are wax-dipped for protection against salt water immersion.

STEATITE CASE

El-Menco CP type paper tubular capacitors are sealed into Steatite Ceramic Tubes which serve to insulate the capacitor electrically as well as against moisture and heat. The capacitor insert is impregnated with Mineral Oil, thereby assuring long life at 85° C operating conditions. This feature insures successful operation at the high ambient temperatures existing in small, compact enclosures.

The Non-Inductively wound paper and foil units are sealed in the Ceramic Tubes by means of baked Synthetic Resin End Fills which cannot melt at any conceivable operating temperature. The end fills will not dissolve in wax, permitting the capacitors to be potted without damage to the insert. Leads are of tinned copper wire 2¼″ long.

Many of the large Television, Transmitter and High Voltage Amplifier manufacturers have found these capacitors to be of highest quality. Breakdown tests have exceeded the required standards.

TYPE 46 TRIMMER

The base is made of the lowest dielectric loss ceramic material available and the mica is clear India Ruby.

The soldering lugs may be bent in any position without affecting capacity setting due to the rigid construction of adjusting plates.

El-Menco Trimming Condensers are treated for resistance to humidity and for permanence of capacity setting.

Trimmers shown here are standard sizes and capacities.

ERIE CERAMICONS* are small fixed capacitors consisting essentially of a ceramic dielectric with silver electrodes which are fired on at a very high temperature. Erie Ceramicons are outstanding because of their excellent high frequency characteristics, small size, rugged construction and availability in a wide range of capacity values.

"GP" GENERAL PURPOSE CERAMICONS are ideally suited for such applications as coupling and by-passing, in circuits where temperature coefficient is not important—in other words for all receiver applications *except* in frequency determining circuits. Working voltage—500 volts D. C. Use Erie "GP" Ceramicons as replacements for molded mica and paper tubular capacitors.

NPO Zero Temperature Coefficient CERAMICONS®

NPO zero temperature coefficient Ceramicons are highly recommended for frequency determining applications where no capacity change with change in temperature is desired. "Q" for NPO Ceramicons above 30 mmf is 1000 or higher. Below 30 mmf "Q" decreases slightly as capacity decreases. Working voltage—500 volts D.C. Can be used as replacements for silver mica condensers.

ERIE STAND-OFF CERAMICONS

STYLE 324

Stand-off Ceramicons, an original Erie development, are now widely used for the dual purposes of by-passing R. F. current to ground, and of mechanically supporting other circuit elements. They are especially suited for V.H.F. and U.H.F. applications, due to their low-inductance electrical paths and resultant high resonant frequency.

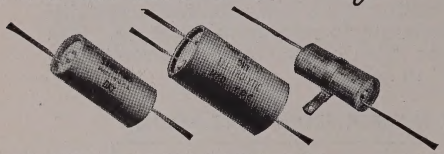
SANGAMO CAPACITORS

ELECTROLYTIC CAPACITORS

TYPE MT-MTD-MTH *Chieftain*



SANGAMO Type MT "Chieftain" electrolytics are especially designed for television and other electronic applications where operation at 85°C. temperatures is required. They are hermetically sealed in round aluminum containers which are encased in heavy insulating sleeves on which polarity is clearly indicated. Being small in physical size they are most popular where mounting in limited space is required — They will fit anywhere and can be mounted in almost any position. Double-thick paper spacers assure adequate breakdown characteristics and all sections are tightly held in place within the container. Multiple staking connects the terminal tabs to the electrodes and provides permanent low resistance contact throughout the life of the capacitor. Low voltage units utilize etched cathodes to maintain uniform capacity when they are subjected to combined conditions of heat and high ripple currents.

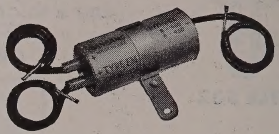
TYPE FM *Arrowhead*



The SANGAMO Type FM "Arrowhead" electrolytic capacitors are similar in design to the Type MT "Chieftain" in every respect except leads. The Type FM is equipped with flexible, insulated wire leads and stud terminals eliminating the problem of crossed wires and the necessity for the use of insulating sleeves. They are much smaller than the wax-end filled types with insulated leads. The capacitors themselves are housed in round aluminum containers which are encased in heavy insulating sleeves, and they are especially designed for the rugged television requirements where 85°C. operating temperatures are encountered.

SANGAMO CAPACITORS

ELECTROLYTIC CAPACITORS

TYPE PL *Warrior*

SANGAMO
DRY ELECTROLYTIC
MADE IN U.S.A.

The SANGAMO Type PL "Warrior" electrolytic capacitors are specially designed for all television and electronic applications requiring long life and dependable performance at 85°C under conditions of extreme ripple currents and high surge voltages. They are sealed in round aluminum cans and have twist-prong tabs for washer or direct chassis mounting. These terminal tabs are securely clamped and staked to the terminal lugs, providing permanent, low resistance connections. In all cases the aluminum can is negative and the mounting rings provides the negative electrical connection.

The Type PL has been especially engineered for the rigid TV replacement applications found in all of the leading television receivers manufactured in the industry.

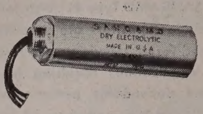
COLOR CODE OF WIRE LEADS FOR TYPES CS, AND SL CAPACITORS

Black...Common negative
Orange...........................Positive, highest voltage or capacity
Red..........................Positive, next highest voltage or capacity
Blue..........................Positive, next highest voltage or capacity
Yellow........................Positive, next highest voltage or capacity
Brown............................Negative, in separate section unit

NOTE: Lead colors are determined by the rated working voltages. Where there are two or more sections of different voltages and the same capacity, the lead color will be determined by the voltage; with the same voltages and unequal capacities the lower capacity takes the next color in the sequence. If there are two sections with equal capacities and voltages the two lead wires will be in the same color.

NOTE: Based upon proposed R.M.A. Color code.

TYPE SL *Mohican*



Designed primarily as replacements for wet electrolytics, the Type SL electrolytic capacitors are assembled in round aluminum cans with threaded necks providing easy mounting to a chassis with the aid of a palnut which is supplied. The Type SL is completely insulated from the container, the negative connection being made to one of the insulated leads extending through the threaded neck of the can.

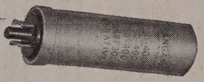
TYPE TS *Cherokee*



Ideally suited for all applications where quick capacitor changes are required, the SANGAMO Type TS units are equipped with a four-pin octal base mounting for use with standard octal base tube sockets. The special design of the bakelite octal base insures that the aluminum container will not contact the mounting surface and the connections to the brass pin terminals are imbedded in this bakelite base. The base pins are nickel-plated to prevent corrosion and resultant poor contact with the socket terminals.

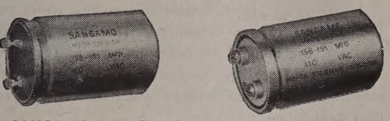
SANGAMO CAPACITORS

ELECTROLYTIC CAPACITORS TYPE EM (MOTOR STARTING)

Trailblazer



The SANGAMO Type EM electrolytic capacitor is a standard universal replacement for all motor starter types presently in use, and its dimensions are comparable in every respect. The Type EML is provided with solder lug terminals, the Type EMS being equipped with screw types; otherwise the two units are identical in construction and operational characteristics. Insulating tubes are supplied with both types.

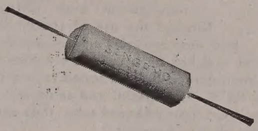
PAPER CAPACITORS

Redskin

PLASTIC MOLDED TUBULAR



The SANGAMO "Redskin" is molded in a hard-thermosetting plastic providing more stable capacity values, excellent seal characteristics, and satisfactory operation up to 85°C. temperature. Small in physical size, and rugged in construction, this pioneer tubular is especially adaptable to television, auto radio, small AC-DC set, and other uses. The leads are firmly imbedded in the hard plastic case and have been especially designed to resist breakage. The "Redskin" assures operating dependability under extremes of heat, humidity and physical stress.

SANGAMO CAPACITORS

PAPER CAPACITORS

TYPE 13 *Sioux*

The SANGAMO "Sioux" paper tubular capacitor has been specifically designed for television applications where long, dependable and trouble-free service is required in high voltage applications. Through the use of special sealing materials and new construction techniques the use of wax as a filler and seal has been completely eliminated. They are mineral oil impregnated and designed to withstand continuous operation at 85°C. The special end seals will not crack, melt, or peel away from the cardboard tube, thus excluding moisture over long periods of operation.

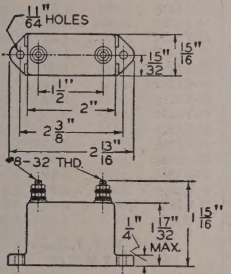
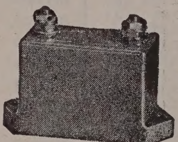
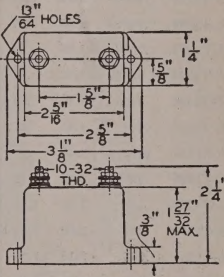
TYPES F1 AND F2 MICA CAPACITORS



TYPE F1





TYPE F2

Types F1 and F2 capacitors, the smallest of the Sangamo line of transmitting types, possess a range of voltage and current ratings suitable for many applications. They are housed in low loss molded bakelite cases. The mica and foil sections are permanently clamped, vacuum impregnated, and installed in the case in such a manner as to provide stable characteristics and adequate moisture proofing.

Type G ceramic cased capacitors are intended for service where highest voltage and R.F. current ratings are required, such as in commercial transmitting or induction heating applications. All possible steps are taken in design and manufacturing operations to insure permanence of quality. Current ratings of these four sizes as well as detailed information on the Type G5 will be supplied upon request. Terminal plates are designed to permit any usual connecting or mounting practices.

CERAMIC CAPACITORS

More and more modern circuits specify "permanent" ceramic capacitors . . . designed and produced under Centralab's exclusive methods . . . making them "safest for servicing" for most electronic applications. Reliable performance, proved where older capacitor types do not last. Install them throughout radio or TV receiver circuits and your "call backs" or repeat calls for capacitor failure on the same jobs will decrease. Centralab ceramic capacitors mean more satisfied customers for you and more profits from your service calls.

TC TEMPERATURE COMPENSATING TUBULARS

Designed especially to limit frequency drift in r. f. circuits where temperature variations are prevalent. These capacitors are constructed with a ceramic body which changes capacitance as the temperature varies. Use Centralab T.C. Hi-Kaps when servicing superhet receivers—replace older types in oscillator and detector circuits in TV, AM and FM receivers. TCZ units are negative-positive-zero (NPO) type. TCN units are temperature compensating, N750 type, giving a negative change of 750 parts per million per degree C. Packaged singly, including instructions. 1,200 volts D.C. test; 600 volts D.C. working.

PRINTED ELECTRONIC CIRCUITS (P. E. C.)

Since their introduction a few short years ago, Centralab printed electronic circuits have skyrocketed in popularity. First developed for the manufacturing trade, increasing demand from the industry at large brought about a line of stock P. E. C. items for servicemen, hams and laboratory experimenters. Printed electronic circuits consist of capacitors and resistors, including the use of pure metallic silver fired to Ceramic-X plates . . . with integral "printed" circuit connections, brought out to convenient external leads which are anchored mechanically. The complete unit is protected with a moisture-proof phenolic coating. The result is a unit group of components of ultra compactness and permanence. No other modern development in electronic circuitry offers so many advantages in low powered applications as regards small size, low cost assembly and utmost reliability. A complete P. E. C. replacement guide is available FREE at any Centralab Distributor.

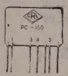
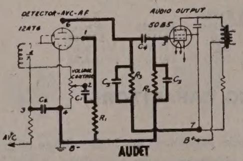
AUDET—P. E. C. OUTPUT STAGE FOR A.C.-D.C. RECEIVERS



AUDET is a compact (1⅝" x ⅞" x 11/64"), highly efficient and dependable audio-detector plate with 7 leads, furnishing the values of all components generally found in the output stage of 5 tube A.C.-D.C. radio receivers. Where trouble develops in this part of a set, it is simple and economical to replace the entire stage with AUDET. The values of the components may differ slightly from the original circuit, but the slight difference may be overlooked as no noticeable change in performance will be noted.

With only 7 leads, you have installed 8 modern components—3 resistors and 5 capacitors—an economical repair.



Audet P. E. C. also will find application in other types of miniature or portable equipment where size and weight are prime factors. Capacitors, 450 V.D.C.W. Resistors, 1/5 watt.

TELEVISION H-PADS FOR ATTENUATION OF SIGNAL STRENGTH

These handy Centralab P. E. C. units are specially designed for use in television antenna installations where signal strength needs attenuation to secure optimum performance. The proper H-Pad, in many instances will match the signal strength to the requirements of the receiver. This can prevent overloading, can eliminate tearing of the image, and improve both audio and video results. They are especially valuable where the television set is located too close to the broadcast station. In connection with a switching arrangement, they are helpful in balancing signals from stations which, because of high power or location, are too strong in relation to other stations. H-pads also are useful in matching impedance between the antenna and the receiver.

The H-Pad has four terminals, and is for installation in series with the standard 300 ohm antenna. Full directions are included.

Size—1¼" x 13/16" x 3/16" thick.

Terminals—Solder terminals, 9/32" long.

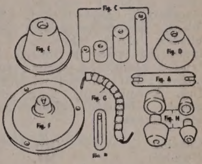
STEATITE



Centralab has been producing fine ceramics since 1928 . . . primarily for its own use in fixed resistors, ceramic capacitors, switches—and more recently, printed electronic circuits. Often called upon by other manufacturers to produce many "standard" and custom designs, some very intricate, Centralab is the only ceramic manufacturer capable of producing many of these in quantity. All items listed are Grade L-5 Steatite, approved without limitation for Army and Navy use.

Characteristics: Uniform, white appearance, high dielectric strength, exceedingly low loss at high frequencies, and strong mechanically. Impervious to moisture and common acids, will not warp, withstands high temperatures; harder than hardest quartz.

"ILLINI-HYCAPS"

Through careful selection of high temperature sealing compounds and superior engineering design, these completely hermetically sealed, compact tubular electrolytic condensers are the acme of dependability. They operate efficiently under high temperatures and will give long life under all climatic conditions.

The small size and convenient mounting features of our type IHC "ILLINI-HYCAPS" make them popular in both manufacturing and replacement work.

Leads are color coded and securely anchored in the hard wax seal. Dual units have four leads for universal replacement work and are completely insulated.

ILLINOIS CONDENSERS
TIME TESTED QUALITY

ILLINOIS CONDENSER COMPANY • 1616 N. THROOP STREET, CHICAGO 22, ILL.

"ILLINI-HYCAPS" are now manufactured in a new and modern plant designed especially for the manufacture of capacitors. Our thorough engineering, plus old manufacturing skills and a rigid policy of quality control enables us to produce a product that is of unexcelled quality.

"ILLINI-HYCAPS" are again available, and you will agree after using them that they meet every requirement a superior condenser should have for long life and dependable service.

"ILLINI-HYCAPS" are guaranteed unconditionally for a period of one year, from date of purchase.

1. Short proof — ample separation of foils by highest purity cellulose separator plus tough anodic film — will withstand the highest surge voltages.
2. Condenser hermetically sealed and anchored in an aluminum shell. Completely resistant to changes due to temperature and humidity. Built to withstand all kinds of vibrations and shocks.
3. Attractive kraft tube spun over condenser ends . . . prevents shorting of pig tail leads to condenser or other components. Aluminum lock-washers hold leads securely in place, will not loosen or break off.
4. Low power factor, low leakage, excellent shelf life.
5. Extremely longer life — due to our use of C. P. chemicals and highest purity foils and insulation materials available. A balanced non-corrosive electrolyte contributes to quiet, stable operation.

Type UMP

FOR *TELEVISION,* RADIO, ELECTRONICS

Illinois standard, twist prong mounting condensers offer a wider range of voltage and capacity types than have heretofore been possible in units of comparable size. They are designed to give maximum efficiency, both in operating characteristics and ease of mounting and wiring.

The electrical characteristics of our type UMP are superb. Capacities are always plus. This, coupled with low power factor and low leakage, makes them ideal for use in all electronic circuits.

Units are hermetically sealed in seamless drawn aluminum cans. Mounting and soldering lugs are sturdy and heavily tinned. Cathode tabs are electrically welded to mounting ring. Each unit is vibration proof—and they will stand up in any climate.

Arranged in a variety of can sizes and capacity combinations, the attached listing represents the majority of condenser types in use today.

ALUMINUM CAN CONDENSERS

Type LN aluminum can condensers are manufactured to operate satisfactorily under the severest conditions. Units are completely sealed in an inner impregnated tube then resealed. Correct design has allowed for maximum heat dissipation with resultant ability of the condensers to operate at higher temperatures and higher voltage surges.

Separate negative and positive leads for each section for universal replacement work. Palnut furnished with each condenser, individually packaged in attractive, varnished outer box. These units are ideal for long life and continuous service.

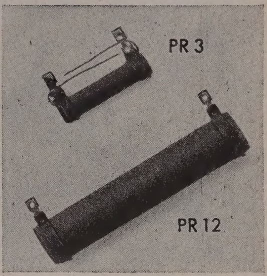
WIRT WIRE WOUND FIXED RESISTORS

WIRE WOUND FIXED RESISTORS



To satisfy the most exacting needs of the Radio and Electronic Industries, Wirt Fixed Wire-wound Resistors are regularly furnished in PHENOCOTE protective coatings, developed and steadily improved over a period of many years in the Wirt Laboratories. The resistor wire is space wound on low loss ceramic tubes. The PHENOCOTE covering is an exclusive organic cement coating offering maximum protection to the resistance winding against the detrimental effects of moisture, humidity and electrolysis. Absolutely inert chemically, it will not effect the most delicate windings. It is particularly recommended for fine wire sizes and all applications where the maximum temperature of the unit will not exceed 300° F. These Resistors are universally used in the Radio, Electronic, Instrument, Public Address and Test Equipment fields.

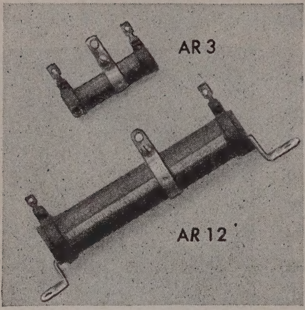
WIRE WOUND ADJUSTABLE RESISTORS



WIRE WOUND ADJUSTABLE RESISTORS

WIRT Adjustable Resistors are space wound on low loss ceramic tubes to which the resistance wire is bonded, resulting in dependability and long life. Protection of the windings is afforded by the PHENOCOTE covering which is described fully on the preceeding page. One adjustable Slider Band, screw driver type, is furnished as standard. Bakelite knob type bands can be furnished on special order at slightly higher prices as shown below. These bands are made with small contact buttons located on the inside of the band so that a number of taps may be made without shorting out excessive resistance.

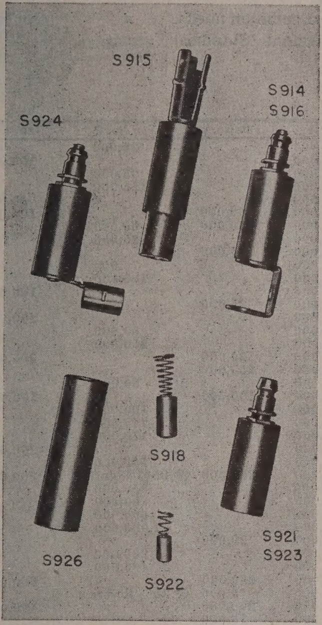
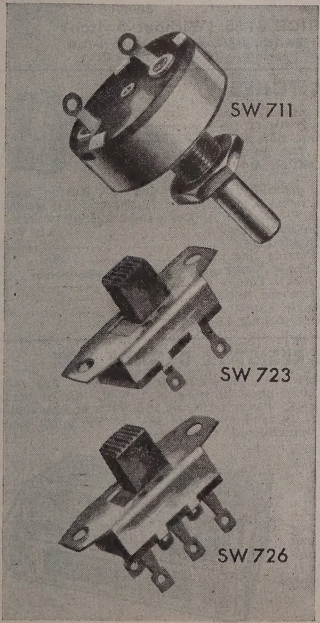
WIRT SUPPRESSORS and SWITCHES





AUTO RADIO IGNITION SUPPRESSORS

Wirt Suppressors are made with moulded black bakelite housings. All metal parts are made of rugged unfinished brass. Terminals are securely fastened to casings and sealed with special moisture and heat resisting dielectric cement. Resistor pills are sprayed with zinc and then double impregnated with a special moisture-proofing compound. Resistance value of all standard types is 10000 ohms ±20%; for FV8 types 50000 ohms ±20%. The distributed capacity is less than 1.5 mmf. Resistance values will not change more than 7% after being submerged in water for 100 hours. Test by sparking 1800 times per minute at 10,000 volts for 100 hours produces resistance change of not more than 3%. Wirt Suppressors are impervious to heat, oil, moisture and mild acids, and will not change in resistance more than 10% in 50,000 miles of operation.

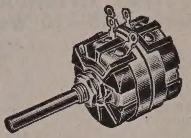
CONSTANT IMPEDANCE CONTROLS

★ Self-compensating volume controls or attenuators known as L-pads and T-pads are essential in eliminating the distortion that arises from the mismatching of impedances in broadcast transmission, sound recording or public address systems. With Clarostat constant-impedance L-pads and T-pads the input and output impedances of associated equipment in a circuit can be kept within the limits of a constant required value.



These pads have a continuous range from 0.5 to 30 decibels attenuation in 90% of rotation, the last 10% affording infinite attenuation. Employable at either the source or the load in a circuit (see diagrams) these units are readily one-hole mounted. They afford a wide range of uses as mixers, faders, multiple-speaker controls, etc. Such controls can be used as individual volume controls for multiple-speaker systems, without affecting or changing the source impedance.

These units are rated at 2½ watts when used on DC or constant frequency signals. However, they have successfully been used up to 10 watts on audio circuits.

GREENOHM JR. WIRE-WOUND RESISTORS

★ Handy, inexpensive, ceramic-cased midget wire-wound resistors for tight spots, especially with point-to-point wiring. These tiny resistors take the place of more cumbersome and costlier bracket-mounted units. This "junior" version of the well-known Greenohm power resistors features a wire winding on fibre-glass core, 1½" axial pigtail leads, and a steatite protective casing sealed with exclusive Greenohm cold-setting inorganic cement. This resistor will not blister, crack, or change shape. Type C7GJ, 1¾" long by 5/16" dia., rated at 7 watts. Smaller Type C4GJ, 1" long by 5/16" dia., rated at 4 watts. In characteristic Greenohm green, with printed values on casing.

db steps are 3, 6, 9, 12, 15, 18, 21, 24 and 30. Absolutely noiseless and distortionless in operation.

★ Developed to meet the need for a constant-impedance attenuator capable of handling considerable power without measurable insertion loss, Series CIB attenuators provide linear attenuation with ample power-handling capacity.

These units are rated at 10 watts when used on DC or constant frequency signals. However, they have successfully been used up to 30 watts on audio circuits.

Compact, capable of safely handling the rated wattages at any setting of the dial, these units are recommended as an output level control for power amplifiers or as an input attenuator for individual or group speakers in a public address system. Linear attenuation is provided in steps of 3 decibels up to 30, with final step to infinity.

Unit is furnished in black baked-enamel metal casing, 2" in diameter by 2¾" long, equipped with dial plate and bar knob. Not available with power switch. One-hole mounting ⅜" diameter bushing. Shaft 1" long.

AUTOMATIC LINE VOLTAGE REGULATORS

★ To maintain constant line voltage and thus prevent burning out the tubes of a radio receiver or other tube-using device, this handy unit, operating effectively on 110-volt A.C. or D.C. by simply plugging into the usual socket or outlet, safeguards against line voltage surges or increases even up to 140 volts. At the normal 110-volt, the resistance of the unit is low and the voltage drop across it is negligible. However, as the line voltage increases the resistance of the unit increases proportionately, with a constant increase in voltage drop across it. This automatic voltage control or ballast action insures a steady, practically constant and always safe operating potential.

Dimensions are 1¾" dia. x 1¾" long.
Prongs ⅝" long.

TUBE-TYPE WIRE-WOUND RESISTORS

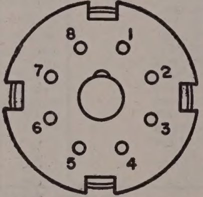
★ Clarostat developed and pioneered the tube-type resistor for voltage-reducing purposes and for supplying needed voltage for pilot lamp operation in AC-DC receivers. Strictly non-inflammable, with the resistance element wound on a mica form firmly secured in the metal tube and connected with the base prongs, the Clarostat construction is notably superior to others.

To simplify servicing of receivers using tube-type resistors, Clarostat has selected the most popular values for so-called Universal numbers serving most replacement needs. Standard resistor tubes of the most popular types are also listed below.

In connection with listings, the following nomenclature applies:
Prefixes: K denotes 6.3 volt 150 ma. No. 40 pilot lamp.
L denotes 6.3 volt 250 ma. No. 46 pilot lamp.
M denotes 6.3 volt 200 ma. No. 51 pilot lamp.

The numeral indicates total voltage drop across resistance unit.

Suffixes designate:
A—No pilot lamp taps.
B—1 pilot lamp tap for 1 lamp.
C —1 pilot lamp tap for 2 lamps.
D —2 pilot lamp taps for 2 lamps.
E —3 pilot lamp taps for 3 lamps.
E1—1 pilot lamp tap for 3 lamps.
F —1 pilot lamp tap for 1 lamp.
G —1 pilot lamp tap for 2 pilot lamps. (Tapped sections isolated from main reducing body.)
H —2 pilot lamp taps for 2 pilot lamps. (Tapped section isolated from main reducing body.)



The letter "J" following any of the suffixes denotes a shorted connection between 2 prongs of the tube, i.e., K-67-BJ, the short is located between Nos. 3 and 4 prongs.

Care must be exercised when replacing any tube whose number ends in "J", as the shorted pins are not always as in above example. Some are betwen Nos. 6 and 7 prongs, and others between 5 and 3.

When replacing any plug-in resistor tube with a Clarostat Universal type, note prongs missing on replaced tube and cut off corresponding prongs on the Universal Replacement tube.

The numeral indicates total voltage drop across resistance unit.

THE MALLORY MIDGETROL*

Round Shaft Midgetrol

APPLICATION—Recommended for replacement or as an original part, in the audio, tone and similar control circuits of standard home radios, audio radio sets, audio amplifiers, television sets and industrial electronic equipment.

DESCRIPTION—A high quality round shaft carbon control (15/16″ in diameter) to service radio sets requiring small parts. Available in a full line of resistances, tapers, and taps. The special resistance element has ample safety factor for current-carrying ability. New type contact makes control smoothest and quietest on market by laboratory tests. AC-DC accessory power switches, types US26, US26T, US27 and US28 may be quickly and permanently attached to this round shaft Midgetrol without modifying or disturbing the mechanical or electrical characteristics of the control in any manner.

SHAFT DESCRIPTION—Features a new round shaft which is easily cut to any required length by the serviceman. The shaft is machined to the exact dimensions necessary to meet replacement requirements normally encountered by the serviceman.

ACCESSORIES—Two steel shaft and knob adaptors for knurled and push-on knobs, one hex nut.

PACKAGING—One Midgetrol, accessories and instruction sheet per display carton.

DUAL CONCENTRIC MIDGETROL

APPLICATION—Designed specifically to duplicate original equipment controls quickly, easily and economically.

DESCRIPTION—Both the front and rear sections used in making Mallory Dual Concentric controls measure ¹⁵⁄₁₆″ diameter. Front and rear sections are available in a wide range of popular resistances, tapers and taps. By assembling one front and one rear section a complete and fool-proof dual concentric control is easily and quickly made, without special tools or soldering, servicing over 90% of all television and automobile radio sets. The assembled control exactly duplicates the original equipment control with no eccentricity, mechanical binding between inner and outer shafts or wobble between control sections. Standard Midgetrol AC-DC switches, US26, US27, and US28 may be used with the dual concentric Midgetrol without modification. See Page 5. The mounting depth behind the panel for the dual Midgetrol without switch is approximately 1⅛″. With AC-DC switch attached, it is 1⅝″ overall.

SHAFT—DESCRIPTION—Special attention has been given to the elimination of binding or eccentricity between the inner and outer shafts by use of a special bearing surface located on the inner shaft knob ends. The relationship between the extremities of the outer shaft and inner shaft end has been so designed to practically eliminate the necessity of modifying inner shaft end.

ACCESSORIES—Hardware and fittings supplied with each front section include one inner shaft, one bakelite spacer, one coupling cup, and two shaft ends patterned to fit .187 and .202 RTMA standard flatted or split knobs. Rear sections are purchased and packaged separately in individual cartons.

Other Accessories which may be needed occasionally for special set servicing include: DS-35, DS-36, EB-158, EB-214. See this page.

PACKAGING—One front control section plus accessories and complete instructions per display carton. Rear sections packaged individually in display cartons.

More than 10,000 different dual concentric controls can be built from Mallory Midgetrol parts—see switch and shaft recommendations listed by part number in the Second Edition Mallory Television Service Encyclopedia.

You can further increase the flexibility of your Mallory Midgetrols by using the Universal Extension Shafts and Couplers shown on pages 9 and 10 of this catalog.

- **Meet JAN-R-11 Army-Navy Specification**
- **Low Noise Level; Low Voltage Coefficient**
- **Stamped With Value**

- **High Insulation 1000 volt Breakdown**

Continental's New "CARBOMITE" bakelite insulated carbon composition resistors are now the standard of Electronic components used in the Radio and Electronic Industries. They meet all specifications of the joint Army-Navy-Jan-R-11 including the toughest of all tests the "Salt water immersion cycling." The "CARBOMITE" M type resistor consists of a solid molded carbon core, outer molded bakelite insulated shell and molded in leads. These resistors being well insulated can be mounted side by side or against any metal surface without shorting or grounding. They are recommended where space limits and insulating quality require a rugged reliable and small resistor capable of withstanding severe service. The lead wires are straight and are tinned with a tin composition heavy enough to give instant soldering with the touch of the heated soldering iron tip. The resistor values are easily identified by the bright non-rubbing off color code bands and the white ink stamped numbers of the value on the body of the resistor.

The M2-2 watt, M1-1 watt and the M½-½ watt are made in all the standard preferred RMA values and packed in quantities of 10 or 50 of each value to the box. Order in these quantities or multiples thereof.

Continental's type WM resistors consist of evenly spaced resistance wire encased in a protective bakelite molded shell and are designed so as to preclude the possibility of shorting between turns. The ends of the resistance wire are firmly affixed to the tinned copper terminals. Resistance values below 12 ohms have soldered connections, and values above 12 ohms have pressure type contacts, thus insuring both electrical and mechanical connections. The minimum size wire used is 0.0015 inch.

Type WM resistors are recommended for use in circuits requiring resistance values not ordinarily available in the conventional carbon composition style. They are color coded in accordance with RMA standards.

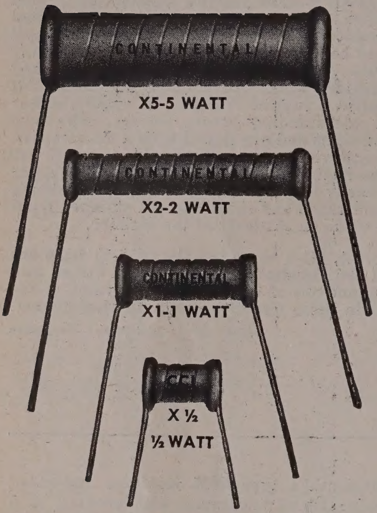
PRECISION RESISTORS

"Nobleloy" X-Type Resistors

Trade Mark Reg.



- **Not Wire Wound**
- **Not carbon!**
- **Stability of Wire Wound and Equivalent**

After several years of research work CONTINENTAL engineers have developed a new resistor involving the metal film principle, having the accuracy of a wire wound unit. Absolutely no carbon whatever is used in the fabrication of these resistors. The metallic resistance film is formed on the surface of a low loss ceramic tube using a patented pyrochemic process.

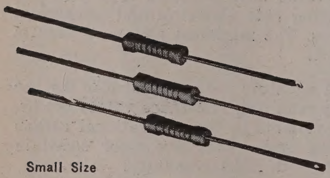
The metal film thus formed is hermetically sealed by a layer of vitreous enamel specially developed and patented by CONTINENTAL. The ceramic tube with its associated film is then spiralled to give a long resistance path and to accurately calibrate the unit to value.

Since the ceramic tubes are hollow they allow a larger surface for heat radiation, thus permitting the resistor to withstand overloads of 200% or better.

The copper-tinned lead terminals are soldered to extremely low resistance metal contact films which in turn are integral with the resistance film, thereby reducing contact resistance to a minimum. This type of construction produces a resistor unit having not only excellent resistance stability but also a negligible noise characteristic.

"NOBLELOY" TYPE NF METAL FILM RESISTORS

Trade Mark



Small Size

- Accurate Fixed Non-Wire Wound
- Metal Film (Not Carbon)
- Axial Leads
- Stability of Wire Wound

A miniature type precision resistor for use in applications calling for initial accuracy and good stability has been developed for the Components and Material branch of the Signal Corps Labs., Fort Monmouth, New Jersey, under contract. This resistor, designated as Continental type NF, employs a Nobleloy film resistance element deposited on a low loss ceramic carrier. The film is protected by a layer of vitreous enamel thus insuring protection against unusual atmospheric conditions. The axial type leads are securely fastened to the ends of the resistor thus assuring positive contact. The resistor is calibrated to value by means of spiralled grooves cut into the film to increase the resistance path. The NF resistor, having good stable characteristics, is particularly adaptable to circuits requiring close tolerance, and is recommended for uses where paired composition resistors are now used.

SUPPRESSORS SUPPRESSORS

ALL SPARK PLUG SUPPRESSORS AND DISTRIBUTOR SUPPRESSORS EACH LIST PRICE $0.30

CONTINENTAL SUPPRESSORS have been subjected to years of laboratory development and actual road service. They effectively remove noise interference from spark discharge at the plugs and high-tension distributor—yet do not in any way affect the motor car ignition system.

They have mechanical strength to stand the most severe service. The resistance value of 10,000 ohms has been scientifically determined. Sparking across the terminals is eliminated by careful shaping of the electrodes and cases.

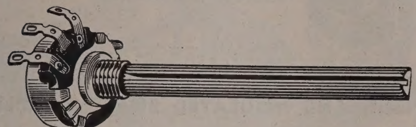
VOLUME CONTROLS

Preferred for Performance

NEW TYPE Q



RADIO TECHNICIAN'S VOLUME CONTROL

A new volume control engineered to meet the needs of modern radio and TV replacement. Compact 15/16″ design is augmented with shorter bushing, only ¼″ in length. This tiny control will meet all small set requirements, and yet is capable of handling large receiver replacements. "Cushioned turn" rotation and quiet element combine to provide a modern control of the highest quality.

KNOB MASTER FIXED SHAFT. This is the standard Q shaft. It is a FIXED shaft, and handles most knob requirements. Knurled, flatted and slotted, it fits knurled and spring-type push-on knobs or set-screw knobs. 3″ long with ample cross-section to prevent bending.

INTERCHANGEABLE FIXED SHAFTS. Quick replacement of standard fixed shaft to fit any of 13 Interchangeable Fixed Shafts provides ready conversion to "specials." This revolutionary feature is made easy by the new IRC Resilient Retainer Ring. These special FIXED Shafts offer all of the advantages of Tap-in Shafts with the added security of fixed shafts. Widest replacement coverage is made possible with a minimum stock. These special shafts are illustrated and explained on the following page.

5 STANDARD TAPERS

A—Used as potentiometer or rheostat in any circuit where uniform resistance change is required.

B—A semi-logarithmic curve used as tone control or audio circuit control.

C—A logarithmic curve. Used as audio circuit control or antenna shunt control.

D—Tapered at both ends to provide control of grid bias and antenna circuit. Used where control of grid bias is of prime importance in controlling volume.

H—A tapped logarithmic curve used as audio level control for automatic bass compensation.

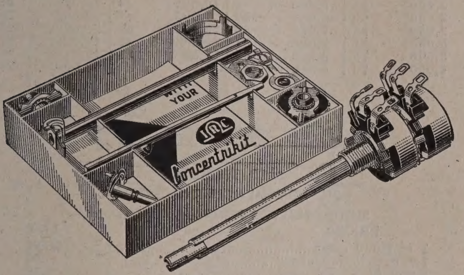
Concentrikit
FOR CONCENTRIC DUALS

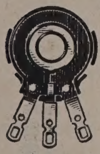


New IRC CONCENTRIKIT is a set of specially designed parts with which radio technicians can assemble a great variety of concentric dual controls. The great majority of all concentric dual controls in auto radios, home receivers and TV sets can be readily replaced with CONCENTRIKIT. Searches and waits for exact duplicates are eliminated, and shop inventories reduced.

Each CONCENTRIKIT contains 11 IRC universal parts. These are factory-packed as shown above. Step-by-step assembly instructions are included in each kit. In addition to basic parts in the kit, 2 IRC Base-Elements and 1 Shaft End are required. Shown in the column below, these are purchased separately—thus you save, by buying only the parts needed.

Type K1 CONCENTRIKIT..............................LIST $2.75

BASE-ELEMENTS FOR CONCENTRIKIT



Two IRC Base-Element Assemblies are required for each concentric dual. These are available in a wide assortment of resistance values, tapers and taps, as shown in the next column. IRC Base-Elements are a revolutionary advance in concentric dual replacement. Each unit is a complete blue molded base with element, terminals and collector ring installed. No loose parts.

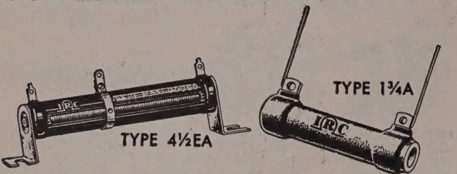
POWER RESISTORS

Preferred for Performance

IRC FIXED AND ADJUSTABLE POWER WIRE WOUND RESISTORS



IRC Power Wire Wounds are rugged resistors specially engineered for dependable heavy duty performance. They are full size, thus continuous operation at full rated power can be maintained. Derating is unnecessary. Special dark, rough coating is noted for its rapid heat dissipation, and protection against humidity. Operating temperatures are lower, thus assuring long life.

All terminals are hot tin dipped for easy soldering. 10 and 20 watt sizes use combination lead and lug terminal from which lugs may be cut for tight space applications. Clear, permanent markings show type, size, watts and resistance. Tolerances: Fixed Types—standard ± 5% for 50 ohms and over, ± 10% below 50 ohms. Adjustable Types—standard ± 10%.

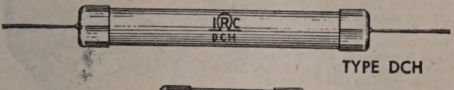
CLOSE TOLERANCE PRECISTORS



TYPE DCH

TYPE DCF

New IRC PRECISTORS are deposited carbon precision resistors offering a unique combination of close tolerance, stability and economy. Pure crystalline carbon is bonded to selected ceramic cores producing a resistor ideally suited to the requirements of instrumentation, advanced electronics and critical television circuits. Guaranteed accuracy ± 1%. Relation between accuracy and load as follows.

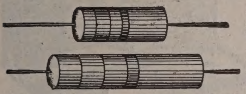
INSULATED CHOKES



IRC Insulated Chokes are available in two sizes designated as types CLA and CL-1. Both types are fully insulated in molded phenolic housings for full protection against high humidity. The insulated housing also guards the winding from abrasion and physical damage, and prevents any possibility of shorting to chassis. Color coded for easy identification.

The wide range of size and characteristic combinations available permits accurate replacement with respect to space and electrical requirements.

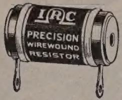
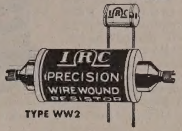
WIRE WOUND PRECISIONS



TYPES WW3, WW4, WW5

TYPE WW10



TYPE WW2

IRC Precision Wire Wound Resistors are scientifically designed and constructed of the highest quality materials to combine the utmost in accuracy and dependability. Winding forms are of non-hygroscopic ceramic having high insulation qualities, high mechanical strength, and low-coefficient of expansion.

Minimum temperature coefficient of .0025% per degree C. is standard on all IRC Wire Wound Precisions at no extra cost.

1% accuracy is standard. For closer tolerances add to prices below: 10% for ½% tolerance; 15% for ¼% tolerance; 25% for 1/10 of 1% tolerance.

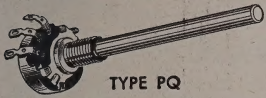
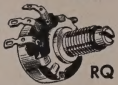
SPECIAL PURPOSE CONTROLS FOR INDUSTRY

TYPE PQ AND RQ

DISTRIBUTOR CONTROLS FOR INDUSTRY



TYPE PQ



RQ

IRC Distributor Controls for Industry offer commercial users a wide selection of resistance values and two industrial shaft types. Shafts are fixed. This combination of wide selection of values and speedy Distributor delivery holds many advantages for industrial purchasers. These Industrial Controls are adaptations of the new, compact 15/16″ Q Control. Power rating is ½ watt, 500 volts maximum. Electrical rotation is the same with or without switch. ⅜″ bushing is brass and held to close tolerance for snug shaft fit.

Terminals are heavily tinned for easy soldering, and may be bent without becoming noisy. Two locating lugs are provided, either or both of which may be bent down if not needed. Molded base. Both Types PQ and RQ are supplied in standard tapers.

TYPE PQ. Full round ¼″ shaft, approximately 3″ from mounting face, with ⅜″ long bushing. 19 stock values and 13 additional ranges as shown below. Regular IRC stock numbers are used with prefix PQ.
List $1.25

TYPE RQ. Very short screw-driver slot shaft, ¼″ diameter and approximately ½″ long from mounting face with ⅜″ long bushing. Available in 32 values as shown. Regular IRC stock numbers are used with prefix RQ.

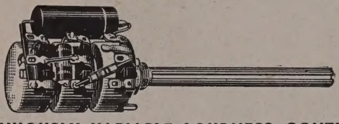
TYPE LCI



CONTINUOUSLY VARIABLE LOUDNESS CONTROLS

IRC Type LCI Continuously Variable Loudness Controls actually bring high fidelity tone to commercial audio systems—even at whisper level! They can be used economically to improve the sound quality of many radio, TV, and FM receivers, as well as sound systems. And they are as easily installed in most audio systems as an ordinary volume control.

Only three connections are needed to install the new Type LCI Loudness Control. No special taps or complicated circuits are required. Type LCI's eliminate the need for tapped volume controls, stepped-type loudness controls, bass and treble boost circuits. Type LCI's do what these other devices have failed to do. With LCI's, highs and lows are boosted automatically as volume is decreased — depth and brilliance of tone are maintained without multiple adjustments.

ASSEMBLE YOUR OWN LOUDNESS CONTROL WITH SIMPLE, STANDARD PARTS

The new IRC Loudness Control is readily assembled in a short time with a standard IRC Type Q Volume Control and two IRC MULTISECTIONS. The MULTISECTIONS are rear control sections, so designed that they may be added to Type Q Controls or to other MULTISECTIONS in the same manner as switches. Simple assembly instructions are included with each MULTISECTION. Pictorial schematic of assembled unit is shown at left.

To assemble the Loudness Control, simply add to the "Q" Control the two specified MULTISECTIONS, in the order shown by schematic, using instructions included with each. Assemble the additional parts and make and solder all required connections as shown. Cut shaft to required length. Install and wire into any high gain audio amplifier. Parts needed are shown in the pictorial schematic in the following order:—

1. IRC Type Q Control—Q11-133
2. IRC MULTISECTION—M13-137

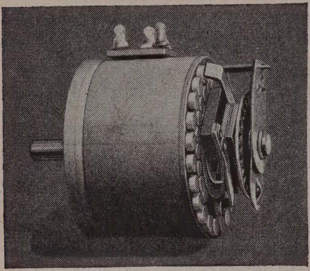
SHALLCROSS AUDIO ATTENUATORS



SHALLCROSS ATTENUATOR NO. 420-2B2

These Shallcross Features Mean

✓ BETTER PERFORMANCE

✓ BIGGER VALUE

- ✓ Off position attenuation well in excess of 100 db.
- ✓ 25% to 50% fewer soldered joints.
- ✓ Noise level ratings that are factual. (130 db or more below zero level).
- ✓ Non-inductive Shallcross precision resistors used throughout assure flat attenuation to and beyond 30 kc.
- ✓ Types and sizes engineered for all needs. Attenuation accuracies of 1%, resistor accuracies of 0.1%, on special order.

Shallcross Audio Attenuators are available in either variable or fixed units, the former often being referred to as a "control" and the latter, as a "pad".

Controls are available with as few as 5 steps or as many as 52 steps with an attenuation as small as 0.1 db per step. The total attenuation for a single control does not exceed about 125 db since such high attenuation approaches the noise level of the switching mechanism.

The complete story of Shallcross attenuators may be found in Shallcross Engineering Bulletin #4, copies of which are available on request. Specifications and prices are given below for a few of the most popular variable attenuators.

IMPEDANCE: 150, 500, 250/500, 600 ohms, except potentiometers, which are 100,000 and 250,000 ohms.

RESISTORS: All non-inductively wirewound, ±5% tolerance, except types preceded with "C", which are composition selected to ±5%.

ATTENUATION: Increases for counter-clockwise rotation of knob end of shaft.

FREQUENCY RESPONSE: Flat over entire audio range.

SWITCH MECHANISM: Multi-leaf wiper arms, collector rings and contacts available in tarnish resistant silver alloy or brass. Noise level −130 db.

DETENT: Indexing mechanism available on any unit for $0.75 list. Back of panel depth is then increased 5/16″.

DIALS: $1.50 list each additional.

In addition to the popular standard types listed here, Shallcross Akra-Ohm Resistors are made in a complete line of standard and special designs for precise electronic equipment demanding great stability and long life even under difficult conditions of temperature and humidity.

Shallcross achievements include the development of really practical hermetically-sealed units; BX processed resistors "tropicalized" against moisture and fungus; the use of spun glass insulated wire for applications where considerable power must be dissipated; bifilar wound resistors, 1000 ohms or less, for exacting instrument use; heavy-duty surge resistors; accurate heavy-duty power resistors, and various others. Write for Shallcross resistor bulletin R3-B for complete information.

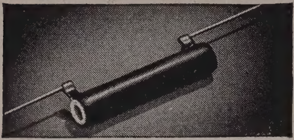
Popular OHMITE "BROWN DEVIL" RESISTORS



High quality, small size, wire-wound resistors ideal for voltage dropping, bias units, bleeders, etc. They're extra-sturdy, all-ceramic, vitreous enameled. They give time-proved protection against shock, vibration, heat and humidity. Their long record of continuous trouble-free service—their wide use in all climates of the world—prove their complete reliability and economy. All units can be conveniently mounted by means of their 1½" tinned wire leads. The standard resistance tolerance is ±10%.

The all-welded construction of the 5 watt unit makes it possible to extend the resistance range to 10,000 ohms, an unusually high value for a vitreous enameled stock unit.

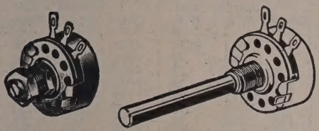
2 WATT MOLDED COMPOSITION POTENTIOMETER—TYPE AB



The Type AB Potentiometer is an exceptionally high quality unit designed especially for industrial, laboratory, radio service and other uses where reliability is particularly important. Because the resistor element is molded, the unit has an exceptionally large safety factor. The power rating of 2 watts is unusual for a unit of such small size. The unit has a very low noise level and low voltage coefficient. It will pass the Army-Navy 200 hour salt spray test, specification AN-QQ-S-91. The unit is 1-1/16″ diameter and extends 9/16″ behind the panel. The 2″ long round shaft (including the ⅜″ long mounting bushing) is available from stock on potentiometers with all three resistance tapers. The screwdriver shaft with locking-nut is available from stock on the linear taper units only. A SPST switch, to be attached to the back of the control, can be supplied extra.

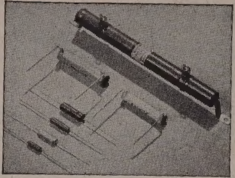
OHMITE R.F. PLATE CHOKES



This series of seven Ohmite single layer wound solenoid radio frequency plate chokes covers the entire frequency range of 3 to 520 megacycles. The four highest frequency chokes are wound on low power factor plastic cores while the other three units are wound on steatite tubes. Windings are insulated and protected by a moisture-proof coating. The single layer winding is designed to avoid adverse harmonic effects within the recommended operating range and also prevents breakdown from high r.f. potentials.

OHMITE POWER LINE CHOKES

Prevents high-frequency currents of radio transmitters, diathermy and therapeutic equipment from going out over the power lines and interfering with nearby radio receiving sets. Used as a filter in connection with two grounding condensers of 0.1 microfarad capacity each. The Z-20 Choke is also used at radio receivers to keep out interference. All chokes consist of two single-layer windings on a single ceramic core—insulated and protected by moisture-proof coating. Recommended for use in suppressing radio (not audio) frequency interference.

WARD LEONARD • VITROHM RESISTORS and RHEOSTATS

ADJUSTABLE RESISTORS -- ADJUSTOHMS

Adjustohm Resistors are for use in any application where it is necessary or desirable to have one or more intermediate resistance values; or in circuits that need to be changed from time to time to meet varying electrical conditions.

Adjustohm Resistors are built of the highest grade low temperature coefficient materials, and are coated with Ward Leonard's tough crazeless Vitreous Enamel.

WATT RATINGS

Nominal watt ratings for Adjustohm Resistors apply when the entire resistor is in the circuit. For most practical purposes the watt rating for each part of the resistor is approximately proportional to the amount of the resistance that is in the circuit.

Mounting brackets are furnished with all Adjustohm Resistors, except the 10-watt size, Type 10A.

Price of resistor includes brackets and one adjustable band.

BALLAST TUBE FOR AUTOMATIC REGULATION OF CURRENT AND VOLTAGE

AUTOMATIC REGULATION

AMPERITE is an automatic rheostat designed to keep the current in a circuit at a definite value, for example, 0.5 amps. ***Should the supply voltage increase, the Amperite will automatically increase in resistance enough to take up the increase in supply voltage—keeping the voltage on the load constant.***
